Since the early 1980s there has been an explosion of auditing activity in the United Kingdom and North America. In addition to financial audits there are now medical audits, technology audits, value for money audits, environmental audits, quality audits, teaching audits, and many others. Why has this happened? What does it mean when a society invests so heavily in an industry of checking and when more and more individuals find themselves subject to formal scrutiny? The Audit Society argues that the rise of auditing has its roots in political demands for accountability and control. At the heart of a new administrative style internal control systems have begun to play an important public role and individual and organizational performance has been increasingly formalized and made auditable. Michael Power argues that the new demands and expectations of audits live uneasily with their operational capabilities. Not only is the manner in which they produce assurance and accountability open to question but also, by imposing their own values, audits often have unintended and dysfunctional consequences for the audited organization.

According to recent estimates, around 6,000 people – mostly children under five – die every day from diseases caused by inappropriate water and sanitation (WS) services. Much of the academic and political debate surrounding this issue has focused on private sector participation. By shifting the attention towards the influence of governance, Krause examines the political and sectoral institutions that are essential for the provision of WS services. Utilizing data from sixty-nine developing countries, Matthias Krause demonstrates that the level of democracy has a statistically significant

positive impact on access to WS services and that low-quality governance of sub-national governments compromises the internal efficiency of providers and the widespread access to services. This book makes a critical contribution to the water and sanitation research and will help academics and policy-makers to rethink the way in which they deal with water issues.

developed and developing world, explores one of the most salient features of contemporary international relations: South-South cooperation. It builds on existing empirical evidence and offers a comparative analytical framework to critically analyse the aid policies and programmes of ten rising donors from the global South. Amongst these are several BRICS (Brazil, India, China and South Africa) but also a number of less studied countries, including Cuba, Venezuela, the United Arab Emirates, Colombia, Turkey, and Korea. The chapters trace the ideas, identities and actors that shape contemporary South-South cooperation, and also explore potential differences and points of convergence with traditional North-South aid. This thought-provoking edited collection will appeal to students and scholars of international relations, international political economy, development, economics, area studies and business. /div

Corporate Finance, by Ross, Westerfield, and Jaffe emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return,

and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. The ninth edition has been fully updated to reflect the recent financial crisis and is now accompanied by Connect, an exciting new homework management system.

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home.

Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses,

one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

Describes the origin of the Eurocentric global order, which Schmitt dates from the discovery of the New World, discusses its specific character and its contribution to civilization, analyzes the reasons for its decline at the end of the 19th century, and concludes with prospects for a new world order. It is a reasoned, yet passionate argument in defense of the European achievement, not only in creating the first truly global order of international law, but also in limiting war to conflicts among sovereign states, which in effect civilized war.
