The CAM coach brings together the writing partnership of Mark Shields and Simon Martin. Mark is a world leading, internationally renowned, multi award winning, Life and Business Strategist and creator of the CAM coaching methodology known today as CAM Transformational Coaching. Simon is a world champion athlete, veteran natural health journalist and editor of IHCAN magazine for practitioners of complementary and alternative medicine. Between them they have come up with a host of proven secrets, strategies and evidenced techniques of how to successfully set up and run a Complementary Health Practice. The CAM coach is based upon Mark Shields Coaching for Practitioners Series which has been proven to help, coach, inspire and motivate many practitioners from different corners of the world over the years This together with expert contributions from industry leading experts such as Mike Ash, Jayney Goddard, Anthony Haynes and Kate Neil makes the CAM Coach a unique and valuable resource for anyone looking to work successfully in the Complementary and Alternative Medicine industry.

In a clear and readable style, Bill Bolton addresses the basic principles of modern instrumentation and control systems, including examples of the latest devices, techniques and applications. Unlike the majority of books in this field, only a minimal prior knowledge of mathematical methods is assumed. The book focuses on providing a comprehensive introduction to the subject, with Laplace presented in a simple and easily accessible form, complimented by an outline of the mathematics that would be required to progress to more advanced levels of study. Taking a highly practical approach, Bill Bolton combines underpinning theory with numerous case studies and applications throughout, to enable the reader to apply the content directly to real-world engineering contexts. Coverage includes smart instrumentation, DAQ, crucial health and safety considerations, and practical issues such as noise reduction, maintenance and testing. An introduction to PLCs and ladder programming is incorporated in the text, as well as new information introducing the various software programmes used for simulation. Problems with a full answer section are also included, to aid the reader's self-assessment and learning, and a companion website (for lecturers only) at <http://textbooks.elsevier.com> features an Instructor's Manual including multiple choice questions, further assignments with detailed solutions, as well as additional teaching resources. The overall approach of this book makes it an ideal text for all introductory level undergraduate courses in control engineering and instrumentation. It is fully in line with latest syllabus requirements, and also covers, in full, the requirements of the Instrumentation & Control Principles and Control Systems & Automation units of the new Higher National Engineering syllabus from Edexcel. \* Assumes minimal prior mathematical knowledge, creating a highly accessible student-centred text \* Problems, case studies and applications included throughout, with a full set of answers at the back of the book, to aid student learning, and place theory in real-world engineering contexts \* Free online lecturer resources featuring supporting notes, multiple-choice tests, lecturer handouts and further assignments and solutions

When Mona, a young Arab-American girl, journeys with her father to the Middle East to meet her grandmother, she discovers that they share the universal bonds of family love

In the world of Delirium, love is a disease. And like all eighteen-year-olds, Lena and Hana must take the cure. At the start of their last summer of freedom, they were the closest of friends. Until Hana made a decision that tore them apart . . . In Delirium, we heard from Lena. Now, Hana gets to tell her side of the story. And nothing is what we first thought. Hana is a powerful, moving and beautifully told original eBook short story, with a shocking twist that will leave you with your heart in your mouth.
