There is a fierce wind blowing in from the sea, as I step off the boat towards my new life in America. The baby is a warm weight in my arms and I pause to adjust her, trying not to think about what we left behind. I can't look back now, I need to keep this child safe... Ireland 1939. When hardworking chambermaid Rose meets an American businessman in the hotel where she works in Cork, he makes her an offer she can't refuse. Rose doesn't want to leave home, but her widowed mammy and three younger sisters need the money she'd earn in her new job as a nanny to David Townsend's two young children. Just as Rose is settling into her new life caring for Raphael and new-born baby Sarah, the world is plunged into war and David is called back to New York, leaving Rose to follow by boat with his wife and children. But disaster strikes when the ship they are on is hit by a torpedo. Separated from her group in the awful chaos, Rose has an impossible decision to make. Does she stay and search for the family she owes so much to? Or does she leave on the lifeboat to save the tiny baby left in her care? Landing on American shores, all Rose's hopes of leaving the howling air-raid sirens and deafening bombs behind her are shattered as tragic news arrives from Pearl Harbor. Looking down at the innocent child in her arms, Rose knows that she must find the strength to survive and reunite this little girl with her family.

A witty and romantic novel of Regency love, family and appalling scandal, from a latter-day Jane Austen When their strait-laced, domineering father, Sir Clement Carnell, dies, Valentine throws open their Devonshire estate of Pennacombe to their fashionable cousins from London and Louisa feels free at last to reject the man Sir Clement wanted her to marry. Soon, the temptations of Regency London beckon, including the beautiful, scandalous, and very married Lady Harriet Eversholt, with whom Valentine becomes dangerously involved. Meanwhile, Louisa finds that freedom of choice is as daunting as it is exciting. Will the opportunity to indulge in a little folly lead to fulfillment—or disaster? *A Little Folly* is a novel to make Jane Austen proud and Georgette Heyer envious. An acclaimed author of historical fiction, Jude Morgan weaves together the very best of Regency era writing with "refreshingly original characters, an intriguing plot, and an elegantly ironic style." (RT Book Reviews on *Indiscretion*). In this exciting new novel, Morgan delivers a story that, yet again, will bring cheers from critics and readers alike.

Water Management Challenges in Global Change

contains the proceedings of the 9th Computing and

Control for the Water Industry (CCWI2007) and the

Sustainable Urban Water Management

(SUWM2007) conferences. The rationale behind

these conferences is to improve the management of

urban water systems through the development of

computerbased methods. Issues such as economic

globalisation, climate changes and water shortages

call for a new approach to water systems

management, which addresses the relevant

technical, social and economic aspects. This

collection represents the views of academic and

industrial experts from a number of countries, who

provide technical solutions to current water

management problems and present a vision for

addressing the global questions. The themes

underlying many of the contributions include energy

and material savings, water savings and the

integration of different aspects of water

management. The papers are grouped into three

themes covering water distribution systems,

sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. *Water Management Challenges in Global Change* will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

Guidelines for Mine Waste Dump and Stockpile Design is a comprehensive, practical guide to the investigation, design, operation and monitoring of mine waste dumps, dragline spoils and major stockpiles associated with large open pit mines. These facilities are some of the largest man-made structures on Earth, and while most have performed very well, there are cases where instabilities have occurred with severe consequences, including loss of life and extensive environmental and economic damage. Developed and written by industry experts with extensive knowledge and experience, this book is an initiative of the Large Open Pit (LOP) Project. It comprises 16 chapters that follow the life cycle of a mine waste dump, dragline spoil or stockpile from site selection to closure and reclamation. It describes the investigation and design process, introduces a comprehensive stability rating and hazard classification system, provides guidance on acceptability criteria, and sets out the key elements of stability and runout analysis. Chapters on site and material characterisation, surface water and groundwater characterisation and management, risk assessment, operations and monitoring, management of ARD, emerging technologies and closure are included. A chapter is also dedicated to the analysis and design of dragline spoils. Guidelines for Mine Waste Dump and Stockpile Design summarises the current state of practice and provides insight and guidance to mine operators, geotechnical engineers, mining engineers, hydrogeologists, geologists and other
