The study of wave propagation seems very remote to many engineers, even to those who are involved in structural dynamics. I think one of the reasons for this is that the examples usually taught in school were either so simple as to be inapplicable to real world problems, or so mathematically abstruse as to be intractable. This book contains an approach, spectral analysis, that I have found to be very effective in analyzing waves. What has struck me most about this approach is how I can use the same analytic framework to do predictions as well as to manipulate experimental data. As an experimentalist, I had found it very frustrating having my analytical tools incompatible with my experiments. For example, it is experimentally impossible to generate a step-function wave and yet that is the type of analytical solution available. Spectral analysis is very encompassing - it touches on analysis, numerical methods, and experimental methods. I wanted this book to do justice to its versatility, so many subjects are introduced. As a result some areas may seem a little thin and I regret this. But I do hope, nonetheless, that the bigger picture, the unity, comes across. To encourage you to try the spectral analysis approach I have included complete source code listings to some of the computer programs mentioned in the text.

'What is it, Gran?' Peter demanded, pulling urgently at her sleeve. 'What's the matter?' Meg didn't answer. She was staring down at the book they had been reading together, a shocked expression on her face. For there on the page she had just turned was a picture of the thing itself. Not a photograph, naturally, that would have been impossible. This was merely an artist's impression. Still, there was no mistaking what she was looking at: the self same creature she had encountered all those years before, when she had been not much older than Peter. What a long time ago that was! Over forty years, and in all that time she hadn't mentioned what she had seen to anyone. She had thought about it often enough, though. And now, confronted by the creature once more, here in the pages of a book, she almost felt that the long years had never passed. Those ancient eyes, gazing up at her from the painting, seemed to plunge her back in time, back to the lonely country road which ran between school and her grandmother's farm. It was as if she were actually there, surrounded by the sounds and smells of the bush; as if she were a fourteen-year-old girl once more, hurrying through the dusk towards that first unsettling moment of contact ... The 'creature' referred to here is a marsupial leopard. Is it real, or a figment of the imagination?
