Australia has a rich diversity of phasmids--otherwise known as stick and leaf insects. Most of them are endemic, few have been studied and new species continue to be found. Stick insects are, by far, Australia's longest insects--some of them reach up to 300 mm in body length and more than 500 mm including outstretched legs. Many stick insects are very colorful and some have quite elaborate, defensive behavior. Increasingly they are being kept as pets. This is the first book on Australian phasmids for nearly 200 years. It includes photographs and distribution maps for all species, notes on their ecology and biology as well as identification keys suitable for novices or professionals.

Pathwise estimation and inference for diffusion market models discusses contemporary techniques for inferring, from options and bond prices, the market participants' aggregate view on important financial parameters such as implied volatility, discount rate, future interest rate, and their uncertainty thereof. The focus is on the pathwise inference methods that are applicable to a sole path of the observed prices and do not require the observation of an ensemble of such paths. This book is pitched at the level of senior undergraduate students undertaking research at honors year, and postgraduate candidates undertaking Master's or PhD degree by research. From a research perspective, this book reaches out to academic researchers from backgrounds as diverse as mathematics and probability, econometrics and statistics, and computational mathematics and optimization whose interest lie in analysis and modelling of financial market data from a multi-disciplinary approach. Additionally, this book is also aimed at financial market practitioners participating in capital market facing businesses who seek to keep abreast with and draw inspiration from novel approaches in market data analysis. The first two chapters of the book contains introductory material on stochastic analysis and the classical diffusion stock market

models. The remaining chapters discuss more special stock and bond market models and special methods of pathwise inference for market parameter for different models. The final chapter describes applications of numerical methods of inference of bond market parameters to forecasting of short rate. Nikolai Dokuchaev is an associate professor in Mathematics and Statistics at Curtin University. His research interests include mathematical and statistical finance, stochastic analysis, PDEs, control, and signal processing. Lin Yee Hin is a practitioner in the capital market facing industry. His research interests include econometrics, non-parametric regression, and scientific computing.

Twenty years ago, achieving predictable CMYK color on press was a relatively straightforward process. All the partners in the process—photographers, designers, and printers—had clearly defined roles and responsibilities. With the introduction of Adobe Photoshop in 1990, the digital imaging revolution changed all that. Roles suddenly shifted and blurred. Standards disintegrated. The entire process quickly spiraled into a chaotic free-for-all that couldn't help but leave everyone frustrated as they scratched their heads and wondered, "What's wrong with my color?" CMYK 2.0: A Cooperative Workflow for Photographers, Designers, and Printers has one purpose: to get us all back on the same path to creating predictable color in the RGB-to-CMYK workflow. In a field that often features very strong—and very different—opinions, author Rick McCleary emphasizes the need for cooperation, collaboration, and communication. After first establishing a context for how we all got here, McCleary redefines each partner's role in the process, demystifies the entire RGB-to-CMYK workflow, and offers a clear, step-by-step guide to achieving predictable color on press. Written with exceptional clarity, CMYK 2.0 presents a highly detailed and thoroughly rigorous approach to CMYK color, and it offers a workflow that all photographers, designers, and printers need—one that works. The book's companion website provides a collaborative forum of growing resources and information on all things CMYK.
