"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why so little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

Recent years have seen intense debates among management and academics on the rise of 'lean production' and 'Japanization'. Some authors have stressed the 'universal' impact of new forms of work organization and 'best practice' while others have questioned the limits of convergence, stressed the weight of national contexts or 'societal effects', or highlighted the evolutionary effects of unpredictability in the external environment. The international automobile industry has been a focus for much of this debate and this book, written by a team of leading international researchers in the field, uses this industry to examine in detail the actual practice of the transfer and adaptation of productive models and the trajectories of innovation, compromise, and failure that can result. Case studies cover in detail the Japanese transplant experience in North America, and the global experience of hybrid production systems in Europe, Latin America, and Asia. The

book contributes to theoretical discussions about the transfer, adaptation, or convergence of productive models. In particular, the authors argue that direct transplanted or imitation of these models is rarely feasible or even desirable. Systems cannot be transferred without being significantly reshaped. Instead, the book focuses on the process of 'hybridization', the complex interaction of productive models with national and societal effects. Hybridization, it is argued, is inevitable. But this should be seen not simply as a process of compromise and retreat but also as an important dynamic of innovation and learning. This book is from the French-based international research network GERPISA (Groupe d'étude de recherche permanent sur l'industrie et les salaires de l'automobile). See related titles below.
