“An intellectual feast, learned, lucid, challenging and accessible.” —San Francisco Chronicle “Ideas crackle” in this triumphant final book of Tony Judt, taking readers on “a wild ride through the ideological currents and shoals of 20th century thought.” (Los Angeles Times) The final book of the brilliant historian and indomitable public critic Tony Judt, *Thinking the Twentieth Century* maps the issues and concerns of a turbulent age on to a life of intellectual conflict and engagement. The twentieth century comes to life as an age of ideas—a time when, for good and for ill, the thoughts of the few reigned over the lives of the many. Judt presents the triumphs and the failures of prominent intellectuals, adeptly explaining both their ideas and the risks of their political commitments. Spanning an era with unprecedented clarity and insight, *Thinking the Twentieth Century* is a tour-de-force, a classic engagement of modern thought by one of the century’s most incisive thinkers. The exceptional nature of this work is evident in its very structure—a series of intimate conversations between Judt and his friend and fellow historian Timothy Snyder, grounded in the texts of the time and focused by the intensity of their vision. Judt's astounding eloquence and range are here on display as never before. Traversing the complexities of modern life with ease, he and Snyder revive both thoughts and thinkers, guiding us through the debates that made our world. As forgotten ideas are revisited and fashionable trends scrutinized, the shape of a century emerges. Judt and Snyder draw us deep into their analysis, making us feel that we too are part of the conversation. We become aware of the obligations of the present to the past, and the force of historical perspective and moral considerations in the critique and reform of society, then and now. In restoring and indeed exemplifying the best of intellectual life in the twentieth century, *Thinking the Twentieth Century* opens pathways to a moral life for the twenty-first. This is a book about the past, but it is also an argument for the kind of future we should strive for: *Thinking the Twentieth Century* is about the life of the mind—and the mindful life. Judt's book, *Ill Fares the Land*, republished in 2021 featuring a new preface by bestselling author of *Between the World and Me* and *The Water Dancer*, Ta-Nehisi Coates.

Focuses on the ancestors of man from the shaping of flint for a cutting edge to the development of writing.

The masterworks of one of the most influential teacher-artists of the twentieth century, originally published as a limited, boxed edition in 1963, was conceived as a guide and teaching aid for artists, instructors, and students. A paperbound edition, containing the unabridged text of the original edition, plus ten representative color plates, chosen from the original silk-screen reproductions and printed by offset lithography, was published in 1971. Since those color plates have now been worn out in repeated reprintings, Mr. Albers has selected ten different color studies, with new comments, for this revised edition. "The text of *Interaction of Color* provides the careful reader with the content of Josef Albers' famous color course. His teaching is based on learning by direct perception, and not by theories or color systems. There are many books on color on the market, but no one combines eyesight with such profound insight as Josef Albers does in *Interaction of Color*."—Hannes Beckmann "The publication of this famous book in paperback is an event. . . . It is clearly written and easy to understand. . . . This book ought to be owned by any serious student or teacher, regardless of the kind of painting he does."—The Artist Play is "an occasion of pure waste: waste of time, energy, ingenuity, skill, and often of money." It is also an essential element of human social and spiritual development. In this study, Roger Caillois defines play as a voluntary activity that occurs in a pure space, isolated and protected from the rest of life. Within limits set by rules that provide a level playing field, players move toward an unpredictable outcome by responding to their opponents' actions. Caillois qualifies types of games and ways of playing, from the improvisation characteristic of children's play to the disciplined pursuit of solutions to gratuitously difficult puzzles. He also examines the means by which games become part of daily life, ultimately giving cultures their most characteristic customs and institutions.

Last year, after a preparatory meeting on Intergenerational Solidarity, we attempted to narrow the theme of this first plenary session somewhat by focussing primarily on the ways that changing relations between generations have placed increasing strain on every society's capacity to provide for the needs of the very young, the frail elderly, and the severely ill or disabled. Hence, the word & 'welfare' in the conference title.

