Welcome to Port Alveridge. You'll notice something quite unusual about its inhabitants. Many of them are cats; and the ones that aren't cats, are dogs. Alveridgea and the Legend of the Lonely Dog is the irresistible tale of a little pup living in this cat-eat-dog world... Another time, another world. Port Alveridge, nestled on the edge of the sparkling Esparrow Sea, is a town divided. Cats and Dogs who once fought ancient battles now live as uneasy neighbours in segregated districts, with the town ruled for the greater good of Felines. Into this hotbed of simmering rivalry steps an orphan hound - Arthur Snout - deposited on the steps of the Alveridge County Orphanage. A small, unhoundish loner, Arthur is bullied by the other houndlings. And their nickname of 'Lonely Dog' soon sticks. Lonely Dog has a special gift, however, a gift for music that crosses boundaries, styles, and even species... Torn from his new rough-and-ready family: from Old Rolph -

orphanage headmaster, father figure and secret music-lover; from a childhood sweetheart - Kelzie, whom Lonely Dog loves more than anything; from Bronson - biker gang leader who protects him - Lonely Dog flees for his life to the hinterlands, where he unwittingly becomes the star of an outlawed late-night pirate radio show. With Bronson jailed and shadowy offshore Feline powers marshalling for a war that threatens to destroy all Hound-kind, Lonely Dog must return to Port Alveridge and face his destiny. Can a shy, reluctant hero - armed with nothing but his 'Houndsound' - change the course of Alveridgean history?

Micro-Hydro Design Manual has grown from Intermediate Technology's field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas, partly to support industries, and partly to provide illumination at night. Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independent micro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff and smaller organizations following less strict regulations and using 'off-the-shelf' components or locally made machinery.

Arc Routing: Theory, Solutions and Applications is about arc traversal and the wide variety of arc routing problems, which has had its foundations in the modern graph theory work of Leonhard Euler. Arc routing methods and computation has become a fundamental optimization concept in operations research and has numerous applications in transportation, telecommunications, manufacturing, the Internet, and many other areas of modern life. The book draws from a variety of sources including the traveling salesman problem (TSP) and graph theory, which are used and studied by operations research, engineers, computer scientists, and mathematicians. In the last ten years or so, there has been extensive coverage of arc routing problems in the research literature, especially from a graph theory perspective; however, the field has not had the benefit of a uniform, systematic treatment. With this book, there is now a single volume that focuses on state-of-the-art exposition of arc routing problems, that explores its graph theoretical foundations, and that presents a number of solution methodologies in a variety of application settings. Moshe Dror has succeeded in working with an elite group of ARC routing scholars to develop the highest quality treatment of the current state-of-the-art in arc routing.

The Airbus A380 is the world's most recognised and most talked about airliner since the Boeing 747 and Concorde appeared in the skies in the late 1960s. Designed to challenge Boeing's monopoly in the large-aircraft market, it made its first flight in April 2005, entering commercial service two years later with Singapore Airlines. This jet has become so popular that every four minutes--24 hours a day, seven days a week--an A380 is taking off or landing somewhere in the world. There is no other development in recent aviation history to rival this remarkable aircraft.

The aim of this book is to help students write mathematics better. Throughout it are large exercise sets well-integrated with the text and varying appropriately from easy to hard. Basic issues are treated, and attention is given to small issues

like not placing a mathematical symbol directly after a punctuation mark. And it provides many examples of what students should think and what they should write and how these two are often not the same.
