The Student Paramedic Survival Guide gives information and advice to help you succeed in your education and become a registered paramedic. The book supports you from the start of your journey as you choose a programme, through study and practice placements, to the final stages of registration and applying for work. Finally, the book prepares you to make the transition into your first paramedic job. To equip you with insights into what studying to be a paramedic is really like, the book is packed full of comments from students, paramedics, mentors, paramedic educators and academics. Their expertise and experience will be invaluable as you study and prepare for practice. Other useful tools are included, such as web links for suggested further reading. The book will answer questions such as: ? Is this the right career for me? ? What do I need to consider when choosing a university and programme of

study?? What will I be studying?? How can I make the most of the simulations that are part of my course?? Who is there to support me on placements?? What is it like caring for patients and their families?? How can I adjust to shift work?? What can I do to prepare for registration and securing my first job? The book also includes advice on making the most of your preferred learning style and guidance on how to look after yourself when you encounter traumatic events. Written by a bestselling author with the help of students, practice staff and academics from a variety of higher education institutions, this guide for prospective and current student paramedics is the essential resource to support your journey through the excitement, challenges and realities of being a student paramedic on a higher education programme. "This is a must buy for any student from school leaver to the mature candidate who is thinking of studying to be a Paramedic. The book comprehensively addresses everything from where and how to apply, unpicking the complex picture of fees and funding to the realities of what to expect when you get to University and what it's like on placement. With valuable contributions from current students, academics and educators this book explains everything you need to know and might not have thought you needed to know before you apply." Mark Nevins, Senior Lecturer, Teeside University, UK, and NMC Registered Adult Nurse and HCPC Registered Paramedic "I would consider this book as required reading for anyone considering embarking on a career as a paramedic. It is honest, informative and true to life. I liked the way that all aspects of student life were covered, from applications, to studying and placements and finally being out in the world. This job isn't what a lot of people seem to think it is but Amanda has gone to great lengths to myth bust. This book shows a depth and consideration that all prospective paramedic students should appreciate. It is clear that a great deal of effort has gone into this survival guide." Mark Young, Paramedic & Practice Placement Educator, South East Coast Ambulance Service, UK "I liked the way that the book utilises a cross-section of students, practitioners and academics when providing opinions on the student paramedic journey, as this provides the triangulation required to ensure the views presented are representative of the student paramedic arena. It will provide a useful guide to the mysteries of the student journey. It is also useful that it illustrates the differences across the whole of the UK and considers the different approaches and how they can change the coping mechanisms that need to be used, and that are in place. The 4 sections provide an excellent overview of the 4 areas that most student paramedics want to, and need to, know, and answers a number of the questions (if not all) asked very effectively. The sections also support the needs of the profession, as well as the students own professional journey; covering a number of areas that are part of the institutional and ambulance Trusts inductions. It is useful to note that the Survival Guide also recognises the differences the student paramedic experiences when compared to other students in universities. This means that the Survival Guide can act as an 'aide memoire' that is available when those difficult questions come up that need an immediate answer that can allay fears and anxieties and signpost the students to the places they can get support. This aspect is helped by the shared experiences from past and present students and practitioners, who act as mentors and paramedic educators to the students. This book has been a long time coming and will, based on my experience, help the student to have a better transition towards their future professional role." Lizzie Ryan, Education Business Manager and Clinical Training Manager (East) at South Western Ambulance Service NHS Foundation Trust, UK, also Lecturer at Bournemouth University, UK and Plymouth University, UK and the Open University, UK

Students and newly qualified staff make up much of the workforce delivering end-of-life care but, because end-of-life care can be both technically challenging and emotionally demanding, it is an aspect of nursing that can cause considerable anxiety. This very accessible, straightforward book helps to allay those concerns and enables pre-registration students to prepare confidently for the challenges they will face when they are caring for dying patients

and supporting their families. Each chapter is based on a different and realistic scenario - reflecting a range of circumstances - to demonstrate the essential generic knowledge and skills they need to develop, and draws out the important practical and theoretical issues students should consider and address if patients and their families are to receive the best possible care. Written by two experienced palliative care lecturer/practitioners, and mapping closely to the NMC's 2010 domains, the book is tailored to the needs of student nurses working with adult patients. It explores the importance of their role in end-of-life care and how this interfaces with the roles of other multidisciplinary professionals involved in the care of their patients. It will also be helpful to students of other health-care professions and support newly-qualified health-care professionals working in adult health.

