Carbon Pollution Emission Guidelines for Existing Stationary Sources - Electric Utility Generating Units (US Environmental Protection Agency Regulation) (EPA) (2018 Edition) The Law Library presents the complete text of the Carbon Pollution Emission Guidelines for Existing Stationary Sources - Electric Utility Generating Units (US Environmental Protection Agency Regulation) (EPA) (2018 Edition). Updated as of May 29, 2018 In this action, the Environmental Protection Agency (EPA) is establishing final emission guidelines for states to follow in developing plans to reduce greenhouse gas (GHG) emissions from existing fossil fuel-fired electric generating units (EGUs). Specifically, the EPA is establishing: Carbon dioxide (CO₂) emission performance rates representing the best system of emission reduction (BSER) for two subcategories of existing fossil fuel-fired EGUs-fossil fuel-fired electric utility steam generating units and stationary combustion turbines; state-specific CO₂ goals reflecting the CO₂ emission performance rates; and guidelines for the development, submittal and implementation of state plans that establish emission standards or other measures to implement the CO₂ emission performance rates, which may be accomplished by meeting the state goals. This final rule will continue progress already underway in the U.S. to reduce CO₂ emissions from the utility power sector. Compostable Polymer Materials, Second Edition, deals with the environmentally important family of polymers designed to be disposed of in industrial and municipal compost facilities after their useful life. These compostable plastics undergo degradation and leave no visible, distinguishable, or toxic residue. Environmental concerns and legislative measures taken in different regions of the world make composting an increasingly attractive route for the disposal of redundant polymers. This book covers the entire spectrum of preparation, degradation, and environmental issues related to compostable polymers. It emphasizes recent studies concerning compostability and ecotoxicological assessment of polymer materials. It describes the thermal behavior, including flammability properties, of compostable polymers. It also explores possible routes of compostable polymers waste disposal through an ecological lens. Finally, the book examines the economic factors at work, including price evolution over the past decade, the current market, and future perspectives. Compostable Polymer Materials is an essential resource for graduate students and scientists working in chemistry, materials science, ecology, and environmental science. Provides a comprehensive study of the composting process Details methods of compostable polymers preparation, including properties, processing and applications Presents the state-of-the-art knowledge on ecotoxicity testing and biodegradation under real composting conditions of compostable polymers, as well as biodegradation in various environments, such as marine environments and anaerobic conditions Discusses the evolution of waste management in Europe and the United States, as well as the status of MSW disposal and treatment methods in countries such as China and Brazil Overviews biodegradation studies under real composting conditions of products made of compostable polymers, e.g. bags, bottles, cutlery Analyzes evolution of market development, including price of compostable polymers during the last decade

Member States of the European Union have always insisted on their unrestricted national sovereignty. This book focuses on the crucial issue of the balance between the imperatives of the fundamental economic freedoms of the EC Treaty and the legitimate national interests of the Member States in protecting their national tax systems. The book, based on the proceedings of the annual conference of the European Association of Tax Law Professors (EATLP) held in Paris in June 2004, has been divided into the following four major subject areas: - the significance of the prohibitions of discrimination and restriction within the framework of the fully integrated market; - the lessons to be learned for taxation from the application of these prohibitions in areas other than taxation; - the basis and scope of the public interest justification advanced by the Member States for tax measures violating the fundamental freedoms; and the compatibility of the "national tax principles of the Member States" with a fully integrated market. Attention is also given to the adaptation of the tax systems of three major new Member States (the Czech Republic, Hungary and Poland) to the requirements of the "acquis communautaire". Finally, there is a special contribution on the effect of the prohibitions

of discrimination and restriction in non-EU countries (Norway and Switzerland). This book presents a comprehensive study of the tax issues that play a decisive role in the making or breaking of the European Economic and Monetary Union.

