

How God Acts Creation Redemption And Special Divine Action Theology And The Sciences

In *Does God Roll Dice?* noted Jesuit scholar Joseph Bracken builds on his previous work in an attempt to provide an adequate metaphysical structure with which to understand the God-world relationship. The compatibility between faith and science depends, Bracken has argued, on an adequate metaphysical conception of reality. In this new book, he makes clear how a good understanding of the relationship between the One (as a transcendent reality that serves as a necessary principle of order and intelligibility) and the Many (as the concrete differences between people and things at any given moment) makes a significant difference in dealing with controversial issues in the field of theology and science, thereby easing tensions where they need not exist.

A longstanding question at the intersection of science, philosophy, and theology is how God might act, or not, when governing the universe. Many believe that determinism would prevent God from acting at all, since to do so would require violating the laws of nature. However, when a robust view of these laws is coupled with the kind of determinism now used in dynamics, a new model of divine action emerges. This book presents a new approach to divine action beyond the current focus on quantum mechanics and esoteric gaps in the causal order. It bases this approach on two general points. First, that there are laws of nature is not merely a metaphor. Second, laws and physical determinism are now understood in mathematically precise ways that have important implications for metaphysics. The explication of these two claims shows not only that nonviolationist divine action is possible, but there is considerably more freedom available for God to act than current models allow. By bringing a philosophical perspective to an issue often dominated by theologians and scientists, this text redresses an imbalance in the discussion around divine action. It will, therefore, be of keen interest to scholars of Philosophy and Religion, the Philosophy of Science, and Theology.

As technology continues to rapidly advance, individuals and society are profoundly changed. So too are the tools used to measure this universe and, therefore, our understanding of reality improves. *Boundaries of Self and Reality Online* examines the idea that technological advances associated with the Internet are moving us in multiple domains toward various "edges." These edges range from self, to society, to relationships, and even to the very nature of reality. Boundaries are dissolving and we are redefining the elements of identity. The book begins with explorations of the digitally constructed self and the relationship between the individual and technological reality. Then, the focus shifts to society at large and includes a contribution from Chinese researchers about the isolated Chinese Internet. The later chapters of the book explore digital reality at large, including discussions on virtual reality, Web consciousness, and digital physics. *Cyberpsychology architecture Video games as a tool for self-understanding Avatars and the meaning behind them Game transfer phenomena A Jungian perspective on technology Politics of social media The history and science of video game play Transcendent virtual reality experiences The theophoric quality of video games* The problem of God's action in the world is at the heart of debates today on the relationship between science and religion. By analysing the issue through the lens of analytic philosophy, Marek Slomka reveals how philosophy can successfully bridge science and theology to bring greater clarity to divine action. This book identifies essential aspects from various branches of theism, starting with traditional Thomistic approaches, through to their modified forms such as Molinism and contemporary varieties such as free-will theism and probabilistic theism. Analysing crucial elements of God's nature including omnipotence, omniscience, his relation to time and the tension between immanence and transcendence, Slomka reveals the difficulties in proposing a single conception of God through one theistic tradition. Instead of simplistically juxtaposing particular theistic trends, he highlights the value of pluralistic insights that also draw on important scientific theories, including Darwin's evolution, quantum mechanics and cosmology. By taking a renewed stance on theism that takes into account modern scientific knowledge, this book argues for a new presentation of the problem of God's action in the world and justifies the need for further discussion on contemporary manifestations of internal and external criticism of theism.

Nature reveals majestic truths about God—truths that help us know him better. *God's Mighty Acts in Creation* helps children recognize those wonders, and what they tell us about their Creator. As Starr Meade, author of *Mighty Acts of God*, guides young readers through the six days of creation, she points to how creation displays the wisdom and power of God. She also helps readers explore and apply other references to nature in the Bible by answering questions such as: What did Jesus mean when he claimed to be the true vine? How is all flesh like grass, and how should that affect the way we live? What was God revealing about himself when he made the sun stand still for Joshua? Each reading includes a key verse, stimulating questions, and engaging activities, all geared toward elementary-aged children. Whether parents use this book for family devotions or children read it for themselves, all will learn how God's glory, wisdom, sovereignty, and power are revealed in all of creation. This is a companion volume to *God's Mighty Acts in Salvation*.

