With one volume each year, this series keeps scientists and advanced students informed of the latest developments and results in all areas of the plant sciences. The present volume includes reviews on genetics, cell biology, and vegetation science.

This proceedings volume explores the latest advances in transport and logistics, while also discussing the applications of modern information technologies, telecommunications, electronics, and prospective research methods and analyzing their impacts on society and the environment, which in turn determine the future development of these technologies. The book is intended for a broad readership, including transport and logistics business planners and technical experts, leveraging industry knowledge and facilitating technology adoption in promising business regions and transit corridors such as Ukraine, Kazakhstan, and others. The authors, who include policy planners and crafters as well as education and training professionals, address various types of intermodal transport such as rail, road, maritime, air, etc.

A collection of correspondence between Claude Eatherly, a former air force pilot, and Günther Anders, a German philosopher. Eatherly was the pilot who gave the all-clear for the dropping of the atomic bomb on Hiroshima: an action the implications of which he had not known at the time. Returning from the mission and learning of the devastating impact of the atomic bomb Eatherly was unable to calmly accept his role. Though he was treated as a hero in the press, Eatherly was morally distraught over his actions and felt that he could not silently accept the accolades. Over the course of some 71 letters Anders and Eatherly struggled with the problem of taking moral responsibility in a time when ethics were the last thing that most people seemed to want to discuss. Part of what fascinated Anders about Eatherly – and prompted the former to contact the latter – was precisely this way in which Eatherly sought to take responsibility for something which he easily could have ignored as having been a matter of "just following orders." Burning Conscience is a fascinating and troubling book – not simply because it provides a first-hand account of an oft untold moral story in the aftermath of World War II, but because the matters being discussed by Anders and Eatherly are as important today as they were during the lives of the correspondents.— Lib. Ship.

This is a substantially revised and updated introduction to arithmetic topics, both ancient and modern, that have been at the centre of interest in applications of number theory, particularly in cryptography. As such, no background in algebra or number theory is assumed, and the book begins with a discussion of the basic number theory that is needed. The approach taken is algorithmic, emphasising estimates of the efficiency of the techniques that arise from the theory, and one special feature is the inclusion of recent applications of the theory of elliptic curves. Extensive exercises and careful answers are an integral part all of the chapters.

Homeland Security and Emergency Response is a first edition product for McGraw-Hill Higher Education. The book and its ancillaries are being developed and designed to meet the needs of

a 15 hour course by the same name. It focuses on providing information on recognizing threats, acting on threats, and providing patient care as well as the communication that must occur when a threat to homeland security occurs. Threats covered include Biological, Nuclear, Chemical, Incendiary and Explosive threats. Additional information on Clandestine Drug Laboratories is also covered. The information is easy-to-read and step-by-step procedures for using related equipment and skills are included. The primary market for this product suite and course include those in emergency medical services (paramedics, EMT-Basics, First Responders), police, and those in fire. This is Volume 42 of the Educational Media and Technology Yearbook. For the past 40 years, our Yearbook has contributed to the field of Educational Technology in presenting contemporary topics, ideas, and developments regarding diverse technology tools for educational purposes. Our Yearbook has inspired researchers, practitioners, and teachers to consider how to develop technological designs and develop curricula and instruction integrating technology to enhance student learning, teach diverse populations across levels with effective technology integration, and apply technology in interactive ways to motivate students to engage in course content. In addition, Volume 42 features the Virtual Reality (VR) and Augmented Reality (AR) research and educational use cases, organized and coordinated by Vivienne and David. This section provides evidence that the affordances of AR, VR, and mixed reality, defined as an immersive multi-platform experience reality (XR), have begun to make indelible changes in teaching and learning in the United States. XR's recent developments stimulated the editors to propose a special edition to mark the interoperability of immersive technology to push the boundaries of human curiosity, creativity, and problem solving. After years of incremental development, XR has reached a critical level of investment, infrastructure, and emerging production. The chapters included in this section illustrate how XR can push user inquiry, engagement, learning, and interactivity to new levels within physical and digital contexts.