Sixteen church historians here examine Martin Luther in an uncommon way -- not as Reformer or theologian but as pastor. Luther's work as parish pastor commanded much of his time and energy in Wittenberg. After first introducing the pastoral Luther, including his theology of the cross, these chapters discuss Luther's preaching and use of language (including humor), investigate his teaching ministry in depth, especially in light of the catechism, and explore his views on such things as the role of women, the Virgin Mary, and music. The book finally probes Luther's sentiments on monasticism and secular authority. Contributors: Charles P. Arand James M. Estes Eric W. Gritsch Robert Kolb Beth Kreitzer Robin A. Leaver Mickey L. Introspective and poignant, *The Wine of Solitude* is the most autobiographical of all of the novels from the celebrated author of *Suite Française*. Beginning in a fictionalized Kiev, *The Wine of Solitude* follows the Karol family through the Great War and the Russian Revolution, as the young Hélène grows from a dreamy, unhappy child into a strongwilled young woman. From the hot Kiev summers to the cruel winters of St Petersburg and eventually to springtime in Paris, the would-be writer Hélène blossoms, despite her mother's neglect, into a clear-eyed observer of the life around her. Here is a powerful tale of disillusionment — the story of an upbringing that produces a young woman as hard as a diamond, prepared to wreak a shattering revenge on her mother. Beginning with the basics of computers, the book provides an in-depth analysis of various constructs of C. The key topics include iterative and decision-control statements, functions, recursion, arrays, strings, pointers, structures and unions, and file management. It deals separately with the fundamental concepts of linked lists - the preferred data structure for dynamic allocation of memory. The book also includes a chapter on different searching and sorting algorithms and analysis of time and space complexity of algorithms.

Presents a new perspective for looking at history from the origins of the universe to present day.

From an award-winning anthropologist, a lively, accessible, and irreverent introduction to the field What is anthropology? What can it tell us about the world? Why, in short, does it matter? For well over a century, cultural anthropologists have circled the globe, from Papua New Guinea to California, uncovering surprising insights about how humans organize their lives and articulate their values. In the process, anthropology has done more than any other discipline to reveal what culture means and why it matters. By weaving together examples and theories from around the world, Matthew Engelke provides a lively, accessible, and at times irreverent introduction to anthropology, covering a wide range of classic and contemporary approaches, subjects, and anthropologists. Presenting memorable cases, he encourages readers to think deeply about key concepts that anthropologists use to make sense of the world. Along the way, he shows how anthropology helps us understand other cultures and points of view—but also how, in doing so, it reveals something about ourselves and our own cultures, too.

Can the way a word is used give legitimacy to a political movement? *Feminism, Violence, and Representation in Modern Italy* traces the use of the word "femminicidio" (or "femicide") as a tool to mobilize Italian feminists, particularly the Union of Women in Italy (UDI). Based on nearly two years of fieldwork among feminist activists, Giovanna Parmigiani takes a broad look at the many ways in which violence inflects the lives of women in Italy. From unchallenged gendered grammar rules to the representation of women as victims, Parmigiani examines the devaluing of women's contribution to their communities through the words and experiences of the women she interviews. She describes the first uses of the word "femminicidio" as a political term used by and within feminist circles and traces its spread to ultimate legitimization and national relevance. The word redefined women as a political subject by building an imagined community of potentially violated women. In doing so, it challenged Italians to consider the status of women in Italian society, and to make this status a matter of public debate. It also problematized the connection between women and tropes of women as objects of suffering and victimhood. Parmigiani considers this exchange within the context of Italian Catholic heritage, a precarious economy, and long-held notions of honor and shame. Parmigiani provides a careful and searing consideration of the ways in which representations of violence and the politics of this representation are shaping the future of women in Italy and beyond.

The Development of an Extraordinary Species We human beings share 98 percent of our genes with chimpanzees. Yet humans are the dominant species on the planet -- having founded civilizations and religions, developed intricate and diverse forms of communication, learned science, built cities, and created breathtaking works of art -- while chimps remain animals concerned primarily with the basic necessities of survival. What is it about that two percent difference in DNA that has created such a divergence between evolutionary cousins? In this fascinating, provocative, passionate, funny, endlessly entertaining work, renowned Pulitzer Prize-winning author and scientist Jared Diamond explores how the extraordinary human animal, in a remarkably short time, developed the capacity to rule the world . . . and the means to irrevocably destroy it.

Although Daniel Everett was a missionary, far from converting the Pirahns, they converted him. He shows the slow, meticulous steps by which he gradually mastered their language and his gradual realization that its unusual nature closely reflected its speakers' startlingly original perceptions of the world. Everett describes how he began to realize that his discoveries about the Pirah language opened up a new way of understanding how language works in our minds and in our lives, and that this way was utterly at odds with Noam Chomsky's universally accepted linguistic theories. The perils of passionate academic opposition were then swiftly conjoined to those of the Amazon in a debate whose outcome has yet to be won. Everett's views are most recently discussed in Tom Wolfe's bestselling *The Kingdom of Speech*. Adventure, personal enlightenment and the makings of a scientific revolution proceed together in this vivid, funny and moving book.

