This classic text covers all the conventional areas of international economics in an easy-to-understand manner. The 13th edition continues to provide the best blend of events and analysis, so that readers can build their abilities to understand global economic developments and to evaluate proposals for changes in economic policies. Despite troubled trade negotiations, global trade—and trade policy—will thrive in the twenty-first century, but with a bow to the past. Is the multilateral trading order of the twentieth century a historical artifact? Was the creation of the World Trade Organization in 1995 the high point of multilateral cooperation on trade? This new volume, edited by Bernard M. Hoekman and Ernesto Zedillo, assesses the relevance of the WTO in the context of the rise of China and the United States' turn toward unilateral protectionism. The contributors adopt a historical perspective to discuss changes in global trade policy trends, adducing lessons from the past to help understand current trade tensions. Topics include responses to U.S. protectionism under the Trump administration, the policy dimensions of trade in services and the rise of the digital economy, how to strengthen the WTO to better negotiate new rules of the game and adjudicate disputes, managing China's integration into the global trade system, and the implications of global value chains for economic development policies. By reflecting on past episodes of protectionism and how they were resolved, *Trade in the 21st Century* provides both context and guidance on how trade challenges can be addressed in the coming decades. This book is based on the International Conference on Decision Economics (DECON 2019). Highlighting the fact that important decision-making takes place in a range of critical subject areas and research fields, including economics, finance, information systems, psychology, small and international business, management, operations, and production, the book focuses on analytics as an emerging synthesis of sophisticated methodology and large data systems used to guide economic decision-making in an increasingly complex business environment. DECON 2019 was organised by the University of Chieti-Pescara (Italy), the National Chengchi University of Taipei (Taiwan), and the University of Salamanca (Spain), and was held at the Escuela politécnica Superior de Ávila, Spain, from 26th to 28th June, 2019. Sponsored by IEEE Systems Man and Cybernetics Society, Spain Section Chapter, and IEEE Spain Section (Technical Co-Sponsor), IBM, Indra, Viewnext, Global Exchange, AEPIA-and-APPIA, with the funding supporting of the Junta de Castilla y León, Spain (ID: SA267P18-Project co-financed with FEDER funds)

Renowned for its authoritative, comprehensive coverage of contemporary international finance, *Multinational Business Finance* trains the leaders of tomorrow's multinational enterprises to recognize and capitalize on the unique characteristics of global markets. The 15th Edition attempts to capture the rapid evolution of our global marketplace, taking a closer look at the types of organizations that permeate the widespread arena, competition, and opportunities in emerging markets, and how

financial leadership can integrate the strategic and financial challenges that global businesses face today.

Paul Kennedy's classic naval history, now updated with a new introduction by the author This acclaimed book traces Britain's rise and fall as a sea power from the Tudors to the present day. Challenging the traditional view that the British are natural 'sons of the waves', he suggests instead that the country's fortunes as a significant maritime force have always been bound up with its economic growth. In doing so, he contributes significantly to the centuries-long debate between 'continental' and 'maritime' schools of strategy over Britain's policy in times of war. Setting British naval history within a framework of national, international, economic, political and strategic considerations, he offers a fresh approach to one of the central questions in British history. A new introduction extends his analysis into the twenty-first century and reflects on current American and Chinese ambitions for naval mastery. 'Excellent and stimulating' Correlli Barnett 'The first scholar to have set the sweep of British Naval history against the background of economic history' Michael Howard, Sunday Times 'By far the best study that has ever been done on the subject ... a sparkling and apt quotation on practically every page' Daniel A. Baugh, International History Review 'The best single-volume study of Britain and her naval past now available to us' Jon Sumida, Journal of Modern History Now in its Thirteenth Edition, this proven, market-leading text remains a favorite among students and instructors alike for its clear, concise treatment of international trade and finance theory. Using a wealth of contemporary examples and practical applications, GLOBAL ECONOMICS, 13e, International Edition vividly demonstrates the relevance of theory to real-world economic issues and policy questions. Discussions are presented both verbally and graphically, making the text highly accessible even for students with little economics background, and a flexible format makes the text suitable for a wide range of course structures and subjects. As delighted students and instructors have discovered, "if it's clear, concise and contemporary, it has to be Carbaugh!"

This volume approaches China's Belt and Road Initiative as a process of culturalization, one that started with the Silk Road and continued over the millennium. In mainstream literature, the Belt and Road Initiative (BRI) has been portrayed as the geo-economic vision and geo-political ambition of China's current leaders, intended to shape the future of the world. However, this volume argues that although geo-politics and geo-economy may play their part, the BRI more importantly creates a venue for the meeting of cultures by promoting people-to-people

interaction and exchange. This volume explores the journey from the Silk-Road to Belt-Road by analyzing topics ranging from history to religion, from language to culture, and from environment to health. As such, scholars, academics, researchers, undergraduate and graduate students from the Humanities, Social Sciences, and Business will find an alternative approach to the Belt and Road Initiative.

Agricultural Policy in the US: Evolution and Economics traces the foundation of US agricultural policy from its colonial roots to the present, using economic concepts to analyze and interpret political and economic consequences. Ancient Roman food and agricultural reform, English Corn Law and other historic examples of agricultural policies are included to show that agricultural policy has a long history and has been found necessary for governance throughout history. Processes employed to develop US agricultural policies, the structure and function of government that develops and implements agricultural policy, and the specific evolution of policy from the early twentieth century to the Agricultural Act of 2014 are included. Specific policies in past farm bills are detailed in order to track their evolution and economic effects. This textbook includes arguments for and against common tools of US agricultural policy. This debate continues today and can be seen in a gradual change over time from taxes and tariffs to risk management. Information presented does not attempt to influence the readership towards a pro or con position but rather to present information to help the readers to understand the issues related to agricultural policy in the US.