Confronted with myriads ofTs, N's and M's in the VICC TNM booklet, classifying a malignancy may seem to many cancer clini cians a tedious, dull and pedantic task. But then when he looks into the TNM-Atlas all of a sudden lifeless categories become vi vid images, challenging his know-how and his investigational skills. Prof. Dr. Brigit van der Werf-Messing, Chairman of the International TNM-Committee of the VICC. Preface In 1938 the League of Nations Health Organization published an "Atlas illustrating the division of cancer of the uterine cervix into four stages according to the anatomo-clinical extent of the growth". Since this work appeared, the idea of visual representation of the anatomical extent of malignant tumours at the different stages of their development has been repeatedly discussed. At its meeting in Copenhagen in July 1954, the VICC adopted as part of its programme "the realization of a clinical atlas". However, the time to do the planned illustration work was not ripe until the National Committees and international organiza tions had officially recognized the 28 classifications of malignant tumours at various sites as presented in the 3rd edition of the "TNM Booklet" (1978) edited by M. Harmer. This was all the more important since in 1980, in addition to the "Booklet", a "Brochure of Checklists" edited by A.H. Sellers was made available as a further aid in the practical application of the TNMsystem.

This book constitutes the refereed proceedings of the First European Conference, Workshops on Model Driven Architecture - Foundations and Applications, ECMDA-FA 2005, held in Nuremberg, Germany in November 2005. The 24 revised full papers presented, 9 papers from the applications track and 15 from the foundations track, were carefully reviewed and selected from 82 submissions. The latest and most relevant information on model driven software engineering in the industrial and academic spheres is provided. The papers are organized in topical sections on MDA development processes, MDA for embedded and real-time systems, MDA and component-based software engineering, metamodelling, model transformation, and model synchronization and consistency.

As the required textbook for NAEMTUs worldwide prehospital trauma life support courses, this is the definitive resource for learning basic and advanced prehospital trauma skills and concepts. Now revised and expanded to cover all aspects of military prehospital trauma with 12 new chapters, this edition is tailored expressly for the military.

The acceptance and preference of the sensory properties of foods are among the most important criteria determining food choice. Sensory perception and our response to food products, and finally food choice itself, are affected by a myriad of intrinsic and extrinsic factors. The pressing question is, how do these factors specifically affect our acceptance and preference for foods, both in and of themselves, and in combination in various contexts, both fundamental and applied? In addition, which factors overall play the largest role in how we perceive and behave towards food in daily life? Finally, how can these factors be utilized to affect our preferences and final acceptance of real food and food products from industrial production and beyond for healthier eating? A closer look at trends in research showcasing the influence that these factors and our senses have on our perception and affective response to food products and our food choices is timely. Thus, in this Special Issue collection "Consumer Preferences and Acceptance of Food Products", we bring together articles which encompass the wide scope of multidisciplinary research in the space related to the determination of key factors involved linked to fundamental interactions, cross-modal effects in different contexts and eating scenarios, as well as studies that utilize unique study design approaches and methodologies.

This text addresses many of the questions which occur when medical professionals of various disciplines interact and have different plans and interventions, each with its own valid scientific and/or experience-based rationale: Questions involving tourniquet placement, ideal fluids and volumes for resuscitation, VTE prophylaxis and many other management considerations. Straightforward decisions in the patient with a single diagnosis often conflict when applied to the neurologically injured polytrauma patients. Neurotrauma Management for the Severely Injured Polytrauma Patient answers as many of these questions as possible based on the current literature, vast experaience with severe neurotrauma in the current conflicts in Afghanistan and Iraq, and the experience of trauma experts across the globe as well as proposes areas for future study where answers are currently less clear.

Text only. This product does NOT include a Resource Central Access Code Card. To purchase the text with a Resource Central Access Code Card, please use ISBN: 0-13-281811-6 For more than 30 years, International Trauma Life Support has been at the forefront of trauma education at all levels of emergency care worldwide. This practical, hands-on training offers a complete reference covering all skills necessary for rapid assessment, resuscitation, stabilization, and transportation of the trauma patient. Updated with new photos and the latest approaches to the care of the trauma patient, this seventh edition conforms to the most recent AHA/ILCOR guidelines for artificial ventilation and CPR.

Computer science is the science of the future, and already underlies every facet of business and technology, and much of our everyday lives. In addition, it will play a crucial role in the science the 21st century, which will be dominated by biology and biochemistry, similar to the role of mathematics in the physical sciences of the 20th century. In this award-winning best-seller, the author and his co-author focus on the fundamentals of computer science, which revolve around the notion of the algorithm. They discuss the design of algorithms, and their efficiency and correctness, the inherent limitations of algorithms and computation, quantum algorithms, concurrency, large systems and artificial intelligence. Throughout, the authors, in their own words, stress the 'fundamental and robust nature of the science in a form that is virtually independent of the details of specific computers, languages and formalisms'. This version of the book is published to celebrate 25 years since its first edition, and in honor of the Alan M. Turing Centennial year. Turing was a true pioneer of computer science, whose work forms the underlying basis of much of this book.

