Although researchers from different countries have contributed to our knowledge about tasks and roles, we have limited insights into the development, education, and socio-cultural influences in different countries and surprisingly little is known

about the local and national contexts in which these roles are learned and performed. This book bridges this research gap using two complementary perspectives. The first part explores management accountants in a range of different national contexts, providing information about country-specific historical developments and educational standards as well as specific roles and tasks. The second part focusses on important global developments that will increasingly impact management accountants in the future, such as sustainability, the financial crisis, technology and changing roles. By combining local context with a global overview, this insightful volume provides an agenda for future research which will be of great interest to scholars and advanced students in management accounting throughout the world.

The book introduces pragmatic constructivism as a paradigm for understanding actors' construction of functioning practice and for developing methods and concepts for managing and observing that practice. The book explores, understands and theorises organisational practices as constructed through the activities of all organisational actors. Actors always act under presumptions of a specific actor-world-relation which they continuously construct, adjust and reconstruct in light of new experiences, contexts and communication. The outcome of the actor-world-relation is a reality construction. The reality construction may function successfully or it may be hampered by fictitious and illusionary elements, due to missing or faulty actor-world relations. The thesis is that four dimensions of reality – facts, possibilities, values and communication – must be integrated in the actor-world-relation if the construct is to form a successful basis for effective, functioning actions. Drawing on pragmatic constructivism, the book provides concepts and ideas for studies regarding actors and their use of management accounting models in their construction of organized reality. It concentrates on researching and conceptualizing what creates functioning reality construction. It develops concept and methods for understanding, analysing and managing the actors' reality constructions. It is intended for people who do research on or work actively with developing management accounting.

Introductory Accounting adopts a measurement approach to teaching graduate students the basics of accounting. Integrating both financial and managerial principles from the U.S. and around the globe, it links accounting to other areas of business (such as finance, operations, and management). Providing students with the context to understand how and why accounting is a valuable part of business, readers will gain an understanding of accounting's role in financial analysis and managerial decision-making. Tinkelman discusses accounting as an imperfect measurement system, offering guidance on how quantitative data can benefit analysts and managers when used with an understanding of its limitations. The book is strongly grounded in research, and also draws on plenty of examples and cases to bring these issues to life. The conversational style of Introductory Accounting will appeal to MBA students, while key terms and illustrative problems make assignments easy for instructors. Whether students pursue a professional career in accounting or in other areas of management, they will interact with accounting systems. In all organizations, managers rely on management accounting systems to provide information to deal with changes in their operating environment. This book provides students and managers with an understanding and appreciation of the strengths and limitations of an organization's accounting system, and enables them to be intelligent and critical users of the system. The text highlights the role of management accounting as an integral part of the organization's strategy and not merely a set of individual concepts and computations. An analytical framework for organizational change is used throughout the book to underscore how organizations must adapt to create customer and organizational value. This framework provides a way to examine and analyze the organization's accounting system, and as a basis for evaluating proposed changes to the system. With international examples that bring the current business environment to the forefront, problems and cases to promote critical thinking, and online support for students and instructors, Management Accounting in a Dynamic Environment is no mere introductory textbook. It prepares readers to use accounting systems intelligently to achieve organizational success. The authors have identified several cases to accompany each chapter in the textbook.
