After disassembling and gutting your car, it is easy to feel that you're in way over your head when it comes to the upholstery. This is why so many do-it-yourself restorers outsource the work, at considerable expense, to an experienced upholstery shop. Taking the time to acquire the skills for upholstery restoration may feel like a daunting task, but what if an experienced upholsterer presented every skill you needed to restore upholstery yourself? Starting with a list of necessary tools, author Fred Mattson guides you through all the required tasks, including seat restoration; door panel removal, patterning, assembly, and installation; headliner removal and installation; carpet cutting; and even convertible top restoration. The easy-to-follow step-by-step presentation allows for a thorough understanding of all the processes. Every photo in this book provides a hands-on approach that shows you how to repair and restore a car's interior to concours, show-quality specifications. Other restoration books may show you beautifully restored interiors, but they don't show you how to produce them. This book helps you develop the skills needed with instruction from a professional upholsterer, saving you thousands of dollars over outsourcing the restoration. If you are

interested in saving money, doing a complete restoration yourself, or simply want to know how it's done, this book is a handy addition to your automotive library.

Pensions in the U.S. Economy is the fourth in a series on pensions from the National Bureau of Economic Research. For both economists and policymakers, this volume makes a valuable contribution to current research on pensions and the economics of the elderly. The contributors report on retirement saving of individuals and the saving that results from corporate funding of pension plans, and they examine particular aspects of the plans themselves from the employee's point of view. Steven F. Venti and David A. Wise offer a careful analysis of who contributes to IRAs and why. Benjamin M. Friedman and Mark Warshawsky look at the reasons more retirement saving is not used to purchase annuities. Personal saving through pension contribution is discussed by B. Douglas Bernheim and John B. Shoven in the context of recent government and corporate pension funding changes. Michael J. Boskin and John B. Shoven analyze indicators of the economic well-being of the elderly, addressing the problem of why a large fraction of the elderly remain poor despite a general improvement in the economic status of the group as a whole. The relative merits of defined contribution versus defined benefit plans, with emphasis on

the risk aspects of the two types of plans for the individual, are examined by Zvi Bodie, Alan J. Marcus, and Robert C. Merton. In the final paper, pension plans and worker turnover are the focus of the discussion by Edward P. Lazear and Robert L. Moore, who propose pension option value rather than the commonly used accrued pension wealth as a measure of pension value.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies

all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.
