This open access book provides a comprehensive overview of the core subjects comprising mathematical curricula for engineering studies in five European countries and identifies differences between two strong traditions of teaching mathematics to engineers. The collective work of experts from a dozen universities critically examines various aspects of higher mathematical education. The two EU Tempus-IV projects - MetaMath and MathGeAr - investigate the current methodologies of mathematics education for technical and engineering disciplines. The projects aim to improve the existing mathematics curricula in Russian, Georgian and Armenian universities by introducing modern technology-enhanced learning (TEL) methods and tools, as well as by shifting the focus of engineering mathematics education from a purely theoretical tradition to a more applied paradigm. MetaMath and MathGeAr have brought together mathematics educators, TEL specialists and experts in education quality assurance form 21 organizations across six countries. The results of a comprehensive comparative analysis of the entire spectrum of mathematics courses in the EU, Russia, Georgia and Armenia has been conducted, have allowed the consortium to pinpoint and introduce several

modifications to their curricula while preserving the generally strong state of university mathematics education in these countriesThe book presents the methodology, procedure and results of this analysis. This book is a valuable resource for teachers, especially those teaching mathematics, and curriculum planners for engineers, as well as for a general audience interested in scientific and technical higher education. Arabic is one of the world's largest languages, spoken natively by nearly 300 million people. By strength of numbers alone Arabic is one of our most important languages, studied by scholars across many different academic fields and cultural settings. It is, however, a complex language rooted in its own tradition of scholarship, constituted of varieties each imbued with unique cultural values and characteristic linguistic properties. Understanding its linguistics holistically is therefore a challenge. The Oxford Handbook of Arabic Linguistics is a comprehensive, one-volume guide that deals with all major research domains which have been developed within Arabic linguistics. Chapters are written by leading experts in the field, who both present state-of-the-art overviews and develop their own critical perspectives. The Handbook begins with Arabic in its Semitic setting and ends with the modern dialects; it ranges across the traditional - the classical Arabic grammatical and lexicographical traditions--to the

contemporary--Arabic sociolinguistics, Creole varieties and codeswitching, psycholinguistics, and Arabic as a second language - while situating Arabic within current phonetic, phonological, morphological, syntactic and lexicological theory. An essential reference work for anyone working within Arabic linguistics, the book brings together different approaches and scholarly traditions, and provides analysis of current trends and directions for future research.

This superb edition contains two of Aristotle's greatest writings in authoritative translations. The Rhetoric is translated by Cambridge scholar John Henry Freese, and The Poetics is translated by Oxford scholar of classics Ingram Bywater. Aristotle's legendary treatise on speech explains and instructs on the powers of oratory to move and persuade people. Composed amid the popular Greek culture, in which aspiring and reigning politicians would perfect the oratorical arts to influence voting and their subjects, Rhetoric is a summation of an art whose poignancy and power could change the face of an entire society. The Poetics of Aristotle sets out the essential nature of drama and the performing arts. Each chapter deals with a different element of drama and its composition, discussing the process by which Greek society had come to define its written literature.

This volume focuses on research in bilingual and multilingual education. It discusses the results of research conducted in different multilingual educational contexts and particularly in Basque schools and universities where Basque, Spanish and English are used as subjects and as languages of instruction. This collection shows students of English and applied linguistics ways in which language and literary study can be integrated. By drawing on a wide range of texts by mainly British and American writers, from a variety of different periods, the contributors show how discourse stylistics can provide models for the systematic description of, for example, dialogue in fiction; language of drama and balladic poetry; speech presentation; the interactive properties of metre; the

communicative context of author/reader. Among the texts examined are novels, poetry and drama by major twentieth-century writers such as Joyce, Auden, Pinter and Hopkins, as well as examples from Shakespeare, Donne and Milton. Each chapter has a wide range of exercises for practical analysis, an extensive glossary and a comprehensive bibliography with suggestions for further reading. The book will be particularly useful to undergraduate students of English and applied linguistics and advanced students of modern languages or English as a foreign language.

This textbook provides an accessible introduction to the study of word-formation, that is, the ways in which new words are built on the bases of other words (e.g. happy - happy-ness), focusing on English. The book's didactic aim is to enable students with little or no prior linguistic knowledge to do their own practical analyses of complex words. Readers are familiarized with the necessary methodological tools to obtain and analyze relevant data and are shown how to relate their findings to theoretical problems and debates. The book is not written in the perspective of a particular theoretical framework and draws on insights from various research traditions, reflecting important methodological and theoretical developments in the field. It is a textbook directed towards university students of English at all levels. It can also serve as a source book for teachers and advanced students, and as an up-to-date reference concerning many word-formation processes in English.

