"Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books."—The Washington Post Book World (front page review) In Cosmos, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In Pale Blue Dot, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. "Takes readers far beyond Cosmos . . . Sagan sees humanity's future in the stars."—Chicago Tribune

This book explains how to monitor, test, and diagnose IPTV systems and services. Covered are the quantitative (packet loss, error rate) and qualitative (perceptual) quality measurement and control processes. Discover how quality of experience (QoE) can be very different than traditional quality of service (QoS) measurements. IPTV systems are

complex multimedia communication systems and communicating through them involves the use of multiple layers, which can make testing and diagnostics more difficult. Discover how different layers in an IPTV system can interact and why multilayer testing may be used to evaluate and diagnose operation and performance issues. Learn about audio, video, and MPEG formats and what parts of them can be measured in IPTV systems. Audio quality characteristics including fidelity, frequency response, and signal to noise ratio are described. Key video quality characteristics such as error blocks, aliasing effects, object retention, and artifacts are explained. Discover the different types of network measurements such as packet loss, gap loss, and jitter and how they influence quality of service (QoS). The types of content measurements such as frame loss rate (FLR), synchronization loss, and audiovisual synchronization offset are explained. Command and control measurements such as channel change time, encoder initialization time, and connect time are described. The fundamentals of full reference, partial reference, and zero reference quality processes such as MDI, MPQM, and V-Factor are explained. Other types of quality measures including video, audio, synchronization, interaction (control), and other measurable values are explained. The different types of testing including laboratory, acceptance, conformance, field, and diagnostic testing are described along with some of the common types of IPTV test equipment that are used. You will learn about the different types of network monitoring devices and probes that are used in IPTV systems, what they can do, and how to understand and analyze the information they provide to determine the operation and performance of the IPTV system. Find out about test client software and how it can be installed in devices such as set top boxes which can measure and report back performance information to a network monitoring system. Some of the key areas covered in this book include: .IPTV Testing Challenges .Testing Methods .Audio, Video, and MPEG Formats .Audio Quality .Video Quality .Network Measurements .Content Quality Measurements .Command and Control Metrics .MDI, MPQM, V-Factor Quality Rating .IPTV Test Equipment

A fascinating book on the joys of discovering how the world works, by the Pulitzer Prize-winning author of *Cosmos* and *Shadows of Forgotten Ancestors*. "Magnificent . . . Delightful . . . A masterpiece. A message of tremendous hope for humanity . . . While ever conscious that human folly can terminate man's march into the future, Sagan nonetheless paints for us a mind-boggling future: intelligent robots, the discovery of extraterrestrial life and its consequences, and above all the challenge and pursuit of the mystery of the universe."—Chicago Tribune "Go out and buy this book, because Carl Sagan is not only one of the world's most respected scientists, he's a great writer. . . . I can give a book no greater accolade than to say I'm planning on reading it again. And again. And again."—The Miami Herald "The brilliant astronomer . . . is persuasive, provocative and readable."—United Press International "Closely reasoned, impeccably researched, gently humorous, utterly devastating."—The Washington Post **NEW YORK TIMES BESTSELLER** • In the final book of his astonishing career, Carl Sagan brilliantly examines the burning questions of our lives, our world, and the universe around us. These luminous, entertaining essays travel both the vastness of the cosmos and the intimacy of the human mind, posing such fascinating questions as how did the universe originate and how will it end, and how can we meld science and compassion to meet the challenges of the coming century? Here, too, is a rare, private glimpse of Sagan's thoughts about love, death, and God as he struggled with fatal disease. Ever forward-looking and vibrant with the sparkle of his unquenchable curiosity, *Billions & Billions* is a testament to one of the great scientific minds of our day. Praise for *Billions & Billions* "[Sagan's] writing brims with optimism, clarity and compassion."—Ft. Lauderdale Sun-Sentinel "Sagan used the spotlight of his fame to illuminate the abyss into which stupidity, greed, and the lust for power may yet dump us. All of those interests and causes are handsomely represented in *Billions & Billions*."—The Washington Post Book World "Astronomer Carl Sagan didn't live to see the millennium, but he probably has done more than any other popular scientist to prepare us for its arrival."—Atlanta Journal & Constitution "Billions & Billions can be interpreted as the Silent Spring for the current generation. . . . Human history includes a number of leaders with great minds who gave us theories about our universe and origins that ran contrary to religious dogma. Galileo determined that the Earth revolved around the Sun, not the other way around. Darwin challenged Creationism with his *Evolution of Species*. And now, Sagan has given the world its latest challenge: *Billions & Billions*."—San Antonio Express-News "[Sagan's] inspiration and boundless curiosity live on in the gift of his work."—Seattle Times & Post-Intelligencer "Couldn't stay awake in your high school science classes? This book can help fill in the holes. Acclaimed scientist Carl Sagan combines his logic and knowledge with wit and humor to make a potentially dry subject enjoyable to read."—The Dallas Morning News