Offers a substantial discussion of a central theme in Christian theology - that everything comes from and depends upon God. How does the Christian proclamation of salvation in Jesus Christ relate to the lives of the people who suffer most? Does salvation consist entirely of the hope for eternal life with God? How might the church effectively preach the message of salvation in Christ today? In *Jesus and Salvation*, Robin Ryan adopts a historical approach to these questions, discussing key themes and classic authors in the developing tradition about Christ the Savior. He examines modern soteriology by engaging the thought of Karl Rahner, Edward Schillebeeckx, Gustavo Gutiérrez, and Elizabeth Johnson. He also discusses contemporary conceptions of salvation within an evolutionary view of the cosmos as well as issues related to the Christian confession of Jesus as universal savior in a religiously pluralistic world. Ryan concludes by offering his own reflections on the meaning of salvation from God in Jesus Christ. By understanding salvation in Christ as both gift and call, Ryan invites readers to recognize in the saving grace of God a responsibility for the well-being of the human family and the rest of creation.

What is the Christian response to developments in the hard sciences? What do discoveries at the macro and micro levels have to say about Christian theology, about a theology of God, Christology, pneumatology, and creation? How do the developments in systematic theology that do take the advances in cosmology and the New Sciences seriously come to bear on our worship life? These are the questions that are addressed in this text. It is an initial effort to bring cosmology and the New Sciences into dialogue with developments in systematic and sacramental theology. This book also suggests some ways in which these developments might appear in our worship. Overall, the author is concerned to reduce the cognitive dissonance between our scientifically informed everyday lives and our life of faith.

If, as some scholars attest, Christianity has been complicit in the destruction of the environment, then Christianity can and must also have a role in changing human behavior in a way that helps to solve this massive problem. In *Creation is Groaning*, a set of highly regarded theologians and Scripture scholars offer a theology and spirituality of creation based on principles of eco-justice and environmental responsibility. Contributors to this volume are Denis Edwards, Antoinette Collins, Dermot Nestor, Laurie Woods, Mary Coloe, and Anthony Kelly. Key elements of their project include: tracing the development of Israel's view of creation through different historical situations and key writings, with a particular focus on what ethical responsibilities toward creation emerge from its theology examining Israel's theology of Sabbath" and its developing understanding of the end time, thus encompassing creation in its origins and its final destiny considering the cosmic impact of the Jesus event as Paul and John understood it Together, the authors establish a firm foundation for a new ethic that promotes the flourishing of all planetary life and a just global community.

Astrotheology: Science and Theology Meet Extraterrestrial Life looks at both ends of the telescope: the unfathomable reaches of cosmic space and the excited stirrings within the human psyche. It takes a scientist to explain what we are looking at. It takes a theologian to understand who is doing the looking. This book's scientific authors update readers on astrobiology's search for extraterrestrial life.

Theologians add to the science a theological analysis of the place of space in understanding God's creative work, the prospects of sharing God's creation with extraterrestrial neighbors, and the question of whether one or many incarnations are required for cosmic redemption. Finally, these scholars lay the foundations for an ethic of space exploration. This book introduces a comprehensive astrotheology with an accompanying astroethic.

For many centuries philosophers have been discussing the problem of evil - one of the greatest problems of intellectual history. There are many facets to the problem, and for students and scholars unfamiliar with the vast literature on the subject, grasping the main issues can be a daunting task. This Companion provides a stimulating introduction to the problem of evil. More than an introduction to the subject, it is a state-of-the-art contribution to the field which provides critical analyses of and creative insights on this longstanding problem. Fresh themes in the book include evil and the meaning of life, beauty and evil, evil and cosmic evolution, and anti-theodicy. Evil is discussed from the perspectives of the major monotheistic religions, agnosticism, and atheism. Written by leading scholars in clear and accessible prose, this book is an ideal companion for undergraduate and graduate students, teachers, and scholars across the disciplines.

