Every person has a story, a personal narrative that informs their life, their decisions, and their way of thinking. But did you know that it also affects the wiring of your brain? Renowned psychiatrist and professor at Harvard Medical School John Sharp, M.D., offers an eight-step process to discovering your unconscious narrative and using your new insight to eradicate the "false truth" that has been at the core of your self-sabotage. His unique approach integrates four core domains of applied psychology —control mastery theory, attachment theory, narrative therapy, and positive psychology —with his own research and professional experience to construct an insightful and soul-searching path to insight. Dr. Sharp's approach is simple and accessible, with the power to wield profound results. Through exercises, quizzes, thorough exploration of case studies, and clear guidance, you will be able to find your false truth, rewrite your story, and transform your life. Once you have flipped the switch of insight, nothing can hold back the light that shines from within.

This book outlines the new concept of user engineering and covers the diversity of users, along with the business process that includes the design and the user's experience processes. Although the concept of user experience (UX) has become popular, the definition and the methodology are still ambiguous. User engineering is similar to the user-centered design, but differs in that its scope is not limited to the design process but concerns the whole manufacturing process and the whole usage process, i.e., the whole lifecycle of an artifact. User's perspective is strongly emphasized in this book, hence, its stance is far from that of the marketing approach that usually fails to notice the life and experiences of users after the purchase of an artifact as consumers. Theory of User Engineering differentiates between the quality in design and the quality in use, and the objective quality characteristics and the subjective quality characteristics. In addition to the user research using ethnographic methods, the author introduces a new approach based on the artifact evolution theory that can be adopted in the planning stage.

The History of Futurism: The Precursors, Protagonists, and Legacies addresses the history and legacy of what is generally seen as the founding avante-garde movement of the twentieth century. Geert Buelens, Harald Hendrix, and Monica Jansen have brought together scholarship from an international team of specialists to explore the Futurism movement as a multidisciplinary movement mixing aesthetics, politics, and science with a particular focus on the literature of the movement.

His name is Dink. He has adventures all around the world... And he's an idiot. If Arthur Conan Doyle watched Fleischer Brother cartoons all day in the hospital after sustaining a severe head injury, he might write something like this. If Jack Handey wrote for Weird Tales Magazine, circa 1934, and had a pretty serious substance abuse problem, he might sue me for plagiarism. If Forrest Gump, instead of being a kind and gentle man who seems dim but has hidden depths was, you know, the opposite of that; he might be Dink. If you like pulp fiction, jokes, and you're not some kind of Brain Criminal, you'll definitely enjoy this book.

Without practice, your child's Dinka and English vocabulary will not grow. My First Dinka Dictionary is a picture book for introducing your multilingual child to Dinka and English. "This volume explores both simple and sophisticated techniques used in the study of different types of lateralization of brain and behavior. Research in this field increases our understanding of various brain functions in humans, other vertebrate species, and invertebrates. The book is divided into five parts: behavioral methods; neurobiological methods; electroencephalographic, imaging, and neuro-stimulation methods; genetic techniques; and development of lateralization. Part I addresses measuring lateralization by scoring behavior induced by inputs to one or the other side of the brain in a range of species. Part II covers neurobiological methods used to reveal lateralization, such as lesion studies, electrophysiology and pharmacology, early gene expression, and new optogenetic methods. Part III looks at imaging techniques, electroencephalographic techniques, and transcranial stimulation to reveal lateralization. Part IV describes techniques used to study the role of genes in the development and establishment of brain asymmetry in humans and other species. Lastly, Part V refers to methods used in the study of development of lateralization through the manipulation of sensory exposure, hormone levels, and in model systems. In Neuromethods series style, chapters

include the kind of detail and key advice from the specialists needed to get successful results in your own laboratory. Cutting-edge and thorough, *Lateralized Brain Function: Methods in Human and Non-Human Species* is a valuable resource for investigating lateralization in a broad range of species and provides excellent advice for both new and veteran researchers." -- OCLC.

