World Bank Discussion Paper 244. Although many studies have analyzed the gender gap in primary and secondary education in developing countries, this study is one of the few that analyzes the gap at the tertiary, or university level. The authors track the patterns in women's access to and achievement in higher education, including student enrollment and access to faculty and administrative positions. The study also identifies successful strategies and measures for reducing the gender gap. Two issues are examined in this paper. Part I reviews how women have fared in the wake of expanded tertiary enrollments over the past three decades. Despite evidence proving the importance of women's access to higher education for economic growth, a pervasive gap remains, especially in Sub-Saharan Africa, the Middle East, and South Asia. The second part examines the World Bank's experience in projects designed to improve women's experience in higher education. The extent and severity of constraints varied across regions. Results are limited and many projects are still in progress. The findings suggest that countries with low per capita income levels and difficult social settings for women may have the greatest barriers to female participation. Even where social constraints are less severe, the programs for improving female education must respond to the demands of the labor market.

As the number and distinctiveness of design directions in contemporary architecture expands an outcome has emerged of a contradictory nature. While many of these directions hold great intrigue, a troubling aspect arises in that in their realization an "incompleteness" is often exhibited, one expressing a less developed architectural richness expressed an under-utilized nature of the architectural language itself. Internal addresses this issue with a focus on topics underlying the creation of architectural languages. Concentrating on strategies and concepts that inform the creation of cohering architectural languages versus "external" issues affecting design, such as those necessary to accommodate site or program, Internal focuses on design considerations with the authority grounded in "internal" language-based architectural issues. Identifying underlying themes and strategies necessary to create coherent and informed architectural languages constitutes the effort underlying this book.

The second edition of *High Voltage Test Techniques* has been completely revised. The present revision takes into account the latest international developments in High Voltage and Measurement technology, making it an essential reference for engineers in the testing field. High Voltage Technology belongs to the traditional area of Electrical Engineering. However, this is not to say that the area has stood still. New insulating materials, computing methods and voltage levels repeatedly pose new problems or open up methods of solution; electromagnetic compatibility (EMC) or components and systems also demand increased attention. The authors hope that their experience will be of use to students of Electrical Engineering confronted with High Voltage problems in

their studies, in research and development and also in the testing field. Benefit from a completely revised edition Brings you up-to-date with th latest international developments in High Voltage and Measurement technology An essential reference for engineers in the testing field

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

One of the biggest challenges for students of housing is understanding the financial principles which underpin the place of housing in the wider economy. By taking a political economy approach, Peter King's *Understanding Housing Finance* makes the basic principles of the subject accessible, without requiring detailed prior knowledge of economics or financial systems. The book explains housing finance by exploring the way in which markets and governments react together. It takes a conceptual approach to consider the advantages and limits of housing markets and why governments intervene. The consequences of intervention are explored in detail using examples of housing subsidy systems and policy mechanisms such as rent control, housing allowances and subsidies to owner occupation. This is a key reference for students on housing and planning courses at both undergraduate and postgraduate level. The book's approach means that its relevance is not confined to one particular housing system, but is useful for those studying housing finance in most developed and developing countries. Provides updated, comprehensive, and practical information and guidelines on aspects of building design and construction, including materials, methods, structural types, components, and costs, and management techniques.