For the Spirit, being somewhat forgotten is an occupational hazard. The Holy Spirit is so actively involved in our lives that we can take his presence for granted. As they say, familiarity breeds contempt. Just as we take breathing for granted, we can take the Holy Spirit for granted simply because we constantly depend on him. Like the cane that soon feels like an extension of the blind man's own body, we too easily begin to think of the Holy Spirit as an extension of ourselves. Yet the Spirit is at the center of the action in the divine drama from Genesis 1:2 all the way to Revelation 22:17. The Spirit's work is as essential as the Father's and the Son's, yet the Spirit's work is always directed to the person and work of Christ. In fact, the efficacy of the Holy Spirit's mission is measured by the extent to which we are focused on Christ. The Holy Spirit is the person of the Trinity who brings the work of the Father, in the Son, to completion. In everything that the Triune God performs, this perfecting work is characteristic of the Spirit. In *Rediscovering the Holy Spirit*, author, pastor, and theologian Mike Horton introduces readers to the neglected person of the Holy Spirit, showing that the work of God's Spirit is far more ordinary and common than we realize. Horton argues that we need to take a step back every now and again to focus on the Spirit himself—his person and work—in order to recognize him as someone other than Jesus or ourselves, much less something in creation. Through this contemplation we can gain a fresh dependence on the Holy Spirit in every area of our lives.

How can an event that has taken place in the past have an effect upon the human experience of salvation in the present? In examining one of the essential questions of the Christian faith, Paul S. Fiddes explores the limits as well as the gains to be made in speaking about crucifixion as a historical event, and considers the relationship of the crucifixion to the continuing process of God's saving activity. He considers the relevance of a past act of atonement to such areas of practical experience as forgiveness, liberation, and suffering.

A superb, standard Christian theology text for nearly a quarter century, Daniel Migliore's *Faith Seeking Understanding* explores all of the major Christian doctrines in freshly contemporary ways. This third edition offers new FOR FURTHER READING suggestions at the end of each chapter, a substantial expansion of the glossary, and new material incorporated throughout, including a section on Christians and Muslims. Further, the three imaginary theological dialogues culminating the book -- pointedly playful exchanges that have delighted countless readers -- are here joined by a fourth dialogue, between Karl Barth and Friedrich Nietzsche, on atheism. All in all, a new generation of students, pastors, and Christian educators, eager to better understand the rich heritage, central themes, and contemporary challenges of Christian theology, will find both guidance and stimulation in Migliore's updated work.

Four outstanding McGrath books are here in one volume that gives a clear, thoughtful, and highly readable introduction to the basic doctrines of the Christian faith.

This book is an animist Christian liberation theology and a call to insurrection against the fossil fuel empires that have created the climate catastrophe. As such, it retrieves the animist Jesus to inspire resistance to anti-ecological, contemporary settler colonization of the Earth.

--John Grim, Yale School of Forestry and Environmental Studies, and Yale Divinity School

How God Acts Creation, Redemption, and Special Divine Action Fortress Press

This handbook provides an interdisciplinary and diverse reference work to the Holy Spirit. Daniel Castelo and Kenneth M. Loyer gathered together a wide range of voices that are religiously, geographically, and ethnically diverse, bringing theology into conversation with biblical studies, ethics and morality, and global Christian studies. The T&T Clark Handbook of Pneumatology examines the Holy Spirit in a variety of sources, such as the Synoptic Gospels, the Catholic Epistles, the Old Testament, and the Hebrew Scriptures. It also includes chapters on key concepts in the field, such as mediation and sacramentality, ecology, and creation. This broad scope enables readers to appreciate how nuanced the field of Pneumatology is, and how it can be relevant for other Christian discourses.

In this exciting work, Samuel Powell offers a new constructive and systematic vision of creation by interpreting it in terms of contemporary science and trinitarian theology. Powell's work unfolds in three stages, building on the multiple ways the doctrine of creation actually functions for Christians. He first analyzes its regulative dimension. Even in all the multiplicity of historical Christianity, he shows, the doctrine commits Christians to a particular set of normative beliefs about the world and God's relation to it. Second, Powell builds on the doctrine's hermeneutical potential. It allows Christians both to interpret the meaning of creation in terms of other prevalent philosophical, religious, or scientific ideas and also to interpret the world, as disclosed by scientific theory, in theological terms. In the heart of his book, Powell correlates creaturely characteristics with their participation in God through the trinitarian persons. Finally, in light of his findings, Powell drives home the often ignored ethical dimension of the doctrine, especially in relation to the environment, our consumerist lifestyle, and eschatology. Powell's bold proposal harvests from two of the most fruitful fields of recent theology - trinitarian theory and religion-and-science - and crafts a creative new vision of how we and all creation

participate in the life and work of the triune God.

