Why Not? After all, no-one had ever done it before. It would be one of the longest of all overland journeys – half way round the world, from the English Channel to Singapore.

They knew that several expeditions had already tried it. Some had got as far as the deserts of Persia; a few had even reached the plains of India. But no one had managed to go on from there: over the jungle clad mountains of Assam and across northern Burma to Thailand and Malaya. Over the last 3,000 miles it seemed there were 'just too many rivers and too few roads'. But no-one really knew ... In fact, their problems began much earlier than that. As mere undergraduates, they had no money, no cars, nothing. But with a cool audacity, which was to become characteristic, they set to work – wheedling and cajoling. First, they coaxed the BBC to come up with some film for a possible TV series. They then gently persuaded the manufacturers to lend them two factory-fresh Land Rovers. A publisher was even sweet-talked into giving them an advance on a book. By the time they were ready to go, their sponsors (more than 80 of them) ranged from whiskey distillers to the makers of collapsible buckets. In late 1955, they set off. Seven months and 12,000 miles later, two very weary Land Rovers, escorted by police outriders, rolled into Singapore – to flash bulbs and champagne. Now, fifty years on, their book, 'First Overland', is republished – with a foreword by Sir David Attenborough. After all, it was he who gave them that film.

A profusely illustrated, detailed look at this British icon.

Ever since I learnt that people drive around Africa in 4x4s, sleeping in rooftop tents for months at a time, I dreamed of joining them. My obsession became reality in January 2020, when together with my boyfriend I bought a 20-year-old dark blue Land Rover Defender. She's called Nyala. After a few test weekends to check out the car, we were ready to go. Coronavirus struck. Borders closed, hard lockdown began. Our plans to spend six months overlanding through southern Africa were put on hold. Fast-forward six months, and we were ready to go again. Chasing Ostriches chronicles this journey of exploration through South Africa. We roamed the backroads and national parks in our trusty (and not so trusty at times) Defender. We climbed misty mountains, camped in empty deserts, sunbathed on tropical beaches, and saw wildlife galore under the hot African sky. I came back with dirty clothes, an even dirtier car, and memories to last a lifetime. I hope my book will help you do the same.

This book will be a completely revised and updated version of the Land Rover 90, 110 and Defender Restoration Manual (H600), containing a great deal of new material, particularly on later Defender models which have become available since the original edition.

This report examines the application of plastics in European cars in the middle of the year 2000. It evaluates the changes in use and considers possible developments over the next decade. The use of plastics for specific components is examined, comparison is made between competitive materials and examples of commercial application are included. Estimates are presented for current plastics usage in European cars with forecasts to 2008.

Pandemics. The word conjures up images of horrific diseases sweeping the globe and killing everyone in their path. But such highly lethal illnesses almost never create pandemics. The reality is deadly serious but far more subtle. In *Pandemics: What Everyone Needs to Know*®, Peter Doherty, who won the Nobel Prize for his work on how the immune system recognizes virus-infected cells, offers an essential guide to one of the truly life-or-death issues of our age. In concise, question-and-answer format, he explains the causes of pandemics, how they can be counteracted with vaccines and drugs, and how we can better prepare for them in the future. Doherty notes that the term "pandemic" refers not to a disease's severity but to its ability to spread rapidly over a wide geographical area. Extremely lethal pathogens are usually quickly identified and confined. Nevertheless, the rise of high-speed transportation networks and the globalization of trade and travel have radically accelerated the spread of diseases. A traveler from Africa arrived in New York in 1999 carrying the West Nile virus; one mosquito bite later, it was loose in the ecosystem. Doherty explains how the main threat of a pandemic comes from respiratory viruses, such as influenza and SARS, which disseminate with incredible speed through air travel. The climate disruptions of global warming, rising population density, and growing antibiotic resistance all complicate efforts to control pandemics. But Doherty stresses that pandemics can be fought effectively. Often simple health practices, especially in hospitals, can help enormously. And research into the animal reservoirs of pathogens, from SARS in bats to HIV in chimpanzees, show promise for our prevention efforts. Calm, clear, and authoritative, Peter Doherty's *Pandemics* is one of the most critically important additions to the *What Everyone Needs to Know*® series. *What Everyone Needs to Know*® is a registered trademark of Oxford University Press.

A landmark new history from design journalist Nick Hull, *Land Rover Design – 70 years of Success* offers a detailed insight to the company's design story, from the early days of Land Rover in Solihull to the latest generation of the Range Rover Velar in 2018. The Land Rover was born from a desperate need by the Rover Company to develop a stop-gap model to provide cashflow in the post-war years. The original aim of a simple 4x4 agricultural tool soon developed into a multi-purpose vehicle that became the mainstay of the British Army and produced numerous offshoots for the emergency services, police, forestry and aid agencies worldwide. This book details the personalities involved in the various projects since the late 1940s up to today: the designers, modellers and studio engineers. It charts the

development of Land Rover and Range Rover projects in the UK, particularly those designed in the Gaydon studio that opened in 1996, and is still a key part of JLR's design resource. From the early days of chalk drawings and wooden models to today's digital renderings and milled clays for the latest Range Rover Evoque, Land Rover's designers and technicians have never been short of creativity. This book tells their story, in their own words, and is a fitting tribute to the spirit and ethos of Land Rover design and engineering.

A quarter of a century ago, the Land Rover Discovery defined at a stroke how traditional 4 x 4 all-terrain ability could co-exist with family-estate practicality at an affordable price. Since 1989, the Discovery has gone through several iterations, but its essential qualities have remained unchanged. Practical, capable, and above all completely distinctive - the stepped roof seemed odd at first but now defines the Discovery shape - the Discovery has gone on to become one of Land Rover's best-loved products. Land Rover Discovery - 25 Years of the Family 4 x 4 looks in detail at the four generations of Discovery, including full specification details and production histories. Topics covered include the design and development of the original Discovery in the late 1980s, and the move into North America; the new 300Tdi engine and R380 gearbox of 1994, and the BMW takeover; Series II models of 1998-2004, and Land Rover's move from BMW to Ford; Discovery 3/'LR3' - 2004-2009, and the new TDV6 engine, developed by Jaguar; Discovery 4/'LR4' - the all-purpose family luxury car; special editions and derivatives of all four generations of Discovery, including Discoverys for the emergency services and the Camel Trophy and G4 Challenge competition vehicles. Superbly illustrated with 351 colour photographs.

The provision of support for troops in Iraq and Afghanistan is made more difficult because they operate in remote locations and harsh conditions. Despite the challenging operational environments, the Ministry of Defence (MOD) has successfully delivered around 300,000 personnel and 90,000 tonnes of freight to Iraq and Afghanistan over the last two years. However, it has not consistently met its targets for delivering supplies in a timely fashion. The MOD is taking measures to improve the effectiveness of its supply chain; and the amount of time a unit waits for items to be delivered has reduced by half in Afghanistan and a third in Iraq. 4.2 billion has been approved to upgrade or buy new equipment to meet urgent requirements in the two theatres. The NAO found that the availability of this equipment has generally met or exceeded targets, though there have been spares shortages with some fleets particularly when the vehicle is used for a different purpose than intended. The availability and serviceability of helicopters has exceeded MOD targets, although prioritisation of spare parts for operations has led to reduced availability in the UK. There are also shortages of equipment for Service personnel in the UK to train with, prior to deployment overseas. Accommodation, medical and welfare services to Service personnel on operations are generally satisfactory although provision at the smaller patrol bases is more basic. The helicopter borne Medical Emergency Response Teams provide quick, life-saving medical support to casualties and evacuate them speedily to hospital.