In a first-of-its-kind format, *Cultural Anthropology: A Problem-Based Approach* is organized by problems and questions rather than topics, creating a natural discussion of

traditional anthropological concerns such as kinship, caste, gender roles, and religion. This brief text promotes critical thinking through meaningful exercises, case studies, and simulations. Readers will learn how to analyze their own culture and gain the tools to understand the cultures of other societies. The Eighth Edition has been thoroughly updated and reorganized to emphasize contemporary issues around social and economic inequality, gender identity, and more.

This volume is devoted to exploring a subject which, on the surface, might appear to be just a trending topic. In fact, it is much more than a trend. It relates to an ancient, permanent issue which directly connects with people's life and basic needs: the recognition and protection of individuals' dignity, in particular the inherent worthiness of the most vulnerable human beings. The content of this book is described well enough by its title: 'Human Dignity of the Vulnerable in the Age of Rights'. Certainly, we do not claim that only the human dignity of vulnerable people should be recognized and protected. We rather argue that, since vulnerability is part of the human condition, human vulnerability is not at odds with human dignity. To put it simply, human dignity is compatible with vulnerability. A concept of human dignity which discards or denies the dignity of the vulnerable and weak is at odds with the real human condition. Even those individuals who might seem more skilled and talented are fragile, vulnerable and limited. We need to realize that human condition is not limitless. It is crucial to re-discover a sense of moderation regarding ourselves, a sense of reality concerning our own nature. Some lines of thought take the opposite view. It is sometimes argued that humankind is – or is called to be – powerful, and that the time will come when there will be no vulnerability, no fragility, no limits at all. Human beings will become like God (or what believers might think God to be). This perspective rejects human vulnerability as an intrinsic evil. Those who are frail or weak, who are not autonomous or not able to care for themselves, do not possess dignity. In this volume it is claimed that vulnerability is an inherent part of human condition, and because human dignity belongs to all individuals, laws are called to recognize and protect the rights of all of them, particularly of those who might appear to be more vulnerable and fragile.

This book re-establishes the relevance of mainstream anthropological (and sociological) approaches to development processes and simultaneously recognizes that contemporary development ought to be anthropology's principal area of study. Professor de Sardan argues for a socio-anthropology of change and development that is a deeply empirical, multidimensional, diachronic study of social groups and their interactions. The Introduction provides a thought-provoking examination of the principal new approaches that have emerged in the discipline during the 1990s. Part I then makes clear the complexity of social change and development, and the ways in which socio-anthropology can measure up to the challenge of this complexity. Part II looks more closely at some of the leading variables involved in the development process, including relations of production; the logics of social action; the nature of knowledge; forms of mediation; and 'political' strategies.

What do eggs, flour, and milk have in common? They form the basis of crepes of course, but they also each have an evolutionary purpose. Eggs, seeds (from which flour is derived by grinding) and milk are each designed by evolution to nourish offspring. Everything we eat has an evolutionary history. Grocery shelves and restaurant menus are bounteous evidence of evolution at work, though the label on the poultry will not remind us of this with a Jurassic sell-by date, nor will the signs in the produce aisle betray the fact that corn has a 5,000 year history of artificial selection by pre-Colombian Americans. Any shopping list, each recipe, every menu and all ingredients can be used to create culinary and gastronomic magic, but can also each tell a story about natural selection, and its influence on our plates--and palates. Join in for multiple courses, for a tour of evolutionary gastronomy that helps us understand the shape of our diets, and the trajectories of the foods that have been central to them over centuries--from spirits to spices. This literary repast also looks at the science of our interaction with foods and cooking--the sights, the smells, the tastes. The menu has its eclectic components, just as any chef is entitled. But while it is not a comprehensive work which might risk gluttony, this is more than an amuse bouche, and will leave every reader hungry for more.

