controller of the living system, is as susceptible to external and internal stresses as all other bodily components. The brain is also abode of the mind, and the mind is the embodiment of thoughts. The scientific observation that brain and mind die simultaneously is irrefutable. Wherein the brain the mind parks itself is a mystery. The brain is more intricate than the universe and the mind exceeds the brain in complexity. Billions of neurons and trillions of synapses keep on firing, acting, reacting, storing, and communicating to and from sensory organs as long as the structure of the brain is not damaged, diseased, or dead. Brain, when overloaded with its electric charge due to intense mental activity, can explode like a bomb. Five people are known to have died when their brains blew up because of the condition called Hyper-Cerebral Electrosis (HCE). The most recent death occurred when psychic Barbara Nicole's skull burst. Chess Champion Nikolai Titov's head suddenly blew apart when he was concentrating on his move. The brain endures many mini explosions without shattering. HCE kills rarely, but sickens very often. All evil emotions cause stronger HCE than pleasant thoughts do.

Feeling sad during a funeral and being relaxed while having dinner with friends are

atmospheric feelings. However, the notion of “atmosphere”, meaning not only a subjective mood, but a sensorial and affective quality that is widespread in space and determines the way one experiences it, has intensified only recently in scientific debate. The discussion today covers a wide range of theoretical and applied issues, involving all disciplines, paying attention more to qualitative aspects of reality than to objective ones. These disciplines include the psy-approaches, whose focus on an affective experience that is emerging neither inside nor outside the person can contribute to the development of a new paradigm in psychopathology and in clinical work: a field-based clinical practice. This collection of essays is the first book specifically addressing the link between atmospheres and psychopathology. It challenges a reductionist and largely unsatisfactory approach based on a technical, pharmaceutical, symptomatic, individualistic perspective, and thus promotes the exchange of ideas between psy- disciplines, humanistic approaches and new trends in sciences.

Here is "the real book" of the incredible Mahalia Jackson, as pledged to her by her close friend, Laurraine Goreau, before her death. Rich in poetic condensation and vivid imagery, it reaches back to recreate an era and a way of life that no longer exist; it surfaces hidden folk lore and cultural patterns; it delves into Voodoo and a secret psychic world. It shows you jazz at its roots when it was "jass", the Devil's temptation; first-hand, it gives you the surprising sociological significances of the whole gospel movement ... but most of all, it takes you with a misshapen mote on a forgotten scrap of river-land as Mahalia pushes, fights, sings her way to a personage of unique stature among Americans to th eworld's peoples, revered by hundreds of thousands as a symbol of utter integrity, the bearer of God's tidings.

The educational system in the United States is broken, and it's time to do something about it! In this guide, author Clifford Bebell, EdD, who taught at several universities, exposes major flaws in our schools and shows what can be done to improve them. He offers solutions aimed at fixing the system so that all students succeed. He outlines the most serious problems that prevent students from achieving, such as improper use of homework, the grading system, inadequate treatment of reading deficiencies, teaching as “telling,” and poor testing practices. What’s more, inertia, special interest groups, inadequate funding, and the sheer size of our school systems only make it harder to help students. All too often, we treat students the same—requiring them to learn in ways that are uncomfortable or inappropriate for their level of achievement. Meanwhile, higher-achieving students are forced to simply wait while others catch up. Whether you are a parent, teacher, administrator, policy maker or citizen, you can find new ideas and practical approaches for improving education for all students in this detailed analysis. Discover what the future of education should look like in *How to Fix the Schools*.

Watch the author talk about 'Organisational Schizophrenia: Impact on Customer Service Quality'. More than two decades after the watershed economic reforms of 1991, customers find yawning gaps between what many companies promise to deliver as a matter of policy and

what, in customers' perception, is actually delivered at the operating level. A major part of the problem stems from the fact that while a company may be keen to maximise customer satisfaction, it would also want to maximise shareholder value at the same time. This obsessive pursuit kills people`s objectivity. The resulting conflict of self-interest generates wrong signals within the company, leading to organisational schizophrenia severely affecting employees' emotional engagement. Supported by sizeable empirical research from 300 interviews with almost 200 respondents, including customer-contact employees, the book explores the reasons why, in a company- - behaviour becomes unpredictable, - responsiveness becomes arbitrary, - initiative becomes risky, - operating practices drift away from policy and - mission statements begin to turn into mere posters. The book shows how organisational schizophrenia and the consequent problems can be avoided through disciplined and rigorous commitment to core values, standing up to wrongdoing, and taking a stand for the customer at all levels of management.