Catholic ecclesiology stands at the threshold of a new moment in the reception of the Second Vatican Council. The election of Pope Francis—coinciding with the fiftieth anniversary of the council—has inspired a fresh consideration of its teaching in such diverse areas as ecumenism, inculturation, missiology, and ministry. The chapters in this volume have their origin in a special symposium that called together over forty of the leading Catholic scholars from throughout North America in order to discuss the future of theological reflection on the church. The nine essays in this volume guided that conversation and offer an entry into some of the most pressing issues in ecclesiology today.

Denis Edwards was a theologian concerned with the science and religion discourse and eco-theology. He died in March 2019. This book is a collection of his till now unpublished talks and essays.

The natural world around us is in crisis. We know it has a dynamic, evolutionary character. How might we understand this world in relationship to God? Partaking of God builds on the foundations of the dynamic trinitarian theology of Athanasius. It develops into a theology of the Word as the divine Attractor and the Spirit as the Energy of Love in evolutionary emergence. Then it explores God's suffering with creatures, the humility of God in creation, church teaching on the human soul in relation to neuroscience, and grace and original sin in relationship to evolution. It culminates in a Christian theology of ecological conversion.

The Doctrine of the Trinity is an exercise in wonder. From the earliest days of Christianity, theologians of the church have drawn upon the most sophisticated language and understandings of their time in an attempt to clarify and express that faith. But how should we attempt to articulate that faith today? In this volume, Ernest Simmons engages precisely that question by asking what the current scientific understanding of the natural world might contribute to our reflection upon the relationship of God and the world in a Triune fashion.

Human Interaction with the Divine, the Sacred, and the Deceased brings together cutting-edge empirical and theoretical contributions from scholars in fields including psychology, theology, ethics, neuroscience, medicine, and philosophy, to examine how and why humans engage in, or even seek spiritual experiences and connection with the immaterial world. In this richly interdisciplinary volume, Plante and Schwartz recognize human interaction with the divine and departed as a cross-cultural and historical universal that continues to concern diverse disciplines. Accounting for variances in belief and human perception and use, the book is divided into four major sections: personal experience; theological consideration; medical, technological, and scientific considerations; and psychological considerations with chapters addressing phenomena including prayer, reincarnation, sensed presence, and divine revelations. Featuring scholars specializing in theology, psychology, medicine, neuroscience, and ethics, this book provides a thoughtful, compelling, evidence-based, and contemporary approach to gain a grounded perspective on current understandings of human interaction with the divine, the sacred, and the deceased. Of interest to believers, questioners, and unbelievers alike, this volume will be key reading for researchers, scholars, and academics engaged in the fields of religion and psychology, social psychology, behavioral neuroscience, and health psychology. Readers with a broader interest in spiritualism, religious and non-religious movements will also find the text of interest.

At the end of the twentieth century we began to understand that the earth is vulnerable, that it is like a tiny garden in space, under threat on all sides. *Jesus and the Cosmos* is an attempt to think theologically about the ecological crisis we face in the light of the great Christian tradition. Our theological tradition has been shaped within the worldview of a static universe. By contrast, we are told today that the universe began with a cosmic explosion called the Big Bang, that we live in an expanding universe with galaxies rushing away from us at an enormous rate, that we human beings are part of an evolutionary movement on the earth, and that we are intimately linked with the health of delicately balanced life-systems on our planet. Not only has modern science given this age a new cosmology, but contemporary historical studies have provided us with a new approach to the historical Jesus. Critical biblical study has allowed us to know far more about the Jesus who brought joy and liberation into people's lives. In *Jesus and the Cosmos*, Denis Edwards tells the story of the cosmos, the story of Jesus of Nazareth, and shows their connections. Ultimately, he will assert "Jesus of Nazareth, risen from the dead, IS the dynamic power at the heart of the cosmic process."

