Through ten examples of ingenious experiments by some of psychology's most innovative thinkers, Lauren Slater traces the evolution of the century's most pressing concerns—free will, authoritarianism, conformity, and morality. Beginning with B. F. Skinner and the legend of a child raised in a box, Slater takes us from a deep empathy with Stanley Milgram's obedience subjects to a funny and disturbing re-creation of an experiment questioning the validity of psychiatric diagnosis. Previously described only in academic journals and textbooks, these often daring experiments have never before been narrated as stories, chock-full of plot, wit, personality, and theme.

Most people have to communicate with colleagues every day and persuade them to understand their opinions or to accept their views. This handbook is intended for anyone who is interested in such goal-oriented language. It extracts 300 persuasive tactics from research findings in communication, linguistics, pragmatics and related fields, and presents them in a clear, concise and consistent manner. Such tactics as analogy, argument presentation, humour and metaphor are included. Each tactic is presented on a separate page with an analysis of its persuasive value. Two indexes - one by persuasive need and the other by tactic - allow readers full flexibility to use the handbook in their own way. This work should be of interest in courses which deal with the management of interaction, pragmatics, discourse analysis and communications.