In constant effort to eliminate mine danger, international mine action community has been developing safety, efficiency and cost-effectiveness of clearance methods. Demining machines have become necessary when conducting humanitarian demining where the mechanization of demining provides greater safety and productivity. *Design of Demining Machines* describes the development and testing of modern demining machines in humanitarian demining. Relevant data for design of demining machines are included to explain the machinery implemented and some innovative and inspiring development solutions. Development technologies, companies and projects are discussed to provide a comprehensive estimate of the effects of various design factors and to proper selection of optimal parameters for designing the demining machines. Covering the dynamic processes occurring in machine assemblies and their components to a broader understanding of demining machine as a whole, *Design of Demining Machines* is primarily tailored as a text for the study of the fundamentals and engineering techniques involved in the calculation and design of demining machines. It will prove as useful resource for engineers, designers, researchers and policy makers working in this field. Learn the underlying principles of speaking both "horse" and "human" from an internationally acclaimed horseman. *Life Lessons from a Ranch Horse* describes celebrated horse trainer Mark Rashid's experiences with one special—and especially challenging—horse named Buck. Mark finds that Buck's unique personality teaches him a wealth of information about how to build a strong relationship with what may initially seem like a difficult horse. During his time with Buck, Mark not only trains Buck but also observes how Buck "trains" other horses in order to maintain a stable and respectful group. Mark comes to understand that there are six underlying principles to both Buck and Mark's most successful horse training techniques: non-confrontation, planning ahead, patience, persistence, consistency, and "fix it and move on." The second half of the book is devoted to demonstrating how horse owners can apply the six principles to their own experiences in horse training. Mark Rashid is unique among writers of horse training books for his skill at teaching trainers to lead by example rather than by force, using clear and consistent methods. In the afterword, Mark Rashid reflects on what he has learned since first writing about Buck, and how Buck's life allowed Mark to dramatically improve his own emotional and physical well-being. *Life Lessons from a Ranch Horse* is essential reading for all compassionate horse owners who care about cultivating a mutually respectful and satisfying relationship with their horses. Portrays the migration of a Puerto Rican family from the countryside to the San Juan ghetto and eventually to Spanish Harlem in New York City.

For nearly 80 years, shaft-drive boxer twins have traditionally formed the backbone of the BMW motorcycle line-up. For many enthusiasts of the Bavarian marque the classic BMW twin was the R90S of 1973-76. Over the decades, successive generations of durable machines - including the R100S, fully-faired R100RS, four-cylinder K-series, high-performance R1100RS and an entire family of touring and sporting models ranging from 850 to 1200cc - would ensure the BMW boxer twins a place in the Haynes "Great Bikes" series. This book covers: historical context, racing, the wartime R75 and R69S; the "75" series which enabled BMW to compete with the high-performance Japanese machines; the R90S, the "76" and Superbike performance; the R100RS, the "77" and the touring R100RT; smaller twins, smaller potential; the R89G/S, including a Paris-Dakar version; rationalization of the boxer range, and the new twins that included four-valve heads and electronic engine management; and technical specifications from 1969 to 2003.

Original. (All Users). Jennifer Traig's memoir *Devil in the Details* paints a portrait of a well-meaning Jewish girl and her good-natured parents, and takes a very funny, very sharp look back at growing up with obsessive-compulsive disorder. Recalling the agony of growing up an obsessive-compulsive religious fanatic, Traig fearlessly confesses the most peculiar behavior like tirelessly scrubbing her hands for a full half hour before dinner, feeding her stuffed animals before herself, and washing everything she owned because she thought it was contaminated by pork fumes. Jennifer's childhood mania was the result of her then undiagnosed OCD joining forces with her Hebrew studies-what psychiatrists call scrupulosity While preparing for her bat mitzvah, she was introduced to an entire set of arcane laws and quickly made it her mission to follow them perfectly. Her parents nipped her religious obsession in the bud early on, but as her teen years went by, her natural tendency toward the extreme led her down different paths of adolescent agony and mortification. Years later, Jennifer remembers these scenes with candor and humor. In the bestselling tradition of *Running with Scissors* and *A Girl Named Zippy*, Jennifer Traig tells an unforgettable story of youthful obsession.

"It's sad, isn't it? The dead horse of a life we beat, all the wilder, all the harder the deader it gets. On the other hand, there are some nice shops in the area." Thom Pain has come to a certain point in his life. Maybe you have too. His entire existence is ordinary; but that ordinariness is a revelation and a wonder and a curiosity. To him at least. He'd better hope so. It's all he has (except maybe a dictionary and an old love letter). Comic and disturbing, this provocative monologue charts one man's anguished journey from shattered childhood dreams and trauma to the tenuous, if guarded, optimism of adulthood, told in dangerous intimacy by a voice loaded with wry humor and deceptive charm.