A fundamental requirement in an inclusivist understanding of the relationship between Christianity and other religions is evidence of God's salvific activity outside any knowledge of Christ. This is commonly identified in the religion of Old Testament Israel. On this basis an analogy (the "Israel analogy") is drawn between the religion of the old covenant and contemporary non-Christian religions. Closely related is the parallel argument that as Christ has fulfilled the Old covenant, he can also be seen as the fulfillment of other religious traditions and their scriptures. This study outlines the use of the Israel analogy and the fulfillment model, subjecting these concepts to a biblical and theological critique revealing that the exegetical and patristic data are misconstrued in support of these concepts. Furthermore, the Israel analogy and the fulfillment model undermine the sui generis relationship between the old and new covenants and fail to respect the organic, progressive nature of salvation history. They also misconstrue the old covenant and the nature of its fulfillment in the new covenant. The Israel analogy and fulfillment model rely on a correspondence between the chronologically premessianic (Israel) and the epistemologically premessianic (other religions), and therefore consider the "BC condition" to continue today. In so doing, they undermine the significance of the Christ-event by failing to appreciate the decisive effect of this event on history and the nature of existence. It marks a radical turn in salvation history, a crisis point, rendering the BC period complete and fulfilled. Therefore the concept of a continuing "premessianic" condition or state is seriously flawed, as are the Israel analogy and fulfillment model. Thus the inclusivist paradigm reliant in large part on these defective concepts is also problematic, and proponents of this paradigm need to reconsider its basis.

With about one billion members, the Catholic Church is one of the world's largest religious bodies, and its history is crucially linked to global events. In the *Historical Dictionary of Catholicism*, author William J. Collinge provides the reader

with a comprehensive introduction to the theology, doctrines, and worship of the religion. He covers the entire Catholic tradition from the time of Jesus to the present, including the periods before the present division of Christianity into Roman Catholic, Eastern Orthodox, and Protestant. Collinge has also included entries on heretical, schismatic, and dissident movements within Catholicism, and he covers the relation of Catholicism to other Christian traditions, to the major non-Christian religions, and to Western cultural and philosophical traditions. The second edition of the Historical Dictionary of Catholicism has been updated to reflect recent developments in the Catholic Church, most notably the death of Pope John Paul II and his succession by Pope Benedict XVI. An updated introduction precedes the main body of the dictionary, which contains more than 500 alphabetical, cross-referenced entries covering persons, organizations, places, events, titles, and concepts. The entries are followed by several appendixes on popes, ecumenical councils, the documents of Vatican Council II, major papal encyclicals, and Catholic prayers, and a comprehensive bibliography provides the researcher with further readings. The second edition of the Historical Dictionary of Catholicism is an ideal access point for students, researchers, or anyone interested in the history of the Catholic Church.

The purpose and aim of this book is to develop an appropriate leadership model for missional churches. This implies a positioning of this book within the broader theology of mission and a consensus on the theology of the *Missio Dei*, originating at the 1952 conference of the International Missionary Council in Willingen, Germany. In this approach to the theology of mission, mission is understood as the work of the Trinitarian God, and the church is privileged to participate in God's mission. It is against this background that the growing consensus on missional ecclesiology challenges leadership models developed for a different time and a different kind of church (with less or no emphasis on the missional character of the church). The aim is to reflect theologically on the role of leadership in the missional church. What kind of ideas about power, authority and leadership are appropriate for a missional church? New missional challenges demand new ideas about missional leadership. Church organisation and leadership reflects a theological position – there is a strong relation between ecclesiology and church organisation. The nature of the church provides the framework to understand the character of the church. What the church is determines what the church does. The church organises what it does and agrees on rules that regulate ministries and organisation. Issues such as the way the church organises and governs what it does, and thus church leadership, need to be answered against this background and understanding. Church polity and organisation, as well as leadership, must reflect the identity, calling, life and order of the church. This book, therefore, addresses life in the Trinity, participation in the *Missio Dei* and contours of the missional church as the point of entry to develop leadership insights. It contributes towards the development of an appropriate model of leadership for missional churches, because although recent developments in the theology of mission comprehensively addressed the area of missional ecclesiology, there is a gap in the development of a leadership model based on the concept of authority in the missional church.