This book provides a basic clinical guide to the principles and practice of artificial ventilation, both manual and mechanical. It covers the development of artificial ventilation through the ages and the essential anatomy and physiology behind it. While there are many detailed texts available on mechanical ventilation, they are usually aimed at the hospital specialist and cover the many complex modes of ventilation used in the hospital setting. This book covers the basics of airway and ventilation management for non-specialists working in pre-hospital and emergency medicine. It fulfils the need for a resource that explains simply and clearly basic respiratory physiology, the pathophysiology behind respiratory failure and the practical aspects of artificial ventilation. This book links the two areas of hospital and pre-hospital practice together to promote better understanding of artificial ventilation by medical, paramedical and nursing personnel working in different fields of medicine.

The Pre-hospital Obstetric Emergency Training (POET) programme provides an introduction to the obstetric patient and the anatomical and physiological changes that occur during pregnancy (including interpretation of patient-held records and rapid assessment of the obstetric patient). It includes clear definitions and describes risk factors, diagnosis and pre-hospital management of significant problems that occur in both early and late pregnancy and the immediate postnatal period. These are all situations that the pre-hospital practitioner may attend. This text and the accompanying integrated on-line and 'hands on' course will help practitioners identify and manage a range of time-critical obstetric emergencies specifically in the pre-hospital setting, and provides a structured examination and assessment technique as an aid to determining what treatments should be provided before transport, as well as when and how urgently transport should be initiated. POET is of relevance to paramedics, ambulance staff, doctors, and nurses working in the emergency pre-hospital setting and to midwives facilitating home births. It will also be of considerable value to medical and nursing practitioners working in Emergency Departments and unscheduled care settings where immediate access to skilled obstetric assistance is not available.

Into the Breach is the true story of paramedics, emergency medical technicians, and heavy-rescue specialists fighting to control trauma and medical emergencies in one of America's toughest and most violent cities: Newark, New Jersey. A riveting account that hauls readers on a first-hand tour of street medicine today, Into the Breach shows what really happens inside an ambulance and some of the diverse and bizarre places EMS workers tread. Through authentic accounts, every facet of emergency care is on display—from the first 911 call to patient discharge or death, including an exclusive look at what is perhaps the biggest decontamination operation ever conducted, which crews performed for victims of the September 11, 2001 terrorist attack. A hybrid profession that blends public safety and public health, EMS attracts careerists and volunteers from all sectors of society—from Boy Scouts and housewives to Fortune 500 vice presidents and work-fare recipients. The men and women that make up the Newark EMS graveyard shift, one of the busiest, full-time teams in the nation, are quintessential EMS workers: intense, irreverent, hard-working action junkies who crave autonomy and the instant gratification of solving critical problems in real time. This unflinching profile hones in on award-winning EMS workers as well as those who pollute the industry, ironically, sometimes one and the same. Into the Breach offers an unusual opportunity to bear witness to unimaginable suffering, heroic stoicism, and the inventiveness of American EMS workers fighting to save lives.

TRUE LIFE-AND-DEATH DRAMA In taut, thrilling prose, Peter Canning has written a book that captures the rarely seen real world of emergency medicine. A seasoned paramedic who fights under enormous pressure to save lives, Canning trains new paramedics for the rigors of a nonstop, action-packed battle. From a four-month-old baby who has stopped breathing to a sixty-seven-year-old woman with a strange abdominal mass that threatens to explode—these are gripping true stories from the "ER on the streets." An exciting, often moving account, Canning tells a powerful story of camaraderie, selflessness, and courage as paramedics try to stand tall and human through both defeat and victory.

