Cuba Betrayed, first published in 1962, is an autobiographical work of former Cuban dictator Fulgencio Batista, in which he expresses his viewpoint regarding his two terms as dictator, his defeat, and his successors—Cuba’s “Betrayers.” “The book is not meant to be a literary masterpiece. Still less has there been any attempt at stylistic elegance. It is, rather, an exposition of facts, a narration based on memory and notes.”—Introduction

This book describes an easy to apply methodology to determine the scenic value of a coast. As one of the most critical aspects of beach user choice, the determination of coastal area scenic quality is of primordial importance. This book is, therefore, an extremely useful tool for any coastal lovers, being them users, teachers, researchers, or managers. In particular, this work is the first book to present a semi-quantitative analysis of coastal scenery based on more than 4,000 interviews about people's desired coastal imaginary. Twenty-six parameters can be used to identify any coastal scene, which have then been sub-divided into five attribute categories, weighted and subjected to fuzzy logic mathematics to obtain a decision number (D). This number D represents the coastal scenery at that point, and Five D classes are then presented (from I-excellent, to V-poor). Heritage areas, like National Parks should lie in Class I, which infers top scenic quality. Over a time span of a decade or so, the authors of this book have assessed more than 900 global locations using the technique given in this book. One of the main aims of this method is to point out how scenic areas may be improved by judicious intervention relating to parameters, mainly anthropogenic, chosen for assessment. The content of this book opens perspectives for analysis of the potential for coastal tourism development in natural areas and for landscape quality improvement in current coastal tourist developed areas. "In a very comprehensive way, this book reviews the main concepts about coastal

scenery and through the vast global work experience of the authors, presents different methodologies, as well as introducing a novel methodology, using parameter weightings and fuzzy logic mathematics.” Carlos Pereira da Silva, CICS.NOVA, Universidade Nova de Lisboa, Lisbon, Portugal “Our lives will be greatly enriched by finding beauty, but we can use help in defining the many ways beauty can be manifested. This book can help us by informing us of the ways landscapes can be viewed and described from many viewpoints to place our own understanding in better perspective.” Karl Nordstrom, Geography Department, Rutgers University, New Jersey, USA “How do we define and quantify a coast’s scenic value? This is the book. It begins by defining coastal scenery, then reviews the approaches to quantifying it, followed by a new fuzzy logic approach and examples. It finishes with a chapter on how to manage these attractive landscapes, many of which are being overrun and ruined by development. This is a must read for researchers who wish to evaluate and managers who wish to maintain this valuable yet intangible coastal resource.” Andrew Short, Coastal Studies Unit, Sydney University, Australia

Foundations of Geometry, Second Edition is written to help enrich the education of all mathematics majors and facilitate a smooth transition into more advanced mathematics courses. The text also implements the latest national standards and recommendations regarding geometry for the preparation of high school mathematics teachers--and encourages students to make connections between their college courses and classes they will later teach. This text's coverage begins with Euclid's Elements, lays out a system of axioms for geometry, and then moves on to neutral geometry, Euclidian and hyperbolic geometries from an axiomatic point of view, and then non-Euclidean geometry. Good proof-writing skills are emphasized, along with a historical development of geometry. The Second Edition streamlines and reorganizes material in order to reach coverage of neutral geometry as early as possible, adds more exercises throughout, and facilitates use of the open-source software Geogebra. This text is ideal for an undergraduate course in axiomatic geometry for future high school geometry teachers, or for any student who has not yet encountered upper-level math, such as real analysis or abstract algebra. It assumes calculus and linear algebra as prerequisites. Every red-blooded motorcyclist dreams of making the Big Trip--this updated fifth edition shows them how. Choosing a bike, deciding on a destination, bike preparation, documentation and shipping, trans-continental route outlines across

Africa, Asia and Latin America, and back-country riding in SW USA, NW Canada and Australia. Plus--first hand accounts of biking adventures worldwide.

By 250 AD, Christianity had spread throughout India and China. Known as the Shining Religion or the Luminous Teaching, it drew adherents from Buddhism and Hinduism who were seeking a faith that taught the possibility of achieving a society founded on love and compassion for their fellow man. The new doctrine reached the island nation

of Japan where it was so well received that Christianity threatened to supplant Buddhism as the dominant religion. By the close of the 16th century Japanese Christians numbered in the millions. Fifty years later Christianity was officially proscribed and Christians faced execution for openly practicing their faith. Jesus and the Samurai tells their fascinating story with facts drawn from ancient and modern sources.
