The first edition of Outboard Engines set the standard for a clear, easy-to-follow primer on engine basics, troubleshooting, care, and repair. This new edition, significantly expanded, brings the subject up to date, with full coverage of the new four-stroke engines, conventional electronic and direct fuel-injection systems, oil-mix systems in the new clean two-strokes, and more. You'll save time and money doing your own engine repairs and maintenance.

Famed yacht designer and author L. Francis Herreshoff takes us on family style cruises in American waters, during which all sorts of boats and boating skills are explained while they are used. He tells about the adventures of the crews of the catboat Piscator, the ketch Viator, and the engineless whaleboat-style ketch Rozinante. There are anecdotes and examples and a wide variety of boat lore in each chapter, as well as adventures, races and coastwide cruises and historical harbors to visit.

This densely illustrated, hands-on guide to diesel engine maintenance, troubleshooting, and repair renders its subject more user-friendly than ever before. Finally, boatowners who grew up with gas engines can set aside their fears about tinkering with diesels, which are safer and increasingly more prevalent. As in other volumes in the International Marine Sailboat Library, every step of every procedure is illustrated, so that users can work from the illustrations alone. The troubleshooting charts in the second chapter--probably the most comprehensive ever published--are followed by system-specific chapters,

allowing readers to quickly diagnose problems, then turn to the chapter with solutions. Diesel engine systems covered include: mechanical; oil; fresh- and raw-water cooling; low- and high-pressure fuel; exhaust; starting; charging; transmission and stern gear.

The early development of the screw propeller. Propeller geometry. The propeller environment. The ship wake field, propeller performance characteristics.

Africa: An Introduction invites you into Africa: a continent rich with culture and history, with diverse populations stretching from the dense tropical rain forest of the Congo basin, right up to the Sahara Desert in the north, and down to the Mediterranean climates of the far south. Containing fifty-five countries, and covering over 20 percent of the world's landmass, Africa is the birthplace of humanity, yet the image of Africa in the West is often negative, that of a continent riddled with endemic problems. This accessible and engaging guide to the African continent guides the reader through the history, geography, and politics of Africa. It ranges from the impact of slavery and imperialism through to the rise of African nationalism and the achievement of independence, and up to the present moment. Key topics covered include literature, art, technology, religion, the condition of African women, health, education, and the mounting environmental concerns faced by African people. As Africa moves beyond the painful legacies of slavery and imperialism, this book provides an engaging, uplifting, and accessible introduction to a rapidly modernizing and diverse continent. Suitable for high school and undergraduate students studying Africa, this book will also serve as the perfect introduction for anyone looking to understand the history of Africa and the Africa of today.

Pobalscoil Chloich Cheannfhaola (P.C.C.) is a community school located in the Gaeltacht area of Falcarragh in the beautiful North West of Co. Donegal. Every year, 2nd-year students who participate in the Junior Certificate Schools Programme (JCSP), have the opportunity to get involved in the JCSP Make a Book exhibition. Students create a book based on a subject that is of interest to them and then display it alongside books created by students from schools all over the North West of Ireland. This wonderful showcase represents many hours of work by the students and their teachers and is a chance for students to exhibit their many skills and talents. Over the last few years, our school has been very fortunate to be able to collaborate with Pobal le Chéile, a local community development group in Falcarragh. This collaboration has been a very positive experience for the students and staff at P.C.C. and has served to help build links in the community. It has also given our JCSP students the opportunity to work with some of their greatly talented staff and learn so much through workshops, visits and talks. This year, Rang Eoin chose to create a digital book based around a tree planting project they undertook. The idea for this project came about through a donation of trees to the school and community from "Trees on the Land" which is a charity and not-for-profit project from the Green Economy Foundation in collaboration with The Woodland Trust in Northern Ireland. As a JCSP librarian, it is always a proud moment when students see their finished book for the first time and can celebrate the fact that they are authors, no mean feat at the age just of 14 or 15 years old. \* Outboard motor repair for the average guy \* Fix up an old outboard and SAVE \$1000 or more compared to buying a new motor! With a little know-how and a few common tools, you can fix an old motor—bring it back from the dead. Sometimes all it takes is a squirt of WD-40 into the cylinder and a new spark plug. Or a new set of points and condensers—which do not require expert knowledge or black magic to install. Maybe the carburetor needs cleaning and adjusting. You can do it! Max E. Wawrzyniak III is an outboard motor guru. He advises you to find an old motor at a yard sale for \$100 or so (and he tells you exactly which ones to look for), and fix it up—rather than spending \$1500 or more on a new motor. He is a big fan of “cheap power.” Get on the water with money left in your pocket. With a basic understanding of how these motors work, a little logical thinking, and a few hours’ work, you can go boating for a fraction of what everyone else has to pay. Also—for the boater who already owns an outboard motor of any age—this book demystifies these internal-combustion marvels that can bring such frustration if they malfunction. You’ll learn how they work, and the simple things you can do to keep them running forever. What Max teaches are not only money-saving skills, but can also be life-saving, as you will no longer be helpless in the face of engine trouble on the water.