Packed with valuable support materials, this textbook is a comprehensive learning tool for both first time and refresher paramedic students containing everything in one convenient volume. A concise and accessible text designed for paramedics and student paramedics looking for a quick reference guide to key assessment skills

Care for patients who have suffered major trauma, for example following a road accident or a fall, has not significantly improved in the last 20 years despite numerous reports identifying

poor practice, and services are not being delivered efficiently or effectively. Survival rates vary significantly, with a range from five unexpected survivors to eight unexpected deaths per 100 trauma patients, reflecting the variable quality of care. 450 to 600 lives could be saved each year in England if major trauma care was managed more effectively. For best outcomes care should be led by consultants experienced in major trauma; but major trauma is most likely to occur at night and at weekends, when consultants are not normally in the emergency department. Major trauma care is not coordinated and there are no formal arrangements for taking patients directly for specialist treatment or transferring them between hospitals. A significant number of patients that need a scan CT do not receive one. Not enough patients who need a critical care bed are given one. Access to rehabilitation services varies and patients are not always receiving the care that they need. The estimated annual lost economic output from deaths and serious injuries from major trauma is between £3.3 billion and £3.7 billion. Only 60 per cent of hospitals delivering major trauma care contribute to the Trauma Audit and Research Network (TARN). The performance of the 40 per cent of hospitals that do not submit data to TARN cannot be measured.

Divine Doctors and Dreadful Distempers examines the discourse of seventeenth-century English physicians to demonstrate that physicians utilized cultural attitudes and beliefs to create medical theory. They meshed moralism with medicine to self-fashion an image of themselves as knowledgeable health experts whose education assured good judgment and sage advice, and whose interest in the health of their patients surpassed the peddling of a single nostrum to everyone. The combination of morality with medicine gave them the support of the influential godly in society because physicians' theories about disease and its prevention supported contemporary concerns that sinfulness was rampant. Particularly disturbing to the godly were sins deemed most threatening to the social order: lasciviousness, ungodliness, and unruliness, all of which were most clearly and threateningly manifested in the urban poor. Physicians' medical theories and suggestions for curbing some of the most feared and destructive diseases in the seventeenth century, most notably plague and syphilis, focused on reforming or incarcerating the sick and sinful poor. Doing so helped propel physicians to an elevated position in the hierarchy of healers competing for patients in seventeenth-century England.

The purpose of this book is to provide nurses and other health workers with knowledge of the structure and functions of the human body and the changes that take place when diseases disrupt normal processes. Its purpose is to describe, not prescribe - medical treatment is not included.

"This is an excellent text which covers all of the important research methods in the field, including randomised control trials. A strong component of the text is the inclusion of chapters on ethics and the future of paramedic research... The use of paramedic examples throughout the chapters will help students and other budding paramedic researchers connect with the subject matter and help them link theory, evidence and practice." Professor Peter O'Meara, La Trobe Rural Health School, La Trobe University, Australia This practical book provides a no nonsense guide for student and qualified paramedics looking to understand the key elements of research, and what it means for their profession. The authors explain key concepts and methodologies to help you get to grips with the nature of paramedic research and how it works in practice. By drawing on a wealth of cases and examples, research is placed firmly in the context of clinical practice. The book will enable you to critique research and to engage in small-scale research projects of your own. Emphasising what you need to know, the book includes information on: Knowledge that underpins practice Key elements of qualitative and quantitative research Research ethics and evidence based practice Undertaking a literature review Dissemination of research findings Considerations of the future for paramedic research Written by experienced lecturers, the authors offer practical advice and tips to more

advanced researchers on getting work published and giving oral and poster presentations at conferences. Contributors: Jayne Cutter, Gary Rolfe, Megan Rosser, Julia Williams, Malcolm Woollard

