Imagine if a student spent as much time managing information as celebrities doted on dieting? While eating too much food may be the basis of a moral panic about obesity, excessive information is rarely discussed as a crisis of a similar scale. Obviously, plentiful and high quality food is not a problem if eating is balanced with exercise. But without the skills of media and information literacy, students and citizens wade through low quality online information that fills their day yet does not enable intellectual challenge, imagination and questioning. *Digital Dieting: From Information Obesity to Intellectual Fitness* probes the social, political and academic difficulties in managing large quantities of low quality information. But this book does not diagnose a crisis. Instead, *Digital Dieting* provides strategies to develop intellectual fitness that sorts the important from the irrelevant and the remarkable from the banal. In April 2010, and for the first time, Facebook received more independent visitors than Google. Increasingly there is a desire to share rather than search. But what is the impact of such a change on higher education? If students complain that the reading is 'too hard', then one response is to make it easier. If students complain that assignments are too difficult, then one way to manage this challenge is to make the assignments simpler. Both are passive responses that damage the calibre of education and universities in the long term. *Digital Dieting: From Information Obesity to Intellectual Fitness* provides active, conscious, careful and applicable strategies to move students and citizens from searching to researching, sharing to thinking, and shopping to reading.

The new device, HomePod, offers an easy and amazing way for Apple users to enjoy AirPlay, Apple Music, and control their HomeKit devices from anywhere. HomePod was not created to be a competitor to Google Home or Amazon Echo, just as the MacBook Air was not designed to compete against the netbook. Of course, they do share a number of characteristics. For instance, the HomePod smart speaker can be voice-controlled and the MacBook Air is compact and lightweight. However, HomePod is just a \$350 home assistant; much like the MacBook was a \$200 laptop computer. The Fire Phone by Amazon was not much of a hit. Alexa, therefore, had to sell a lot so that Prime could stick into more people's lives. This was a success, thanks to the priced-to-move Echo. Google, on the other hand, made a brilliant decision to follow in the footsteps because it has to satisfy its insatiable data thirst. When it comes to HomePod, something was a little different. The AirPods were designed to help you enjoy your favorite music on the go while HomePod was

designed to help you enjoy your favorite music in a convenient way in your home. AirPods lacked wires and sufficient surface area for traditional buttons. Because of this, the Siri voice control was the only way to interact with the gadget (you have to be near the device). The Ultimate HomePod User Guide
