"The main message emerging from this new comprehensive global assessment is that premature death and disease can be prevented through healthier environments--and to a significant degree. Analysing the latest data on the environment-disease nexus and the devastating impact of environmental hazards and risks on global health, backed up by expert opinion, this report covers more than 130 diseases and injuries. The analysis shows that 23% of global deaths (and 26% of deaths among children under five) are due to modifiable environmental factors--and therefore can be prevented. Stroke, ischaemic heart disease, diarrhoea and cancers head the list. People in low-income countries bear the greatest disease burden, with the exception of noncommunicable diseases. The report's unequivocal evidence should add impetus to coordinating global efforts to promote healthy environments--often through well-established, cost-effective interventions. This analysis will inform those who want to better understand the transformational spirit of the Sustainable Development Goals agreed by Heads of State in September 2015. The results of the analysis underscore the pressing importance of stronger intersectoral action to create healthier environments that will contribute to sustainably improving the lives of millions around the world."--Page 4 of cover.

This is the story of LSD told by a concerned yet hopeful father, organic chemist Albert Hofmann. He traces LSDs path from a promising psychiatric research medicine to a recreational drug sparking hysteria and prohibition. We follow Dr. Hofmanns trek across Mexico to discover sacred plants related to LSD, and listen in as he corresponds with other notable figures about his remarkable discovery. Underlying it all is Dr. Hofmanns powerful conclusion that mystical experience may be our planets best hope for survival. Whether induced by LSD, meditation, or arising spontaneously, such experiences help us to comprehend the wonder, the mystery of the divine in the microcosm of the atom, in the macrocosm of the spiral nebula, in the seeds of plants, in the body and soul of people. Now, more than sixty years after the birth of Albert Hofmanns problem child, his vision of its true potential is more relevant, and more needed, than ever.

For as long as she can remember, Maddie has seen a series of unique digits hovering above the foreheads of each person she encounters. Her earliest memories are marked by these numbers, but it takes her father's premature death for Maddie and her family to realize that these mysterious digits are actually deathdates, and just like birthdays, everyone has one. Forced by her alcoholic mother to use her ability to make extra money, Maddie identifies the quickly approaching deathdate of one client's young son, but because her ability only allows her to see the when and not the how, she's unable to offer any more insight. When the boy goes missing on that exact date, law enforcement turns to Maddie. Soon, Maddie is entangled in a homicide investigation, and more young people disappear and are later found murdered. A suspect for the investigation, a target for the murderer, and attracting the attentions of a mysterious young admirer who may be connected to it all, Maddie's whole existence is about to be turned upside down. From bestselling author Gabor Maté, the essential resource for understanding the roots and behaviors of addiction--now with an added introduction by the author. Based on Gabor Maté's two decades of experience as a medical doctor and his groundbreaking work with the severely addicted on Vancouver's skid row, *In the Realm of Hungry Ghosts* radically reenvision this much misunderstood field by taking a holistic approach. Dr. Maté presents addiction not as a discrete phenomenon confined to an unfortunate or weak-willed few, but as a continuum that runs throughout (and perhaps underpins) our society; not a medical "condition" distinct from the lives it affects, rather the result of a complex interplay among personal history, emotional, and neurological development, brain chemistry, and the drugs (and behaviors) of addiction. Simplifying a wide array of brain and addiction research findings from around the globe, the book avoids glib self-help remedies, instead promoting a thorough and compassionate self-understanding as the first key to healing and wellness. *In the Realm of Hungry Ghosts* argues persuasively against contemporary health, social, and criminal justice policies toward addiction and those impacted by it. The mix of personal stories—including the author's candid discussion of his own "high-status" addictive tendencies—and science with positive solutions

makes the book equally useful for lay readers and professionals.