Before there was Lois Lowry's *The Giver* or M. T. Anderson's *Feed*, there was Robert Cormier's *I Am the Cheese*, a subversive classic that broke new ground for YA literature. A boy's search for his father becomes a desperate journey to unlock a secret past. But the past must not be remembered if the boy is to survive. As he searches for the truth that hovers at the edge of his mind, the boy—and readers—arrive at a shattering conclusion. "An absorbing, even brilliant job. The book is assembled in mosaic fashion: a tiny chip here, a chip there. . . . Everything is related to something else; everything builds and builds to a fearsome climax. . . . Simians, Cyborgs and Women is a powerful collection of ten essays written between 1978 and 1989. Although on the surface, simians, cyborgs and women may seem an odd threesome, Haraway describes their profound link as "creatures" which have had a great destabilizing place in Western evolutionary technology and biology. Throughout this book, Haraway analyzes accounts, narratives, and stories of the creation of nature, living organisms, and cyborgs. At once a social reality and a science fiction, the cyborg--a hybrid of organism and machine--represents transgressed boundaries and intense fusions of the nature/culture split. By providing an escape from rigid dualisms, the cyborg exists in a post-gender world, and as such holds immense possibilities for modern feminists. Haraway's recent book, *Primate Visions*, has been called "outstanding," "original," and "brilliant," by leading scholars in the field. (First published in 1991.)

Deep China investigates the emotional and moral lives of the Chinese people as they adjust to the challenges of modernity. Sharing a medical anthropology and cultural psychiatry perspective, Arthur Kleinman, Yunxiang Yan, Jing Jun, Sing Lee, Everett Zhang, Pan Tianshu, Wu Fei, and Guo Jinhua delve into intimate and sometimes hidden areas of personal life and social practice to observe and narrate the drama of Chinese individualization. The essays explore the remaking of the moral person during China's profound social and economic transformation, unraveling the shifting practices and struggles of contemporary life.

Alcoholism, as opposed to the safe consumption of alcohol, remains a major public health issue. In this accessible book, Robert Dudley presents an intriguing evolutionary interpretation to explain the persistence of alcohol-related problems. Providing a deep-time, interdisciplinary perspective on today's patterns of alcohol consumption and abuse, Dudley traces the link between the fruit-eating behavior of arboreal primates and the evolution of the sensory skills required to identify ripe and fermented fruits that contain sugar and low levels of alcohol. In addition to introducing this new theory of the relationship of humans to alcohol, the book discusses the supporting research, implications of the hypothesis, and the medical and social impacts of alcoholism. *The Drunken Monkey* is designed for interested readers, scholars, and students in comparative and evolutionary biology, biological anthropology, medicine, and public health.

Meeting House Essays in a series of papers reflecting on the mystery, beauty and practicalities of the place of worship. This popular series was begun in 1991, and each resource focuses on a particular aspect of space, design or materials and how they relate to the liturgy.

Pulling together the most salient, current issues in the field today, *The Handbook of Gangs* provides a significant assessment by leading scholars of key topics related to gangs, gang members, and responses to gangs. • Chapters cover a wide array of the most prominent issues in the field of gangs, written by scholars who have been leaders in developing new ways of thinking about the topics • Delivers cutting-edge reviews of the current state of research and practice and addresses where the field has been, where it is today and where it should go in the future • Includes extensive coverage of the individual theories of delinquency and provides special emphasis on policy and prevention program implications in the study of gangs • Offers a broad understanding of how other countries deal with gangs and their response to gangs, including Great Britain, Latin America, Australia and Europe • Chapters covering the legacies of four pioneers in gang research—Malcolm W. Klein, Walter B. Miller, James F. Short Jr., and Irving A. Spergel "The Naked Man is the fourth and final volume [of *Mythologiques*], written by the most influential and probably the most controversial anthropologist of our time. . . . Myths from North and South America are set side by side to show their transformations: in passing from person to person and place to place, a myth can change its content and yet retain its structural principles. . . . Apart from the complicated transformations discovered and the fascinating constructions placed on these, the stories themselves provide a feast."—Betty Abel, *Contemporary Review* "Lévi-Strauss uses the structural method he developed to analyze and 'decode' the mythology of native North Americans, focusing on the area west of the Rockies. . . . [The author] takes the opportunity to refute arguments against his method; his chapter 'Finale' is a defense of structural analysis as well as the closing statement of this four-volume opus which started with an 'Ouverture' in *The Raw and the Cooked*."—*Library Journal* "The culmination of one of the major intellectual feats of our time."—Paul Stuewe, *Quill and Quire*

The emergence of symbolic culture, classically identified with the European cave paintings of the Ice Age, is now seen, in the light of recent groundbreaking discoveries, as a complex nonlinear process taking root in a remote past and in different regions of the planet. In this book the archaeologists responsible for some of these new discoveries, flanked by ethologists interested in primate cognition and cultural transmission, evolutionary psychologists modelling the emergence of metarepresentations, as well as biologists, philosophers, neuro-scientists and an astronomer combine their research findings. Their results call into question our very conception of human nature and animal behaviour, and they create epistemological bridges between disciplines that build the foundations for a novel vision of our lineage's cultural trajectory and the processes that have led to the emergence of human societies as we know them.

