The phenomenon of consumption has increasingly drawn attention from economists. While the 'sole purpose of production is consumption', as Adam Smith has claimed, economists have up to recently generally ignored the topic. This book brings together a range of different perspectives on the topic of consumption that will finally shed the necessary light on a largely neglected theme, such as Why is the consumption of symbolic goods different than that of goods that are not constitutive of individuals' identity? How does the consumption of symbolic goods affect social processes and economic phenomena? Will taking consumption (of symbolic goods) seriously impact economics itself? The book discusses these issues theoretically, and, through analyses of such cases as food, religion, fashion, empirically as well. It also discusses the possible role in the future of consumption. This book was previously published as a special issue of Review of Social Economy

This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics.