From one of the world's most influential spiritual thinkers, a long-awaited book exploring what it means that Jesus was called "Christ," and how this forgotten truth can restore hope and meaning to our world. "Anyone who strives to put their faith into action will find encouragement and inspiration in the pages of this book." -Melinda Gates In his decades as a globally recognized teacher, Richard Rohr has helped millions realize what is at stake in matters of faith and spirituality. Yet Rohr has never written on the most perennially talked about topic in Christianity: Jesus. Most know who Jesus was, but who was Christ? Is the word simply Jesus's last name? Too often, Rohr writes, our understandings have been limited by culture, religious debate, and the human tendency to put ourselves at the center. Drawing on scripture, history, and spiritual practice, Rohr articulates a transformative view of Jesus Christ as a portrait of God's constant, unfolding work in the world. "God loves things by becoming them," he writes, and Jesus's life was meant to declare that humanity has never been separate from God--except by its own negative choice. When we recover this fundamental truth, faith becomes less about proving Jesus was God, and more about learning to recognize the Creator's presence all around us, and in everyone we meet. Thought-provoking, practical, and full of deep hope and vision, *The Universal Christ* is a landmark book from one of our most beloved spiritual writers, and an invitation to contemplate how God liberates and loves all that is.

Human beings have wondered about the stars since the dawn of the species. Does life exist out there – intelligent life, even – or are we alone? The quest for life in the universe touches on fundamental hopes and fears. It touches on the essence of what it means to formulate a theory, grasp a concept, and have an imagination. This book traces the history of the science of this area and the development of new schools in philosophy. Its essays seek to establish the history and philosophy of astrobiology as research fields in their own right by addressing cognitive, linguistic, epistemological, ethical, cultural, societal, and historical perspectives on astrobiology. The book is divided into three sections. The first (Cognition) focuses on the human mind and what it contributes to the search for life. It explores the emergence and evolution of terrestrial life and cognition and the challenges humans face as they reach to the stars. The essays raise philosophical questions, pose ethical dilemmas, and offer a variety of approaches, including one from cognitive zoology, in formulating a theory of the universal principles of intelligence, the limits of human conceptual abilities, and the human mind's encounter with the unknown. The second section (Communication) examines the linguistic and semiotic requirements for interstellar communication. What is needed for successful communication? Are there universal rules for success? What are the possible features – and limitations – of exolanguages? What is required for recognizing a message as a message? The third section (Culture) considers cultural and societal issues. It explores astrobiology's organization as a scientific discipline, its responsibilities to the public sphere, and its theological implications. It reviews the historically important panspermia hypothesis, along with the popularization of astrobiology and its ongoing institutionalisation. Through addressing these questions, we take our first steps in exploring the immense terra incognita of extraterrestrial life and the human mind.

". . . that you may become partakers in the divine nature" 2 Peter 1:4 "The theme of deification intimately touches on human identity and the actualization of humanity's ultimate purpose. It is predominantly an anthropological and soteriological expression of Christian theology. At the same time, it testifies to the identity of a Christian God, divine universal design, and God's economy, where the trinitarian and christological apprehension receives the central place. Theosis, both on an individual and cosmic scale, is not exiguous in its eschatological perspective, either. The testimony of theosis is testimony to the inexplicable mystery of divine intimacy. Deification penetrates all spheres of human existence, and can be seen as an answer to most pending ultimate questions. It is essentially practical in its manifestation and uplifting in its content, but nevertheless, always evasive and arcane in its comprehension." From the Introduction This book contains biblical and historical-theological essays that offer innovative approaches to the issue of theosis. The interconnections between the theology of deification and the doctrines of the Trinity, Christology, anthropology, protology, hamartiology, soteriology, and eschatology are made manifest in these fascinating new studies. It is aimed both at those who are already students of theosis and at those who are looking for an introductory text. It also contains a comprehensive and up-to-date bibliography for those seeking further resources on the theme.