The Department of Health has until recently been focusing on speed of response as a measure of performance of the ambulance service, rather than on clinical outcomes for patients. The ambulance service achieves high levels of public satisfaction but there are wide variations in ambulance trusts' efficiency and the NAO concludes that the system has not delivered the best value for money to date. The 8-minute response target, intended for the most seriously ill patients, is one of the most demanding in the world. However, its application has skewed ambulance trusts' approach to performance measurement and management. The target is also applied to a much wider group of patients than intended. The report identifies various inefficiencies in the system, with cost per incident varying between £176 and £251. There is scope across the urgent and emergency care system to make more of different ways of responding to patients, such as clinical advice to callers over the phone and taking patients to minor injuries units rather than A&E departments. If all 11 trusts adopted the best practice currently being used in at least one trust, the NHS could save £165 million a year. The elements of the emergency care system are not yet fully integrated and this leads to delays in turnaround times at hospital A&Es. Over one-fifth of patient handovers take longer than the recommended 15 minutes. The new clinical quality indicators introduced from April offer the potential for a fuller measurement of performance based on outcomes.

Ambulance Care Essentials (ACE) is a new book for emergency care assistants and others working in ambulance services within the NHS and private sectors. The book

and online materials cover the content that you need to know in order to be an effective member of the ambulance crew. Important theoretical aspects of the role, such as the principles of communication, legal, ethical and professional issues and health and safety are explained in detail. However, this is a practical job and you will learn how to undertake safe manual handling, conduct a scene and patient assessment, and perform practical procedures such as managing an airway and assessing a patient's breathing and circulation. Supporting senior clinicians is also a key part of the emergency care assistant role, and the Ambulance Care Essentials book and online course (bought separately) have got this covered, with explanations on how to assist the paramedic with advanced airway techniques and obtaining intravenous cannulation. Other topics included in the Ambulance Care Essentials book and course ensure comprehensive coverage of the topics and patient populations that you will encounter, and includes: medical emergencies and trauma, cardiac arrest, obstetrics, paediatrics and older people.

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the

preparation, management and support elements of dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.

Diabetes Mellitus is a chronic disease affecting a large percentage of the population world-wide. In the UK alone there are over 1.4million people diagnosed with diabetes, a new diagnosis of type 2diabetes is made every five minutes, and as many as a millionpeople are suspected to have the condition without knowing it. Asmany as one in ten patients in hospital have diabetes and diabetesaccounts for almost a tenth of NHS spending, largely due to thehigh costs of complications such as heart disease, blindness,kidney disease, stroke, and amputation which all require specialistnursing care. This manual is an essential guide to the care and management ofpeople with diabetes mellitus, aimed at nurses and healthcareprofessionals, and written by an experienced clinical nursespecialist with extensive knowledge of evidence-based diabetescare. This revised and updated second edition of Care of Peoplewith Diabetes serves as an essential companion to clinicalpractice with a particular emphasis on the

This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

A “raw and fascinating” novel based on the author’s experiences as a New York City paramedic during the crack epidemic—”Burke is a poet of trauma” (Publishers Weekly, starred review). *Black Flies* is the story of paramedic Ollie Cross and his first year on the job in mid-’90s Harlem. It is a ground’s eye view of life on the streets: the shootouts, the bad cops, the hopeless patients, the dark humor in bizarre circumstances, and one medic’s struggle to maintain his desire to help despite his growing callousness. It is the story of lives that hang in the balance, and of a single job with a misdiagnosed newborn that sends Cross and his partner into a life-changing struggle between good and evil. “Although *Black Flies* is a novel, it contains more reflections of lived experience than some memoirs. . . . Reading this arresting, confrontational book is like reading *Dispatches*, Michael Herr’s indelible account of his years as a reporter in Vietnam.” —The New York Times Book Review