With the discovery of conditioned reflexes by I. P.
Pavlov, the possibilities for experimenting, following
the example set by the classical, exact sciences,
were made available to the behavioral sciences.
Many psychologists hoped that the component parts
of behavior had also been found from which the
entire, multifaceted cosmos of behavior could then
be constructed. An experimentally oriented
psychology subsequently developed including the
influential school of behaviorism.This first text on
human ethology presents itself as a unified work,
even though not every area could be treated with
equal depth. For example, a branch of ethology has
developed in the past decade which places particular
emphasis on ecology and population genetics. This
field, known as sociobiology, has enriched
discussion beyond the boundaries of behavioral
biology through its stimulating, and often
provocative, theses.After vigorous debates between
behaviorists, anthropologists, and sociologists, we
have entered a period of exchange of thoughts and a
mutual approach, which in many instances has led to
cooperative projects of researchers from different
disciplines. This work offers a biological point of view
for discussion and includes data from the author's
cross-cultural work and research from the staff of his

institute. It confirms, above all else, the astonishing unity of mankind and paints a basically positive picture of how we are moved by the same passions, jealousies, friendliness, and active curiosity.The need to understand ourselves has never been as great as it is today. An ideologically torn humanity struggles for its survival. Our species, does not know how it should compensate its workers, and it experiments with various economic systems, constitutions, and forms of government. It struggles for freedom and stumbles into newer conflicts. Population growth is apparently completely out of hand, and at the same time many resources are being depleted. We must consider our existence rati This book constitutes the proceedings of the 21st International Conference on Speech and Computer, SPECOM 2019, held in Istanbul, Turkey, in August 2019. The 57 papers presented were carefully reviewed and selected from 86 submissions. The papers present current research in the area of computer speech processing including audio signal processing, automatic speech recognition, speaker recognition, computational paralinguistics, speech synthesis, sign language and multimodal processing, and speech and language resources. Outline of English Lexicology: Lexical Structure, Word Semantics and Word Formation. This practical coursebook introduces all the basics of semantics in a simple, step-by-step fashion. Each

unit includes short sections of explanation with examples, followed by stimulating practice exercises to complete in the book. Feedback and comment sections follow each exercise to enable students to monitor their progress. No previous background in semantics is assumed, as students begin by discovering the value and fascination of the subject and then move through all key topics in the field, including sense and reference, simple logic, word meaning and interpersonal meaning. New study guides and exercises have been added to the end of each unit to help reinforce and test learning. A completely new unit on non-literal language and metaphor, plus updates throughout the text significantly expand the scope of the original edition to bring it up-to-date with modern teaching of semantics for introductory courses in linguistics as well as intermediate students.
Drawing on Freud, Mead, Erikson, Parsons and Habermas, William Bloom relates mass psychological processes to international relations. This book presents papers from the International Conference on Integrating Engineering Education and Humanities for Global Intercultural Perspectives (IEEHGIP 2020), held on 25–27 March 2020. The conference brought together researchers and practitioners from various disciplines within engineering and humanities to offer a range of perspectives. Focusing on, but not limited to,

Content and Language Integrated Learning (CLIL) in Russian education the book will appeal to a wide academic audience seeking ways to initiate positive changes in education.

Toward a Science of Translating, first published in 1964, is still very much in demand today. Written by a linguist and anthropologist with forty years of experience in the field of language and religion, this work describes the major components of translating; setting the translating into the context of historical changes in principles and procedures over the last two centuries. With an emphasis on texts being understood within their cultural contexts, one of the reasons for its continuing relevance is the broad number of illustrative examples taken from field experience of translators in America, Africa, Europe and Asia.

?This book focuses on the uses of big data in the context of higher education. The book describes a wide range of administrative and operational data gathering processes aimed at assessing institutional performance and progress in order to predict future performance, and identifies potential issues related to academic programming, research, teaching and learning?. Big data refers to data which is fundamentally too big and complex and moves too fast for the processing capacity of conventional database systems. The value of big data is the ability to identify useful data and turn it into useable information by identifying patterns and deviations from patterns?.

Since publication over twenty years ago, The Translator's Invisibility has provoked debate and controversy within the field of translation and become a classic text. Providing a fascinating account of the history of translation from the

seventeenth century to the present day, Venuti shows how fluency prevailed over other translation strategies to shape the canon of foreign literatures in English and investigates the cultural consequences of the receptor values which were simultaneously inscribed and masked in foreign texts during this period. Reissued with a new introduction, in which the author provides a clear, detailed account of key concepts and arguments in order to issue a counterblast against simplistic interpretations, The Translator's Invisibility takes its well-deserved place as part of the Routledge Translation Classics series. This book is essential reading for students of translation studies at all levels.

This book represents the research efforts of individuals whose scientific expertise lies in reflection on what Sartre described as reflective acts. Theory in the cognitive psychology of mental imagery, endeavors not only being able to describe the contents and nature of mental imagery, but also being able to understand the underlying functional cognition. Psychologists need not solely rely on the techniques of introspection, and the last two decades have seen highly creative developments in techniques for eliciting behavioural data to be complemented by introspective reports. This level of sophistication has provided singular insights into the relationship between imagery and other consequential and universal aspects of human cognition: perception, memory, verbal processes and problem solving. The recognition that imagery, despite its ubiquitous nature, differs between individuals both in prevalence and in kind, and the dramatic rise in cognitive science has provided the additional potential for integrating our understanding of cognitive function with our understanding of neuroanatomy and of computer science. All of these relationships, developments and issues are dealt with in detail in this book, by some of the most distinguished authors in imagery

research, working at present in both Europe and the USA. Originally published: London: MacMillan and Co., 1863.