The damage human beings are doing to the atmosphere, the seas, the rivers, the land, and the life-forms of the planet is extreme and deadly. It constitutes a crisis that demands all of humanity's wisdom, ingenuity, and commitment. The whole human community needs to be involved in the response to this crisis - young and old, women and men, farmers, politicians, gardeners, teachers, planners, scientists, engineers, artists, builders, cooks, and theologians. In *Earth Revealing - Earth Healing*, the authors attempt to make clear the way in which Christian theology opens out into a theology of Earth revealing and challenges us towards a practice of Earth healing. *Earth Revealing - Earth*

Healing offers a rethinking of theology as a significant part of the rethinking that the human community must do in its stance toward creation. Aware that some theological attitudes have contributed to exploitative attitudes and to disregard for the good of the planet, the contributors are also convinced that the biblical and theological tradition has resources that can be retrieved and developed as an ecological theology. Such a theology can contribute to the healing of our planet. The chapters of *Earth Revealing - Earth Healing* stretch across a number of theological sub-disciplines and related areas. Among the perspectives from the Christian theological tradition, there are reflections on the theology of the Trinity, Christology, Christian anthropology, the theology of the Holy Spirit, and contemporary feminist theology. There are also more general philosophical and cultural perspectives, including discussions of place and of landscape traditions. Finally there are practical perspectives, including discussions of globalization, the challenge of suffering and bioethics. Essays and contributors are *The Landscape Tradition: A Broader Vision for Ecotheology*, by Stephen Downs; **Globalization and Ecology*, - by Christine Burke, IBVM; **'For Your Immortal Spirit Is in all Things': The Holy Spirit in Creation*, - by Denis Edwards; **Enfleshing the Human: An Earth-Revealing, Earth-Healing Christology*, - by Duncan Reid; **God's Shattering Otherness: The Trinity and Earth's Healing*, - by Patricia Fox, RSM; **Embracing Unloveliness: Exploring Theology from the Dung heap*, - by Lorna Hallahan; **Up Close and Personal: In the End, Matter Matters*, - by Anthony Lowes; **The Relationship Quilt: Feminism and the Healing of Nature*, - by Lucy Larkin; **A Timely Reminder: Humanity and Ecology in the Light of Christian Hope*, - by Gregory Brett, CM; **Ecotheology as a Plea for Place*, - by Phillip Tolliday; **Situating Humanity: Theological Anthropology in the Context of the Ecological Crisis*, - by James McEvoy; and **Bioethics, Ecology, and Theology*, - by Andrew Dutney. Denis Edwards is a senior lecturer in systematic theology at Catholic Theological College and in the ecumenical consortium at the Adelaide College of Divinity, Flinders University. He has written other books on theology and is a priest of the Roman Catholic Archdiocese of Adelaide. "The current religion and science dialogue begs for greater clarity on the relation of God to nature. In *God and Nature* two scholars who embrace contemporary insights from science and religion explore the complexities of this debate. As the narrative unfolds, classical and contemporary thinkers are engaged as discussion partners in articulating a philosophical theology of nature. Conceptual pairs, in which two concepts play off of each other, provide the structure for each of the seven chapters, with usually the first concept being more scientific in character and the second more religious in tone. These pairs of concepts—from chronology and creation to creativity and creator—help to thematize and structure the progressing narrative. Within each chapter the two concepts are first investigated independently, then interdependently, and finally in relation to the divine. At the story's completion nature has emerged as alive with possibility that is as alluring as the actuality it evokes. Envisioned is a divine Creator who works in and through the possibility of creation to lure it into fuller manifestations via creative transformation.

Classical Christianity is rooted in a historical event: the Resurrection of Jesus of Nazareth. This is the central tenet of the Christian Faith. However there are a good number of tenets of Christianity that aren't historical at all. Rather, they are ontological. In other words, they are grounded in the nature of reality itself. In this work Rocco Boni shows how the dozen or so ontologically-based tenets of Christianity derive from the very foundations of reality; being grounded in the theistically-friendly ontology of quantum phenomenon. These tenets seem to have been built into the cosmos at the ground floor, their realization deriving from the indeterministic, immaterial, abstract nature of quantum process. This is not simply a book, it's a discovery. One that shows that the true ontic status of reality is not simply theistic, but Christian. The structure of this theistic ontology is elegant and economic, both hallmarks of scientific truth. If there were such a thing as a Theistic Unification Theory, this would be it.

Christians trying to "save the planet" have to relate "creation" with "salvation." This volume explores the ways in which this task is approached by a wide range of recent theological movements.

