From bestselling author David Nasaw, a sweeping new history of the one million refugees left behind in Germany after WWII. In May 1945, after German forces surrendered to the Allied powers, millions of concentration camp survivors, POWs, slave laborers, political prisoners, and Nazi collaborators were left behind in Germany, a nation in ruins. British and American soldiers attempted to repatriate the refugees, but more than a million displaced persons remained in Germany: Jews, Poles, Estonians, Latvians, Lithuanians, Ukrainians, and other Eastern Europeans who refused to go home or had no homes to return to. Most would eventually be resettled in lands suffering from postwar labor shortages, but no nation, including the United States, was willing to accept more than a handful of the 200,000 to 250,000 Jewish men, women, and children who remained trapped in Germany. When in June, 1948, the United States Congress passed legislation permitting the immigration of displaced persons, visas were granted to sizable numbers of war criminals and Nazi collaborators, but denied to 90% of the

Jewish displaced persons. A masterwork from acclaimed historian David Nasaw, *The Last Million* tells the gripping but until now hidden story of postwar displacement and statelessness and of the Last Million, as they crossed from a broken past into an unknowable future, carrying with them their wounds, their fears, their hope, and their secrets. Here for the first time, Nasaw illuminates their incredible history and shows us how it is our history as well.

The average person tells at least six lies a day – is it any wonder we struggle to sort fact from fiction in the modern world? Thanks to remarkable increases in the speed and ease of information sharing, the ability to critically judge the integrity of information around us is more necessary now than ever before. Luckily, it is possible for any individual to evaluate information in a much more critical fashion, based largely upon a simple process of deductive reasoning. This book explores the elements of truth and fiction across the expanse of our daily lives. Through examination of public figures and members of popular culture who have been caught in the act of deception, the reader is encouraged to consider what information can best be used to judge the legitimacy of any event, as well as considering our own culpability in perpetuating a culture of deceit. From the evolution of deception to the private fictions we tell ourselves, this book will guide the reader to a new perspective on the role of lying in modern society. Like Dan Ariely and Daniel Kahneman have opened our eyes to the fallibility of human judgment, Lori Badura opens our eyes to the psychological and social mechanisms that enable humans to distort the truth both consciously and unconsciously.” Daryl Wansink, PhD (social psychologist) *Tell It Like It Isn't* is a fresh voice in the increasing debate surrounding the growing prevalence, impact, and tolerance of deception. She has brilliantly elevated the discussion to the level of our society, allowing us to consider the deceptive individual within the context of their environment. In my experience, it is rare to find psychological theory presented so clearly and compellingly. John C. Parker, PhD (social psychologist)

*Myths of Capitalism* shows that tenets of the capitalist belief system – the sanctity of private property, the social benefits of profit, etc. – do not hold up under empirical scrutiny. It also addresses seminal issues such as: enforced scarcity resulting from technological advances in production; the historically unique and unsustainable separation of political and economic systems resulting from the 18th century democratic revolutions; the ruling-class drive to replace democratic government with a global plutocracy; and increased democratic participation as the only route to systemic change. A comprehensive primer on the capitalist system, written in layman's language and non-polemical, this is a book for everyone, including students of economics and political science.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be

more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. *Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030.