Small Business Management provides a balanced introduction to both entrepreneurship and small business management with a focus on achieving and maintaining a sustainable competitive advantage as a small organization. Current issues including global opportunities, service, quality and technology are highlighted throughout the text. The streamlined format allows instructors to cover the entire text of 18 chapters within a standard semester timeline without sacrificing important topics. The Fourth Edition features an increased emphasis on small business ownership by women and minority groups. The online Business Plan Guide and templates provide some of the most extensive information available on business planning. The text also includes a complete sample business plan.

The continued growth of e-commerce mandates the emergence of new technical standards and methods that will securely integrate online activities with pre-existing infrastructures, laws and processes. Protocols for Secure Electronic Commerce, Second Edition addresses the security portion of this challenge. It is a full compendium of the protocols for securing online commerce and payments, serving as an invaluable resource for students and professionals in the fields of computer science and engineering, IT security, and financial and banking technology. The initial sections provide a broad overview of electronic commerce, money, payment systems, and business-to-business commerce, followed by an examination of well-known protocols (SSL, TLS, WTLS, and SET). The book also explores encryption algorithms and methods, EDI, micropayment, and multiple aspects of digital money. Like its predecessor, this edition is a general analysis that provides many references to more technical resources. It delivers extensive revisions of previous chapters, along with new chapters on electronic commerce in society, new e-commerce systems, and the security of integrated circuit cards.

This book reports on research and practice on computational thinking and the effect it is having on education worldwide, both inside and outside of formal schooling. With coding becoming a required skill in an increasing number of national curricula (e.g., the United Kingdom, Israel, Estonia, Finland), the ability to think computationally is quickly becoming a primary 21st century "basic" domain of knowledge. The authors of this book investigate how this skill can be taught and its resultant effects on learning throughout a student's education, from elementary school to adult learning.

This second edition laboratory manual was written to accompany Food Analysis, Fourth Edition, ISBN 978-1-4419-1477-4, by the same author. The 21 laboratory exercises in the manual cover 20 of the 32 chapters in the textbook. Many of the laboratory exercises have multiple sections to cover several methods of analysis for a particular food component of characteristic. Most of the laboratory exercises include the following: introduction, reading assignment, objective, principle of method, chemicals, reagents, precautions and waste disposal, supplies, equipment, procedure, data and calculations, questions, and references. This laboratory manual is ideal for the laboratory portion of undergraduate courses in food analysis.

Purchasing and Supply Chain Management, 3rd Edition is a turnkey solution for providing current and thorough coverage for this critical area of the supply chain. This book is not only a text but a reference as well and is now established as one of the leading-edge strategy and purchasing books. Students gain contextual insights and knowledge into the strategies, processes, and practices of purchasing through use of the many cases and examples. Because of their relationships with executives and practitioners worldwide, the authors are able to present unique and up-to-date insights that lead to greater understanding of the purchasing process. Purchasing and Supply Chain Management provides a hands-on, applied approach that has been thoroughly tested with student audiences to ensure learning success.

Handbook of Neurofeedback is a comprehensive introduction to this rapidly growing field, offering practical information on the history of neurofeedback, theoretical concerns, and applications for a variety of disorders encountered by clinicians. Disorders covered include ADHD, depression, autism, aging, and traumatic brain injury. Using case studies and a minimum of technical language, the field's pioneers and most experienced practitioners discuss emerging topics, general and specific treatment procedures, training approaches, and theories on the efficacy of neurofeedback. The book includes comments on the future of the field from an inventor of neurofeedback equipment and a discussion on the theory of why neurofeedback training results in the alleviation of symptoms in a wide range of disorders. The contributors review of procedures and a look at emerging approaches, including coherence/phase training, inter-hemispheric training, and the combination of neurofeedback and computerized cognitive training. Topics discussed include: Implications of network models for neurofeedback The transition from structural to functional models Client and therapist variables Treatment-specific variables Tomographic neurofeedback Applying audio-visual entrainment to neurofeedback Common patterns of coherence deviation EEG patterns and the elderly Nutrition and cognitive health ADHD definitions and treatment Attention disorders Autism disorders The neurobiology of depression QEEG-guided neurofeedback This book is an essential professional resource for anyone practicing, or interested in practicing neurofeedback, including neurotherapists, neuropsychologists, professional counselors, neurologists, neuroscientists, clinical p

