This tale of an ambitious inventor in France as the Revolution looms is "brilliantly playful . . . full of lore and lewdness" (Chicago Tribune). "A portrait of a young mechanical genius in 18th-century France, delivered along with a gallimaufry of odd and intriguing facts and a rich, lusty picture of society in that time and place."

—Publishers Weekly In France, on the eve of the Revolution, a young man named Claude Page sets out to become the most ingenious and daring inventor of his time. Over the course of a career filled with violence and passion, Claude learns the arts of enameling and watchmaking from an irascible, defrocked abbé, then apprentices himself to a pornographic bookseller and applies his erotic erudition to the seduction of the wife of an impotent wigmaker. But it is Claude's greatest device—a talking mechanical head—that both crowns his career and leads to an execution as tragic as that of Marie Antoinette, and far more bizarre. "Like a joint effort by Henry Fielding and John Barth" (Chicago Tribune), this "captivating novel" (San Francisco Chronicle) marked the debut of one of the finest literary artists of our time. "A Case of Curiosities . . . really is brilliant. Also witty, learned, ingenious, sly, and bawdy." —Entertainment Weekly "What John Fowles did for the 19th century with *The French Lieutenant's Woman* and Umberto Eco did for the 14th with *The Name of the Rose* . . . Kurzweil now does for the late 18th century." —San Francisco Chronicle

Introduction to Antenna Placement and Installation introduces the characteristics of antennas and their integration on aircraft. The book covers antenna siting and placement, computational antenna modelling on structures, measurement on sub-scale models of the airframe, full-scale ground measurements and in-flight measurements. The author addresses the different stages in the process of developing an entire antenna layout, as well as covering individual retrofits on existing platforms. She explains the physics of antenna placement qualitatively, thus obviating the requirement to understand complex mathematical equations. Provides a reference book & guide written primarily for Antenna and Integration Engineers but which will also be of interest to Systems Engineers and Project Managers Includes chapters on aircraft systems using antennas, restrictions & trade-offs, frequency & spatial coverage considerations, effect of other antennas & obstacles, RF interoperability issues associated with radiated emissions,

computer modelling software, scaled model & full-scale measurements, comparison between measurements & modelling, as well as ground tests and in-flight measurements Describes techniques that can be applied equally to antennas on other structures such as land or sea vehicles and spacecraft Illustrated throughout with figures & diagrams as well as a full colour plates When Stink's parents win an aquarium sleepover, he and his two friends enjoy a scavenger hunt before trying to fall asleep while worrying about the frankensquid on the loose.

Standardization of hardware description languages and the availability of synthesis tools has brought about a remarkable increase in the productivity of hardware designers. Yet design verification methods and tools lag behind and have difficulty in dealing with the increasing design complexity. This may get worse because more complex systems are now constructed by (re)using Intellectual Property blocks developed by third parties. To verify such designs, abstract models of the blocks and the system must be developed, with separate concerns, such as interface communication, functionality, and timing, that can be verified in an almost independent fashion. Standard Hardware Description Languages such as VHDL and Verilog are inspired by procedural 'imperative' programming languages in which function and timing are inherently intertwined in the statements of the language. Furthermore, they are not conceived to state the intent of the design in a simple declarative way that contains provisions for design choices, for stating assumptions on the environment, and for indicating uncertainty in system timing. Hierarchical Annotated Action Diagrams: An Interface-Oriented Specification and Verification Method presents a description methodology that was inspired by Timing Diagrams and Process Algebras, the so-called Hierarchical Annotated Diagrams. It is suitable for specifying systems with complex interface behaviors that govern the global system behavior. A HADD specification can be converted into a behavioral real-time model in VHDL and used to verify the surrounding logic, such as interface transducers. Also, function can be conservatively abstracted away and the interactions between interconnected devices can be verified using Constraint Logic Programming based on Relational Interval Arithmetic. Hierarchical Annotated Action Diagrams: An Interface-Oriented Specification and Verification Method is of interest to readers who are involved in defining methods and tools for system-level design specification and verification. The techniques for interface compatibility verification can be used by practicing designers, without any more sophisticated tool than a calculator.

The Fair Housing Act Design Manual: A Manual to Assist Designers and Builders in Meeting the Accessibility Requirements of The Fair Housing Act provides clear and helpful guidance about ways to design and construct housing which complies with the Fair Housing Act. The manual provides direct information about the accessibility requirements of the Act, which must be incorporated into the design, and construction of multifamily housing covered by the Act. It carries out two statutory responsibilities: (1) to provide clear statement of HUD's interpretation of the accessibility requirements of the Act so that readers may know what actions on their part will provide them with a "safe harbor"; and (2) to provide guidance in the form of recommendations which, although not binding meet the Department's obligation to provide technical assistance on alternative accessibility approaches which will comply with the Act, but may exceed its minimal requirements. The latter information allows housing providers to choose among alternative and also provides persons with disabilities with information on accessible design approaches. The Manual clarifies what are requirements under the Act and what are HUD's technical assistance recommendations. The portions describing the requirements are clearly differentiated from the technical assistance recommendations.

Covering all of the main topics, including panel data, that are expected in the first econometrics course, *Understanding Econometrics* uses a new, understandable approach that explains theory intuitively in English, not through a series of mathematical derivations. Recognizing that most students will not be doing economics graduate work, but that they may well need to understand econometrics and how to apply it, this new text focuses on the connection between theory and practice. The text uses a simplified notation system and examples that are integrated with the explanations of the material, fostering comprehension so that the instructor can focus more readily on theory and applications.

With its magnificent forests, bluffs, and shoreline and its breathtaking views of Green Bay and Lake Michigan, Door County's Peninsula State Park is one of the Midwest's most popular attractions. Established in 1909, it was Wisconsin's second state park and a key to pioneering efforts to build a state park system that would be the envy of the nation. Door County's Emerald Treasure explores the rich history of the park land, from its importance to Native Americans and early European settlers through the twentieth century. Bill Tishler engagingly relates the role of conservationists and progressives in establishing the state park, its growing popularity for tourism and recreation, and efforts to protect the park's resources from a variety of threats. Tishler also tells a larger story of Americans'

intimate relationship with the land around them and the challenge to create accessible public spaces that preserve the natural environment.
