The service sector accounts for a huge proportion of global employment, and is the biggest driver of gross domestic product in developing nations. This is especially true for Africa, which has seen a strong growth trajectory in recent years. This book presents a new frontier of research, offering insightful perspectives on the 21st-century realities of the service sector and its effect on economic development in Africa. The analysis presented here will be of relevance to academics and policymakers with an interest in Africa's role in the global economy.

The Open Economy Macromodel: Past, Present And Future has two main objectives. The first is to assess the state of play of the Open Economy Macromodel by bringing together those who developed it with those who apply it today. The second is to assess possible directions for its future development. The volume is divided into three parts. Part one focuses on the models, men, and institutions involved in the development of the international macroeconomic model. In this section, the contributors examine the two monetary approaches to the balance of payments, as well as the relationship between long-term fluctuations in real exchange rates and inflation. Part two deals with the present state of the models by looking at Robert Mundell's theory of optimum currency areas (OCAs) and its relationship with key currencies. The chapters in this section also consider the impact of exchange rate variability on labor markets, as well as the interactions between theoretical developments and real-world behavior in the open economy macromodel. The third and last part of this volume provides a perspective on the future by looking at alternate models and institutional perspectives. Several contributors examine the relationship between asset prices, the real exchange rate, and unemployment in a small economy via what they call "a medium-run structuralist perspective". The future of institutional structures necessary to conduct international economic policy is the subject of the last chapters in part three of the volume.

A theoretical analysis of international trade and industrial policy, developing and using new models of trade with imperfect competition. Modeling of imperfect competition within international trade has been difficult until recent breakthroughs in this area, which have provided a more realistic view of the world economy. The book builds on the advances provided by such tools as game theory and the theory of monopolistic competition. The first section covers broad and basic trade issues which arise under imperfect competition. Section two examines implications for trade policy covering issues such as strategic trade policy in static and dynamic settings. Section three deals with various structural issues, such as optimal choice of trade liberalizing policies, the formation of trade blocks, and open dualistic economy with externalities.

During the first three decades following the Second World War, an increasingly open international trading system led to unprecedented economic growth throughout the world. But in recent years, that openness has been threatened by increased protectionism, regional trading arrangements—Europe 1992 and the U.S.-Canada Free Trade Agreement—and setbacks in negotiations on the General Agreement on Tariffs and Trade. In *Trade and Protectionism*, American and East Asian scholars consider the dangers of this trend for the world economy and especially for East Asian countries. The authors look at the current global trading system and at the potential threats to East Asian economies from possible regional arrangements, such as separate trading blocks in the Western Hemisphere and Europe. They cover trade between the United States and Japan, Korea and Japan, and Japanese-East Asian trade policies; trade in agriculture and semiconductors and the frictions that have jeopardized this trade; and direct foreign investment. The contributors round out the work with discussions of the political economy of protection in Korea and Taiwan and political economy considerations as they affect trade policy in general. This is the second volume of the National Bureau of Economic Research-East Asia Seminar on Economics. The first volume, *The Political Economy of Tax Reform*, also edited by Takatoshi Ito and Anne O. Krueger, addresses tax reform in the global economy.