Use this in-depth guide to correctly design benchmarks, measure key performance metrics of .NET applications, and analyze results. This book presents dozens of case studies to help you understand complicated benchmarking topics. You will avoid common pitfalls, control the accuracy of your measurements, and improve performance of your software. Author Andrey Akinshin has maintained BenchmarkDotNet (the most popular .NET library for benchmarking) for five years and covers common mistakes that developers usually make in their benchmarks. This book includes not only .NET-specific content but also essential knowledge about performance measurements which can be applied to any language or platform (common benchmarking methodology, statistics, and low-level features of modern hardware). What You'll Learn Be aware of the best practices for writing benchmarks and performance tests Avoid the common benchmarking pitfalls Know the hardware and software factors that affect application performance Analyze performance measurements Who This Book Is For .NET developers concerned with the performance of their applications

This second edition of Dr Bram Oppenheim's established work, like the first, is a practical teaching text of survey methods. The new edition has extended its scope to include interviewing (both clip-board and depth interviewing), sampling and research design, data analysis, and a special chapter on pilot work. As before, the chapters on questionnaire design are supported by further chapters on attitude scaling methods, and on projective techniques. There is refreshingly critical treatment of problems such as faulty research designs, errors in sampling, ambiguities in question wording, biases in interviewing, losses of information, and the interpretation of attitude scales and of projective data. The book is laced throughout with instructive examples from many fields, ranging from marketing surveys to the study of children's political perceptions. Problems of reliability and validity are kept to the fore. Above all, the need for pilot work is emphasized at every stage. The book is intended for graduate methodology courses in the social sciences, but it is also designed to reach other professionals, including teachers, social workers, medical researchers, and opinion pollsters, who have to evaluate or carry out social surveys.

MARKETING STRATEGY, 6e, International Edition edition emphasizes teaching students to think and act like marketers. It presents strategy from a perspective that guides strategic marketing management in the social, economic, and technological arenas in which businesses function today--helping students develop a customer-oriented market strategy and market plan. Its practical approach to analyzing, planning, and implementing marketing strategies is based on the creative process involved in applying marketing concepts to the development and implementation of marketing strategy. An emphasis on critical thinking enables students to understand the essence of how marketing decisions fit together to create a coherent strategy. Well-grounded in developing and executing a marketing plan, the text offers a complete planning framework, thorough marketing plan worksheets, and a comprehensive marketing plan example for students to follow.

In what is widely considered the most influential book ever written by Walter Lippmann, the late journalist and social critic provides a fundamental treatise on the nature of human information and communication. The work is divided into eight parts, covering such varied issues as stereotypes, image making, and organized intelligence. The study begins with an analysis of "the world outside and the pictures in our heads", a leitmotif that starts with issues of censorship and privacy, speed, words, and clarity, and ends with a careful survey of the modern newspaper. Lippmann's conclusions are as meaningful in a world of television and computers as in the earlier period when newspapers were dominant. Public Opinion is of enduring significance for communications scholars, historians, sociologists, and political scientists. Copyright © Libri GmbH. All rights reserved.

From the perspective of the investigator, Graves' disease is a fascinating disorder with unique features and opportunities for study. The discovery in 1956 that Graves' disease was caused by a humoral factor, later shown to be an antibody to the TSH receptor, was a triumph for modern investigative medicine. Rapid progress is now being made in (i) understanding the molecular interaction between autoantibodies and the TSH receptor, (ii) identifying the genes that contribute to the predisposition to disease, (iii) developing an animal model of Graves' disease, and (iv) identifying the long-sought orbital antigen in ophthalmopathy. From the clinical standpoint, although Graves' disease is eminently treatable, there is no definitive cure. None of the therapeutic options are ideal. It is hoped that rapid progress in understanding the pathogenesis of the disease will lead to the ultimate goal of some form of immunotherapy that will make antithyroid drugs, radioiodine and thyroidectomy obsolete. The chapters in Graves' Disease: Pathogenesis and Treatment represent the viewpoints of many prominent clinicians and investigators working in the field. The editors are grateful for their contributions which cover an unusually comprehensive compendium of subjects relating to the disease.

The full spectrum of emergency medicine captured in one full-color pocket manual Written by clinicians engaged in the day-to-day practice of emergency medicine, this handy manual is derived from Tintinalli's Emergency Medicine, Eighth Edition, the field's most trusted text. Packing a remarkable amount of information in such a compact presentation, this trusted point-of-care partner is composed of brief chapters focusing on clinical features, diagnosis and differential, and emergency management and disposition. With its unmatched authority and easy-to-use organization, Tintinalli's Emergency Medicine Manual, is the surest, most convenient way to assure skillful and timely patient care in the acute care setting. • Rich full-color design with an increased number of photos and line drawings • Numerous tables, making information easy to access • Completely revised content to match current practice • Covers both adult and pediatric populations
