Introduction to Statistical Investigations leads students to learn about the process of conducting statistical investigations from data collection, to exploring data, to statistical inference, to drawing appropriate conclusions. The text is designed for a one-semester introductory statistics course. It focuses on genuine research studies, active learning, and effective use of technology. Simulations and randomization tests introduce statistical inference, yielding a strong conceptual foundation that bridges students to theory-based inference approaches. Repetition allows students to see the logic and scope of inference. This implementation follows the GAISE recommendations endorsed by the American Statistical Association.

With ANTHOLOGY OF WORLD SCRIPTURES, 9th Edition your students will encounter the most notable and instructive sacred texts from major world religions, including Hinduism, Buddhism, Jainism, Sikhism, Confucianism, Taoism, Shinto, Zoroastrianism, Judaism, Christianity, and Islam. They will also examine scriptures from new religious movements including Baha'i, The Church of Jesus Christ of Latter-Day Saints, the Christian Science Church, and the Unification Church. Most introductory textbooks talk about world religions; this anthology lets them speak for themselves. This anthology presents scripture readings in context, showing students how each religion is actually practiced today, as well as introducing its history, teachings, organization, ethics, and rituals. These selections are supported by introductions, study questions, glossaries, extensive footnotes, timelines, scriptural charts, and suggestions for further reading by the editor.
