This volume contains the proceedings of the Fourth Symposium on Strait Crossings, and deals with technology for bridges, sub-sea tunnels, submerged floating tunnels, floating bridges and ferries. It covers planning, construction and maintenance, as well as technical solutions.

49 CFR Transportation

Surveys the systems, manufacturers and consultants within the global market. City by city, you can analyse and review both current operations and future plans. Provides traffic statistics, fleet lists and numbers in service. Provides contact details and background of approx. 1,500 manufacturers

The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government.

Written for technology professionals and business managers/owners alike, this new, easy-to-understand book provides you with a comprehensive overview of the key legal and economic issues that affect rights of access and use for intellectual property and knowledge assets, with special emphasis on computer software, Internet content,

and digital media. It is the first book to address management of both traditional intellectual property and the broader set of knowledge assets in a single resource. It presents these subjects in a style appropriate for a wide range of practitioners who are not intellectual property or knowledge management specialists, and approaches the challenge of managing these assets from a multidisciplinary perspective.

"This book describes the journey of Singapore's development and the fundamental role that water has had in shaping it. What makes this case so unique is that the quest for self-sufficiency in terms of water availability in a fast-changing urban context has been crucial to the way development policies and agendas have been planned throughout the years"--

Green purchasing - or eco-procurement - by local and central governments has long been recommended in documents such as Agenda 21 to be a key - although sometimes supplemental-ingredient in the achievement of more environmentally responsible economies.

Certainly, sustainable consumption cannot be considered a realistic goal without the full engagement of public authorities. Many initiatives have been undertaken in OECD countries, most successfully in Japan and Denmark where green public purchasing has been proven to be workable and highly effective, while, in other countries, city municipalities have successfully pioneered the development of sophisticated public

environmental purchasing policies. However, for the vast majority of countries and their major cities, the potential for green public purchasing remains woefully untapped. A key question is what would be the environmental impact if the majority of cities in Europe replicated the success stories of those leading the way? Public procurement has, after all, been an important tool in achieving other public policy goals such as defence. Why should it not be used as a tool to defend the environment? The RELIEF project, funded by the EU's "City of Tomorrow and Cultural Heritage" programme was established to answer exactly this question: to define the true potential of eco-procurement and to develop a strategy for change in Europe. Buying into the Environment is the result of the research segment of the project which has now been completed. A further stage-to design a Europe-wide action plan will follow in 2004. The book, organised under the auspices of the International Council on Local Environmental Initiatives (ICLEI) analyses national approaches already tested, and provides in-depth surveys on the pioneer cities such as Hamburg, Malmo and Zurich. Serious attention is given to city-specific hurdles which have been faced and overcome. The most relevant product groups for eco-procurement such as construction, transport, energy, information technology, furniture and food. are also analysed. Uniquely, the book also provides calculations on the environmental benefits potentially achievable through greener purchasing. Tools were developed and tested by the RELIEF researchers on the environmental assessment of products, public buying power and on

evaluations of market conditions in order to provide scenarios for the application of green purchasing at a European level. The conclusions are that there is huge potential for both local and central governments to adapt their behaviour patterns and purchase in a more environmentally responsible way. For example, 18% of the EU's Kyoto Protocol commitment could be achieved if major cities in the European Union purchased green electricity. The results are complemented by new ideas on how best to foster innovation in public contractual arrangements-to encourage the development of products such as super-energy-efficient computers and fuel cells-and how the legal system may require adaptation and reform. The results presented in this book will provide an indispensable resource for municipalities, governments, researchers and business practitioners looking for answers on how public procurement can have a fundamental and manifestly positive effect on the environment.

Southeast Asian Affairs, of which there are now thirty in the series, is an annual review of significant developments and trends in the region. The contributions can be divided into two broad categories. There are those which provide an analysis of major developments during 2002 in individual Southeast Asian countries and in the region generally. Then there are the theme articles of a more specialised nature which deal with topical problems of concern.

This book illustrates the various facets of internationalization in managerial practice, starting with a strategic outline of the many options firms have when

formulating internationalization strategies. Designed as a textbook for Bachelor, Master and MBA classrooms, the core of the book consists of six case studies on firms from diverse industries, such as sporting goods, aviation, grocery discount, motorcycle, computer and IT, and fast-food. The cases present a variety of ways of entering and operating in foreign markets, such as export, franchising, joint ventures, strategic alliances, greenfield-investments, acquisitions and mergers. In addition to market entry strategies, the cases provide readers, educators and students with insights into target market strategies, timing strategies, allocation strategies and coordination strategies of well-known companies.

Internationalization of BusinessCases on Strategy Formulation and ImplementationSpringer

This book reviews the theory and practice of tourism and recreation in rural areas in Europe. Including numerous case studies , 9 chapters cover: the changing nature of recreation and tourism provision in rural areas; the emergence of sustainability in the development debate; the different levels of policy influencing recreation and tourism development, and emphasizing the connectedness between local and global processes; the role and influence of the local community in recreation and tourism; changing patterns of tourism consumption; the changing nature of tourism supply; and the processes relating to the convergence of supply and demand.

minteract and regulate both plasmin activation and function at a cellular level. Plasminogen: Structure, activation, and regulation is divided into two sections. The first section deals with the structure and regulation of plasminogen. The chapters in this section range from discussions of the structure of plasminogen and the regulation of the plasminogen gene to discussions of the structure and regulation of plasminogen activators and plasminogen activator inhibitors.

Also examined is the relatively new data concerning the generation of anti-angiogenic molecules from plasminogen. The second section deals with the physiological and pathophysiological roles of plasminogen as well as the consequences of plasminogen gene knockout.

Discussions in this section include examination of the role of plasminogen in hematopoietic malignancies, tumor cell progression, angiogenesis, mammary gland involution, wound healing, and bone reabsorption. xi xii Preface

In closing, I would like to thank my administrative assistant, Ms. Vi Sommerfeld, for her invaluable assistance and timeless efforts with the organization and editing of the book. Lastly, I would like to acknowledge the efforts of the authors of the individual chapters, who are authorities in this field, for agreeing to take time from busy schedules to provide these chapters in a timely fashion. David Morton Waisman

Asian countries are not homogenous. They are in different stages of social and economic development, with cultural conditions and institutional and legal frameworks varying from one country to another.

Therefore, how water can be successfully managed differs from one country to another. The book provides authoritative analyses of how water is being managed in different Asian countries, ranging from the world's most populous countries like China and India to a city state like Singapore and an island country like Fiji. It also analyses in depth several wide ranging issues like terrorism, human rights, water-energy nexus, and roles of media, along with comprehensive discussions of legal, institutional and regulatory frameworks in an Asian water management context. The overall focus is on how water can be managed efficiently, cost-effectively and equitably in various Asian countries. This book was based on a special issue of the International Journal of Water Resources Development.

With brief biographical details of the climbers.
