This volume explores the dynamics of myths throughout time and space, along with the mythmaking processes in various cultures, literatures and languages, in a wide range of fields, ranging from cultural studies to the history of art. The papers brought together here are motivated by two basic questions: How are myths made in diverse cultures and literatures? And, do all different cultures have different myths to be told in their artistic pursuits? To examine these questions, the book offers a wide array of articles by contributors from various cultures which focus on theory, history, space/ place, philosophy, literature, language, gender, and storytelling. Mythmaking across Boundaries not only brings together classical myths, but also contemporary constructions and reconstructions through different cultural perspectives by transcending boundaries. Using a wide spectrum of perspectives, this volume, instead of emphasising the different modes of the mythmaking process, connects numerous perceptions of mythmaking and investigates diversities among cultures, languages and literatures, viewing them as a unified whole. As the essays reflect on both academic and popular texts, the book will be useful to scholars and students, as well as the general reader.

Star Wars has reached more than three generations of casual and hardcore fans alike, and as a result many of the producers of franchised Star Wars texts (films, television, comics, novels, games, and more) over the past four decades have been fans-turned-creators. Yet despite its dominant cultural and industrial positions, Star Wars has rarely been the topic of sustained critical work. *Star Wars and the History of Transmedia Storytelling* offers a corrective to this oversight by curating essays from a wide range of interdisciplinary scholars in order to bring Star Wars and its transmedia narratives more fully into the fold of media and cultural studies. The collection places Star Wars at the center of those studies' projects by examining video games, novels and novelizations, comics, advertising practices, television shows, franchising models, aesthetic and economic decisions, fandom and cultural responses, and other aspects of Star Wars and its world-building in their multiple contexts of production, distribution, and reception. In emphasizing that Star Wars is both a media franchise and a transmedia storyworld, *Star Wars and the History of Transmedia Storytelling* demonstrates the ways in which transmedia storytelling and the industrial logic of media franchising have developed in concert over the past four decades, as multinational corporations have become the central means for subsidizing, profiting from, and selling modes of immersive storyworlds to global audiences. By taking this dual approach, the book focuses on the interconnected nature of corporate production, fan consumption, and transmedia world-building. As such, this collection grapples with the historical, cultural, aesthetic, and political-economic implications of the relationship between media franchising and transmedia storytelling as they are seen at work in the world's most profitable transmedia franchise.

At the intersection of astronautics, computer science, and social science, this book introduces the challenges and insights associated with computer simulation of human society in outer space, and of the dynamics of terrestrial enthusiasm for space exploration. Never before have so many dynamic representations of space-related social systems existed, some deeply analyzing the logical implications of social-scientific theories, and others open for experience by the general public as computer-generated virtual worlds. Fascinating software ranges from multi-agent artificial intelligence models of civilization, to space-oriented massively multiplayer online games, to educational programs suitable for schools or even for the world's space exploration agencies. At the present time, when actual forays by humans into space are scarce, computer simulations of space societies are an excellent way to prepare for a renaissance of exploration beyond the bounds of Earth.
