It's a story where money can materialize out of thin air, where frisbees and whiskey sour glasses might levitate, and where a very alluring Museum of The Gods out in the desert of New Mexico becomes the nexus of a saga that sprawls over the 1970s, '80s and '90s. As one reader has written: "A world of fascination, joy and heartache with galloping plot and languid rumination, sweeping scope and intricate connections, playful befuddlement and razor-sharp insight. . . "

'What is it, Gran?' Peter demanded, pulling urgently at her sleeve. 'What's the matter?' Meg didn't answer. She was staring down at the book they had been reading together, a shocked expression on her face. For there on the page she had just turned was a picture of the thing itself. Not a photograph, naturally, that would have been impossible. This was merely an artist's impression. Still, there was no mistaking what she was looking at: the self same creature she had encountered all those years before, when she had been not much older than Peter. What a long time ago that was! Over forty years, and in all that time she hadn't mentioned what she had seen to anyone. She had thought about it often enough, though. And now, confronted by the creature once more, here in the pages of a book, she almost felt that the long years had never passed. Those ancient eyes, gazing up at her from the painting, seemed to plunge her back in time, back to the lonely country road which ran between school and her grandmother's farm. It was as if she were actually there, surrounded by the sounds and smells of the bush; as if she were a fourteen-year-old girl once more, hurrying through the dusk towards that first

unsettling moment of contact ... The 'creature' referred to here is a marsupial leopard. Is it real, or a figment of the imagination?

This is the first textbook on pattern recognition to present the Bayesian viewpoint. The book presents approximate inference algorithms that permit fast approximate answers in situations where exact answers are not feasible. It uses graphical models to describe probability distributions when no other books apply graphical models to machine learning. No previous knowledge of pattern recognition or machine learning concepts is assumed. Familiarity with multivariate calculus and basic linear algebra is required, and some experience in the use of probabilities would be helpful though not essential as the book includes a self-contained introduction to basic probability theory.
