

## Lathes Safety Me

In high explosives machining the three major concerns are safety, reliability, and ease of operation. With these three concerns as our main goals, LLL's EE and ME departments worked together to modify a LeBlond precision lathe for high explosives machining. The result is a unique, remote-controlled lathe which has extensive mechanical and electronics modifications. The lathe has been operating safely and successfully at Site 300's HE Test Facility since April 1978.

Metal Lathe for Home Machinists is a project-based course that provides a complete introduction to the lathe and lathe metalworking. This book takes beginners through all the basic techniques needed to tackle a wide range of machining operations. Advance through a series of practice projects that teach how to use the lathe and develop essential skills through practical application. Contained 12 lathe turning projects to develop confidence and become an accomplished home shop machinist, each project is designed to develop essential lathe skills that the reader will use again and again. All of the projects are extensively illustrated and full working drawings accompany the text. The book advances from basic projects to higher levels of difficulty as the course progresses, from a simple surface gauge to a milling cutter chuck where precision and concentricity is vital. After completing this course, the reader will have amassed a wealth of practical skills and a range of useful workshop tools and equipment, while lathe owners with more advanced skills will discover new techniques.

Millions of people worldwide are dying of RAPAIDS, a unique new form of biological terrorism, unleashed by a militant terrorist group seeking ultimate power. While desperately working on a cure, Andrew Roberts, a brilliant medical geneticist, and several of his colleagues are enticed into a covert scientific military operation that takes them on a horrendous journey. They will travel to Mount Ararat to find Noah's Ark and the secret that it holds; the Lathe of God, a legendary device housing a gene library of all known life that may save the world from the terrorist weapon that has gone terribly wrong. To undertake this journey, they must each overcome their own personal fears and cling to their shattered faith. Can they overcome the challenges of the mountain and the terrorist factions that seek to destroy them at every turn? Does this one thing that can save the world really exist, or is the fate of mankind sealed? Only by working together can they attempt to undertake and be successful in a quest for something that has eluded archaeologists and religious experts for centuries.

This is a real-life story. You will read and get an in-depth look of my childhood, family, my teen years, the years I spent in the service, running a business and all the good and bad in my life, that I had, clear up till I had lost it, where I was put in the hospital and then diagnosed with bipolar affective disorder/schizo affective disorder. It all started forty days before Easter of 2006, having visions or insights into the Bible while making a new law for the people, also having vibes and connections with spirits that allowed me to believe that the end of the world was upon us. This true life story takes you on a journey, which is believed to have come from God. During the second part of the story, I fight against evil or Satan himself, which makes me believe that I may possibly be the Antichrist if I don't do the right thing in order to save the world. I would tell people that I'm the "Chosen One"—Jesus Christ, the Second Coming, the Messiah, the Son of God or even the Lamb of God.

Using castings from your charcoal foundry (see Book 1 in the series: The Charcoal Foundry by David Gingery) and simple hand methods (no machine tools needed!) you can build a sturdy and accurate bed for a metal lathe. Then additional castings, common hardware items and improvised equipment will add the headstock, tailstock, carriage and all the remaining parts to complete the lathe. Illustrated with photos and drawings to show you all you need to know about patterns, molding, casting and finishing the parts. The lathe specs. include a 7" swing over the bed and 12" between centers. Adjustable tailstock with set-over for taper turning. Adjustable gibs in sliding members and adjustable sleeve bearings in the headstock. A truly practical machine capable of precision work. Once you have a foundry to cast the parts and a lathe to machine them you can tackle more exotic projects.
