The definitive book on steak has never been written-until now "Of all the meats, only one merits its own structure. There is no such place as a lamb house or a pork house, but even a small town can have a steak house." So begins Mark Schatzker's ultimate carnivorous quest. Fed up with one too many mediocre steaks, the intrepid journalist set out to track down, define, and eat the perfect specimen. His journey takes him to all the legendary sites of steak excellence-Texas, France, Scotland, Italy, Japan, Argentina, and Idaho's Pahsimeroi Valley-where he discovers the lunatic lengths steak lovers will go to consume the perfect cut. After contemplating the merits of Black Angus, Kobe, Chianina, and the prehistoric aurochs-a breed revived by the Nazis after four hundred years of extinction-Schatzker adopts his own heifer, fattens her on fruit, acorns, and Persian walnuts, and then grapples with ambivalence when this near-pet appears on his plate. Reminiscent of both Bill Bryson's and Bill Buford's writing, *Steak* is a warm, humorous, and wide-ranging read that introduces a wonderful new travel and food writer to the common table.

Following in the wake of Chang's two other best-selling physical chemistry textbooks (Physical Chemistry for the Chemical and Biological Sciences and Physical Chemistry for the Biosciences), this new title introduces laser spectroscopist Jay Thoman (Williams College) as co-author. This comprehensive new text has been extensively revised both in level and scope. Targeted to a mainstream physical chemistry course, this text features extensively revised chapters on quantum mechanics and spectroscopy, many new chapter-ending problems, and updated references, while biological topics have been largely relegated to the previous two textbooks. Other topics added include the law of corresponding states, the Joule-Thomson effect, the meaning of entropy, multiple equilibria and coupled reactions, and chemiluminescence and bioluminescence. One way to gauge the level of this new text is that students who have used it will be well prepared for their GRE exams in the subject. Careful

Diamonds are a multi-billion dollar business involving some of the world's largest mining companies, a million and a half artisanal diggers, more than a million cutters and polishers and a huge retail jewellery sector. But behind the sparkle of the diamond lies a murkier story, in which rebel armies in Angola, Sierra Leone and the Congo turned to diamonds to finance their wars. Completely unregulated, so-called blood diamonds became the perfect tool for money laundering, tax evasion, drug-running and weapons-trafficking. Diamonds brings together for the first time all aspects of the diamond industry. In it, Ian Smillie, former UN Security Council investigator and leading figure in the blood diamonds campaign, offers a

comprehensive analysis of the history and structure of today's diamond trade, the struggle for effective regulation and the challenges ahead. There is, he argues, greater diversification and competition than ever before, but thanks to the success of the Kimberley Process, this coveted and prestigious gem now represents a fragile but renewed opportunity for development in some of the world's poorest nations. This part of the diamond story has rarely been told. Once a pristine, natural paradise, CHIMA has become a battle ground for eight animal tribes. Best friends are now enemies. The animals fight for control of a natural resource called CHI, a powerful element that is both a source of life and potential destruction. Only a few brave heroes in CHIMA understand the true nature of CHI, and the possible downfall of CHIMA that will result from its misuse. Their stories, and the stories of those who seek to destroy them, are known as... THE LEGENDS OF CHIMA. The third volume in the hit series continues the adventures of Laval and his fellow members of the Lion tribe as they fight against Prince Cragger & the Crocodile tribe to preserve the balance of the mysterious force known as Chi.

Watching the kite ascend higher into the sky, ten-year-old Raghav felt butterflies run deep down his gut, inflating his desire to fly high in a supersonic jet. His kite, entangled with another, crashed onto the ground. The flight took off smoothly from the runway of her heart, only to be hit by turbulence and thunderstorms smashing the plane into an abandoned sea full of gloominess. There he saw a lighthouse, a ray of hope. She became his lifeguard and taught him to swim through the storm. Like a guiding angel, she enlightened him towards the path of self-discovery leading to his journey to the island called 'Bollywood.' Raghav rode on a roller coaster encompassing love, passion, and conflicts. Hopping from one town to another in search of his purpose, he landed in the city of love and lights, Paris, where he saw the horizon, an illusion of his world merging with hers. It may be hard to believe in an era of Walmart, Citizens United, and the Koch brothers, but corporations are on the decline. The number of American companies listed on the stock market dropped by half between 1996 and 2012. In recent years we've seen some of the most storied corporations go bankrupt (General Motors, Chrysler, Eastman Kodak) or disappear entirely (Bethlehem Steel, Lehman Brothers, Borders). Gerald Davis argues this is a root cause of the income inequality and social instability we face today. Corporations were once an integral part of building the middle class. He points out that in their heyday they offered millions of people lifetime employment, a stable career path, health insurance, and retirement pensions. They were like small private welfare states. The businesses that are replacing them will not fill the same role. For one thing, they employ far fewer people—the combined global workforces of Facebook, Yelp, Zynga, LinkedIn, Zillow, Tableau, Zulily, and Box are smaller than the number

of people who lost their jobs when Circuit City was liquidated in 2009. And in the “sharing economy,” companies have no obligation to most of the people who work for them—at the end of 2014 Uber had over 160,000 “driver-partners” in the United States but recognized only about 2,000 people as actual employees. Davis tracks the rise of the large American corporation and the economic, social, and technological developments that have led to its decline. The future could see either increasing economic polarization, as careers turn into jobs and jobs turn into tasks, or a more democratic economy built from the grass roots. It's up to us.

While the Internet revolution has vastly improved communication among businesses and individuals, pressure has been building for faster and less expensive broadband data services. Such services could not only yield vastly improved and less expensive provision of traditional applications such as voice telephony and Web browsing, but could also enable new applications such as Internet-based television, videoconferencing, and software distribution. However, broadband services and prices have not kept pace either with demand or with progress in information technology. This new book analyzes the markets and policy issues underlying the broadband dilemma. Charles Ferguson asserts that the Telecommunications Act of 1996 and federal policy have failed to provide sufficient levels of new entry, competition, and innovation in the local telecommunications market, which remains dominated by monopoly telephone companies. New entrants and Internet-based firms such as competitive local exchange carriers (CLECs), Internet service providers (ISPs), and enhanced service providers (ESPs) remain disadvantaged relative to the monopoly

incumbent local exchange carriers (ILECs). Flawed policy has also allowed ILECs to continue to engage in monopolistic practices, mergers, and anticompetitive conduct. Through a combination of inefficiency and rational monopolistic conduct, the ILECs are thus able to retard the deployment of new technology and services through delaying tactics, regulatory procedures, litigation, and political influence. Competition from the cable television (CATV) industry probably cannot fully address these problems. The CATV industry cannot compete in most business markets. In residential markets CATVs competitive potential is greater, but CATV vendors incentives to favor their own networks, services, and proprietary content raise major concerns analogous to those raised by the ILECs. The combined result of these market and policy failures is inadequate technological progress, innovation, and productivity growth in advanced Internet services and in telecommunications services generally. This significantly retards U.S. and global economic growth, perhaps by as much as one percent per year. Ferguson believes federal policy must be adjusted to ensure the robust infrastructure necessary for advanced Internet services, electronic commerce, open-systems HDTV, videoconferencing, and improved voice telephony. Ferguson recommends several policy changes, including increased regulatory surveillance of ILEC conduct, antitrust actions against