Purity and Danger is acknowledged as a modern masterpiece of anthropology. It is widely cited in non-anthropological works and gave rise to a body of application, rebuttal and development within anthropology. In 1995 the book was included among the Times Literary Supplement's hundred most influential non-fiction works since WWII. Incorporating the philosophy of religion and science and a generally holistic approach to classification, Douglas demonstrates the relevance of anthropological enquiries to an audience outside her immediate academic circle. She offers an approach to understanding rules of purity by examining what is considered unclean in various cultures. She sheds light on the symbolism of what is considered clean and dirty in relation to order in secular and religious, modern and primitive life.

The Medusa Gaze offers striking insights into the desires and frustrations of women through the narratives of the impressive contemporary novelists Angela Carter, Toni Morrison, Sylvia Plath, Margaret Atwood, A.S. Byatt, Iris Murdoch, Jeanette Winterson, Jean Rhys and Michèle Roberts. It illuminates women's power and vulnerability as they construct their own egos in opposition to their hostile alter egos or others facing them in their mirrors, and fixes a panoptic gaze on the women stalking its pages, as they learn how to deflect the menacing gaze of others by returning their look defiantly back at them. Some stare back and win assurance; others are stared down, reduced to psychic trauma, madness and even suicide. The book shows how Freud's, Sartre's and Lacan's androcentric views define the Medusa m/other as monstrous, and how the efforts of mothers to nurture may be slighted as inadequate or devouring. It presents Medusa and other goddess figures as inspirational, repelling harm through the 'evil eye' of their powerful gaze. Conversely, it also shows women who are condemned as monstrous Gorgons, trapped in enmity, rivalry and rage. Representing English, American and African American, Canadian and Caribbean writing, the works explored here include realistic, social narrative and magical realist writings, in addition to tales of the past and dystopian narratives.

When first published, Marshall McLuhan's Understanding Media made history with its radical view of the effects of electronic communications upon man and life in the twentieth century.

In Victoria Laurie's latest Psychic Eye Mystery, Abby Cooper learns that following the money often leads to murder....

When Abby is sent to Los Angeles to help train FBI officers to use their intuition, she encounters a case that only she can solve: a series of bank robberies in which the thieves made off with loads of cash but left no clues. Abby's sixth sense leads her team to a tract of land recently cleared for development, where she gets a vision of four buried bodies.

However, a site search turns up only ancient bones and pottery from an American Indian tribe, which is enough to delay construction for years. With a furious developer and dubious FBI agents on her back, Abby is losing credibility fast. But Abby's talent rarely leads her astray, and if the bodies aren't there yet, that means four deaths can still be stopped.

She'll just have to dig a little deeper....

In this witty and perceptive debut, a former editor at Psychology Today shows us how magical thinking makes life worth living. Psychologists have documented a litany of cognitive biases- misperceptions of the world-and explained their positive functions. Now, Matthew Hutson shows us that even the most hardcore skeptic indulges in magical thinking all the time-and it's crucial to our survival. Drawing on evolution, cognitive science, and neuroscience, Hutson shows us that magical thinking has been so useful to us that it's hardwired into our brains. It encourages us to think that we actually have free will. It helps make us believe that we have an underlying purpose in the world. It can even protect us from the paralyzing awareness of our own mortality. In other words, magical thinking is a completely irrational way of making our lives make rational sense. With wonderfully entertaining stories, personal reflections, and sharp observations, Hutson reveals our deepest fears and longings. He also assures us that it is no accident his surname contains so many of the same letters as this imprint.

Abby Cooper's next mission may truly be impossible... Abby Cooper, the FBI's newest Civilian Profiler, is adding Spy to her resume. It's a major breach in security as every country's leader can be identified by their aura... Transhumanists would have humanity's creation of posthumanity be our governing aim. Susan B. Levin challenges their overarching commitments regarding the mind, brain, ethics, liberal democracy, knowledge, and reality. Her critique unmasks their notion of humanity's self-transcendence via science and technology as pure, albeit seductive, fantasy.

Hired by a mob boss who wants to use her psychic talents to assist in some of his business matters, Abby Cooper finds herself working for both sides of the law when the police ask her to uncover the identity of a man who has been attacking

women.