Due to the strong inroads that Western scientism and Western Christianity have made in Africa as a result of colonialism, post-colonial African governments have tended to rely solely on Western scientific conservation epistemologies and models to the neglect of those of the Indigenous African peoples in addressing their environmental problems. However, there is enough evidence that neither modern (scientific) nor indigenous epistemologies and modes of addressing current ecological problems ar... This book attempts a coherent portrait of the heart of Japan's economic and political decision making. It presents the men occupying the core positions in Japan's ruling party, the central ministries, and in big business and its organizations. Elite career patterns, social origins, upbringing, university education, cognitive orientations and ways of life are reviewed, as are the interactions in the exclusive world of Japan's increasingly hereditary and bureaucratic class of power holders in conservative politics and big business.

By featuring the life histories of eight senior men, *Making Men in Ghana* explores the changing meaning of becoming a man in modern Africa. Stephan F. Miescher concentrates on the ideals and expectations that formed around men who were prominent in their communities when Ghana became an independent nation. Miescher shows how they negotiated complex social and economic transformations and how they dealt with their mounting obligations and responsibilities as leaders in their kinship groups, churches, and schools. Not only were notions about men and masculinity shaped by community standards, but they were strongly influenced by imported standards that came from missionaries and other colonial officials. As he recounts the life histories of these men, Miescher reveals that the passage to manhood -- and a position of power, seniority, authority, and leadership -- was not always welcome or easy. As an important foil for studies on women and femininity, this groundbreaking book not only explores masculinity and ideals of male behavior, but offers a fresh perspective on African men in a century of change.

As we enter the last decades of the twentieth century, many persistent and perplexing problems continue to afflict humankind. Thus it is appropriate to address, in a new group of books, two of the monumental issues that haunt people throughout the world. *Soils and the Environment* by Professor Gerald W. Olson is the first book in this new publishing program on Environment, Energy, and Society. The purpose of all these books will be to explore the many interrelated facets of these topics and to provide guidance for dealing with problems and offering ideas for their solutions. Environment and energy are twin problems that occupy what many believe to be opposite sides of a two-headed coin. They are often viewed as being antithetical and incompatible. The various books in this program will try to place in perspective the options that are available to those who design policy and plan and manage societal matters. Typical of books being developed currently are ones on coal resources, environmental geoscience, environmental pollution, land-use planning, nuclear energy, mineral resources, and water resources. However, because soils are

at the very heart of civilization and provide the building block for human sustenance, it is fitting to inaugurate this series with Dr. Olson's timely analysis of soils. Unfortunately, these most vital resources seem to have low priority in many farming enterprises, urbanization projects, deforestation schemes, and mining and developmental terrain changes.

Nontimber forest products (NTFPs) are fundamental to the functioning of healthy forests and play vital roles in the cultures and economies of the people of the United States. However, these plants and fungi used for food, medicine, and other purposes have not been fully incorporated into management, policy, and resource valuation. This report is a forest-sectorwide assessment of the state of the knowledge regarding NTFPs science and management information for U.S. forests and rangelands (and hereafter referred to as the NTFP assessment). The NTFP assessment serves as a baseline science synthesis and provides information for managing nontimber forest resources in the United States. In addition, this NTFP assessment provides information for national-level reporting on natural capital and the ecosystem services NTFPs provide. The report also provides technical input to the 2017 National Climate Assessment (NCA) under development by the U.S. Global Change Research Program (USGCRP).

Technical analysts build trading strategies based on trends and patterns in the markets' movements. Their task requires mastery of the world's markets and an understanding of the latest techniques. Breakthroughs in Technical Analysis reveals the new trading methods used by the world's top technicians. Building on the success of *New Thinking in Technical Analysis* (Bloomberg Press, 2000), this book, edited by Bloomberg L.P.'s own expert on technical analysis, David Keller, brings together market masters from the around the world. Some of their techniques have never left their country's borders before and are not widely known or used in other parts of the world. Showing what the best and the brightest are currently using to deliver extraordinary results, this book will be eagerly sought out by all market technicians.