The promises of God formed the basis of John Wesley's optimism of grace. Wesley believed God not only could but in fact would fulfill all his promises to bring salvation to the nations; to make new heavens and a new earth; to liberate the whole creation from its bondage to decay (Rom. 8:21). This collection of essays by respected Wesleyan theologian Howard A. Snyder reflects the spirit of Wesley's optimism of grace. The first half of this collection offers an overview of Wesley's theology and practice, particularly with regard to gospel, mission, and culture. Part Two examines the inter-dynamic between church renewal and global mission. The collection also includes Wesleyan appraisals of Clark Pinnock's theology and the ecclesiology of Karl Barth. Howard A. Snyder serves as distinguished professor and chair of Wesley Studies at Tyndale Seminary in Toronto, Ontario, Canada. Previously he was professor of history and theology of mission in the E. Stanley Jones School of World Mission and Evangelism at Asbury Theological Seminary in Wilmore, Kentucky from 1996 to 2006. He has also taught at United Theological Seminary, Dayton, Ohio, and pastored in Chicago and Detroit. He has written numerous books, including "The Problem with Wineskins" (IVP), "The Radical Wesley" (IVP) and, most recently "Populist Saints: B. T. and Ellen Roberts and the Birth of Free Methodism" (Eerdmans).

The Earth needs our attention—the best of our intellectual, ethical, and spiritual wisdom and action. In this collection, written in honor of Elizabeth A. Johnson, scholars from the United States and around the world contribute their insights on how theology today can and must turn to the world in new ways in light of contemporary science and our ecological crisis. The essays in this collection advance theological visions for the human task of healing our destructive relationship with the earth and envision hope for our planet's future. Take a Unique Adventure as You Explore Questions about God, Suffering, Evil, Pain, and Final Destiny Be engaged, enlightened, and surprised by this unique book on suffering that gives control to the reader. Similar to novels that allow readers to choose their own "paths," *Why Is There Suffering?* by Bethany Sollereeder invites readers to make choices that lead them on an exploration of theological possibilities about topics like: God's existence God's nature The nature of suffering Evil Pain The final destiny of humans and animals Readers will face multiple possibilities regarding suffering and its theological explanations and have to make choices about which one they find most plausible. Each decision will lead to further complexities and new choices, helping readers see how theological choices lead to certain conclusions. This book does not offer final answers. Instead, it introduces the "theological" possibilities, both Christian and non-Christian, that readers can explore and wrestle with so they can make informed decisions about their beliefs. Taking an intentionally light-hearted approach to a heavy topic this accessible and winsome book presents an unusually helpful introduction to the problem of suffering and the most commonly offered responses to it. Suggestions for further reading are provided with each choice.

Including classical, modern, and postmodern approaches to theological anthropology, this volume covers the entire spectrum of thought on the doctrines of creation, the human person as imago Dei, sin, and grace. The editors have gathered an exceptionally diverse range of voices, ensuring ecumenical balance (Protestant, Roman Catholic and Orthodox) and the inclusion of previously neglected perspectives (women, African American, Asian, Latinx, and LGBTQ). The contributors revisit authors from the "Great Tradition" (early church, medieval, and modern), and discuss them alongside critical and liberationist approaches (ranging from feminist, decolonial, and intersectional theory to critical race theory and queer performance theory). This is a much-needed overview of a rapidly evolving field.

From providence and miracles to resurrection and intercessory prayer, Edwards shows how a basically noninterventionist model of divine action does justice to the universe as we know and also to central convictions of Christian faith about the goodness of God, the promises of God, and the fulfillment of creation. Here is wonderfully lucid theology supporting an excitement of how God is at work in the universe.

Nothing confuses Christian ethics quite like the Old Testament. Some faithful readers struggle through its pages and conclude that they must obey its moral laws but may disregard its ceremonial and civil laws. Others abandon its teaching altogether in favor of a strictly New Testament ethic. Neither option, argues Chris Wright, gives the Old Testament its due. In this innovative approach to Old Testament ethics--fully revised, updated and expanded since its first appearance in 1983 as *Living as the People of God (An Eye for an Eye in North America)* and including material from *Walking in the Ways of the Lord*--Wright examines a theological, social and economic framework for Old Testament ethics. Then he explores a variety of themes in relation to contemporary issues: economics, the land and the poor; politics and a world of nations; law and justice; society and culture; and the way of the individual. This fresh, illuminating study provides a clear basis for a biblical ethic that is faithful to the God of both Testaments.
