This book offers practical strategies for all library and information practitioners and policy makers with responsibility for developing and delivering information literacy programmes to their users. This new book picks up where the best-selling Information Literacy meets Library 2.0 left off. In the last three years the information environment has changed dramatically, becoming increasingly dominated by the social and the mobile. This new book asks where we are now, what is the same and what has changed, and, most crucially, how do we as information professionals respond to the new information literacy and become a central part of the revolution itself? The book is divided into three distinct sections. Part 1 explores the most recent trends in technology, consumption and literacy, while Part 2 is a resource bank of international case studies that demonstrate the key trends and their effect on information literacy and offer innovative ideas to put into practice. Part 3 assesses the impact of these changes on librarians and what skills and knowledge they must acquire to evolve alongside their users. Some of the key topics covered are: • the evolution of 'online' into the social web as mainstream • the use of social media tools in information literacy • the impact of mobile devices on information literacy delivery • shifting literacies, such as metaliteracy, transliteracy and media literacy, and their effect on information literacy. Readership: This is essential reading for all library and information practitioners and policy makers with responsibility for developing and delivering information literacy programmes to their users. It will also be of great interest to students of library and information studies particularly for modules relating to literacy, information behaviour and digital technologies.

Tools and technologies have long complemented and extended our physical abilities: from pre-historic spearheads to steam-propelled ploughs and high-tech prosthetics. While the development of lenses granted us insights into the micro and macrocosms, new sensors and technologies increasingly augment our cognitive abilities, including memory and perception. This book integrates current research efforts, results, and visions from the fields of computer science, neuroscience, and psychology. It provides a comprehensive overview of the state-of-the-art and future applications of how technologies assist and augment human perception and cognition. Experts in the field share their research and findings on: Working memory enhancements Digitization of memories through lifelog archives The consequences of technology-induced disruptions and forgetting The creation and utilization of new human senses Ethical and security concerns that arise with augmentation technologies. As technology weaves itself ever deeper into our lives, careful examination of its capabilities, risks and benefits is warranted. While this book focuses on the complementation and augmentation of human capabilities, it serves as a foundation for students, researchers and designers of technologies that push the boundaries of perception and cognition.

The rich programme of ICIDS 2009, comprising invited talks, technical presentations and posters, demonstrations, and co-located post-conference workshops clearly underscores the event's status as premier international meeting in the domain. It thereby confirms the decision taken by the Constituting Committee of the conference series to take the step forward: out of the national cocoons of its precursors, ICVS and TIDSE, and towards an itinerant platform reflecting its global constituency. This move reflects the desire and the will to take on the challenge to stay on the lookout, critically reflect upon and integrate views and ideas, findings and experiences, and to promote interdisciplinary exchange, while ensuring overall coherence and maintaining a sense of direction. This is a significant enterprise: The challenges sought are multifarious and must be addressed consistently at all levels. The desire to involve all research communities and stakeholders must be matched by acknowledging the differences in established practices and by providing suitable means of guidance and introduction, exposition and direct interaction at the event itself and of lasting (and increasingly: living) documentation, of which the present proceedings are but an important part.

Computers play a crucial and rapidly evolving role in education, particularly in the area of language learning. Far from

being a tool mimicking a textbook or teacher, Computer-Assisted Language Learning (CALL) has the power to transform language learning through the pioneering application of innovative research and practices. Technological innovation creates opportunities to revisit old ideas, conduct new research and challenge established beliefs, meaning that the field is constantly undergoing change. This fully revised second edition brings teachers and researchers up-to-date by offering: A comprehensive overview of CALL and current research issues Step-by-step instructions on conducting research projects in CALL Extensive resources in the form of contacts, websites and free software references A glossary of terms related to CALL Closely linked to other branches of study such as autonomy in language learning and computer science, CALL is at the cutting edge of current research directions. This book is essential reading for all teachers and researchers interested in using CALL to make language learning a richer, more productive and more enjoyable task. Ken Beatty has taught at colleges and universities in Canada, Asia and the Middle East. His publications include more than 100 textbooks for learning English as a Second Language, as well as various websites, CD-ROMs and educational videos.

The last two decades have seen concerns for equality, diversity, social justice and human rights move from the margins of museum thinking and practice, to the core. The arguments – both moral and pragmatic – for engaging diverse audiences, creating the conditions for more equitable access to museum resources, and opening up opportunities for participation, now enjoy considerable consensus in many parts of the world. A growing number of institutions are concerned to construct new narratives that represent a plurality of lived experiences, histories and identities which aim to nurture support for more progressive, ethically-informed ways of seeing and to actively inform contemporary public debates on often contested rights-related issues. At the same time it would be misleading to suggest an even and uncontested transition from the museum as an organisation that has been widely understood to marginalise, exclude and oppress to one which is wholly inclusive. Moreover, there are signs that momentum towards making museums more inclusive and equitable is slowing down or, in some contexts, reversing. Museums, Equality and Social Justice aims to reflect on and, crucially, to inform debates in museum research, policy and practice at this critical time. It brings together new research from academics and practitioners and insights from artists, activists, and commentators to explore the ways in which museums, galleries and heritage organisations are engaging with the fast-changing equalities terrain and the shifting politics of identity at global, national and local levels and to investigate their potential to contribute to more equitable, fair and just societies.