A "riveting and illuminating" Bill Gates Summer Reading pick about how and why some nations recover from trauma and others don't (Yuval Noah Harari), by the Pulitzer Prize-winning author of the landmark bestseller *Guns, Germs, and Steel*. In his international bestsellers *Guns, Germs and Steel* and *Collapse*, Jared Diamond transformed our understanding of what makes civilizations rise and fall. Now, in his third book in this monumental trilogy, he reveals how successful nations recover from crises while adopting selective changes -- a coping mechanism more commonly associated with individuals recovering from personal crises. Diamond compares how six countries have survived recent upheavals -- ranging from the forced opening of Japan by U.S. Commodore Perry's fleet, to the Soviet Union's attack on Finland, to a murderous coup or countercoup in Chile and Indonesia, to the transformations of Germany and Austria after World War Two. Because Diamond has lived and spoken the language in five of these six countries, he can present gut-wrenching histories experienced firsthand. These nations coped, to varying degrees, through mechanisms such as acknowledgment of responsibility, painfully honest self-appraisal, and learning from models of other nations. Looking to the future, Diamond examines whether the United States, Japan, and the whole world are successfully coping with the grave crises they currently face. Can we learn from lessons of the past? Adding a psychological dimension to the in-depth history, geography, biology, and anthropology that mark all of Diamond's books, *Upheaval* reveals factors influencing how both whole nations and individual people can respond to big challenges. The result is a book epic in scope, but also his most personal yet.

_____ As seen on Sky News All Out Politics 'There's no understanding global inequality without understanding its history. In *The Divide*, Jason Hickel brilliantly lays it out, layer upon layer, until you are left reeling with the outrage of it all.' - Kate Raworth, author of *Doughnut Economics* • The richest eight people control more wealth than the poorest half of the world combined. • Today, 60 per cent of the world's population lives on less than \$5 a day. • Though global real GDP has nearly tripled since 1980, 1.1 billion more people are now living in poverty. For decades we have been told a story: that development is working, that poverty is a natural phenomenon and will be eradicated through aid by 2030. But just because it is a comforting tale

doesn't make it true. Poor countries are poor because they are integrated into the global economic system on unequal terms, and aid only helps to hide this. Drawing on pioneering research and years of first-hand experience, *The Divide* tracks the evolution of global inequality – from the expeditions of Christopher Columbus to the present day – offering revelatory answers to some of humanity's greatest problems. It is a provocative, urgent and ultimately uplifting account of how the world works, and how it can change for the better.

A music researcher's quest to discover other musical species. Even those of us who can't play a musical instrument or lack a sense of rhythm can perceive and enjoy music. Research shows that all humans possess the trait of musicality. We are a musical species—but are we the only musical species? Is our musical predisposition unique, like our linguistic ability? In *The Evolving Animal Orchestra*, Henkjan Honing embarks upon a quest to discover if humans share the trait of musicality with other animals. Charles Darwin believed that musicality was a capacity of all animals, human and nonhuman, with a clear biological basis. Taking this as his starting point, Honing—a music cognition researcher—visits a series of biological research centers to observe the ways that animals respond to music. He has studied scientists' accounts of Snowball, the cockatoo who could dance to a musical beat, and of Ronan, the sea lion, who was trained to move her head to a beat. Now Honing will be able to make his own observations. Honing tests a rhesus monkey for beat perception via an EEG; performs a listening experiment with zebra finches; considers why birds sing, and if they intend their songs to be musical; explains why many animals have perfect pitch; and watches marine mammals respond to sounds. He reports on the unforeseen twists and turns, doubts, and oversights that are a part of any scientific research—and which point to as many questions as answers. But, as he shows us, science is closing in on the biological and evolutionary source of our musicality.