From archiving data to CD-ROMs, and from coding theory to image analysis, many facets of computing make use of data compression in one form or another. This is an overview of the many different types of compression, including a taxonomy, an analysis of the most common systems of compression, discussion of their relative benefits and disadvantages, and their most common uses. Readers are presupposed to have a basic understanding of computer science -- essentially the storage of data in bytes and bits and computing terminology -- but otherwise this book is self-contained. It divides neatly into four main parts based on the main branches of data compression: run length encoding, statistical methods, dictionary-based methods, and lossy image compression. All of the most well-known compression techniques are covered including Zip, BinHex, Huffman coding, and GIF.

It brings us into direct, active contact with boundless creative energies that we may not even know we had.

Chapter 1 It is a truth universally acknowledged, that a single man in possession of a good fortune, must be in want of a wife. However little known the feelings or views of such a man may be on his first entering a neighbourhood, this truth is so well fixed in the minds of the surrounding families, that he is considered as the rightful property of some one or other of their daughters. "My dear Mr. Bennet," said his lady to him one day, "have you heard that Netherfield Park is let at last?" Mr. Bennet replied that he had not. "But it is," returned she; "for Mrs. Long has just been here, and she told me all about it." Mr. Bennet made no answer. "Do not you want to know who has taken it?" cried his wife impatiently. "You want to tell me, and I have no objection to hearing it." This was invitation enough. "Why, my dear, you must know, Mrs. Long says that Netherfield is taken by a young man of large fortune from the north of England; that he came down on Monday in a chaise and four to see the place, and was so much delighted with it that he agreed with Mr. Morris immediately; that he is to take possession before Michaelmas, and some of his servants are to be in the house by the end of next week."

==== Chapter 45 Convinced as Elizabeth now was that Miss Bingley's dislike of her had originated in jealousy, she could not help feeling how unwelcome her appearance at Pemberley must be to her, and was curious to know with how much civility on that lady's side the acquaintance would now be renewed. On reaching the house, they were shown through the hall into the saloon, whose northern aspect rendered it delightful for summer. Its windows opening to the ground, admitted a most refreshing view of the high woody hills behind the house, and of the beautiful oaks and Spanish chestnuts which were scattered over the intermediate lawn. In this house they were received by Miss Darcy, who was sitting there with Mrs. Hurst and Miss Bingley, and the lady with whom she lived in London. Georgiana's reception of them was very civil, but attended with all the embarrassment which, though proceeding from shyness and the fear of doing wrong, would easily give to those who felt themselves inferior the belief of her being proud and reserved. Mrs. Gardiner and her niece, however, did her justice, and pitied her.

This short work is written with clarity and vigour. It carefully distinguished some kinds of charismatically-inclined Christians from others. It poses questions with which every Church member is faced. Chantry's answers tally with those of the greatest leaders of the Church during the Christian centuries. From Psalm 85 he outlines the true character of revival, and closes the book with material drawn from the Great Awakening of the 18th century.

A prescient warning of a future we now inhabit, where fake news stories and Internet conspiracy theories play to a disaffected American populace "A glorious book . . . A spirited defense of science . . . From the first page to the last, this book is a manifesto for clear thought."—Los Angeles Times How can we make intelligent decisions about our increasingly technology-driven lives if we don't understand the difference between the myths of pseudoscience and the testable hypotheses of science? Pulitzer Prize-winning author and distinguished astronomer Carl Sagan argues that scientific thinking is critical not only to the pursuit of truth but to the very well-being of our democratic institutions. Casting a wide net through history and culture, Sagan examines and authoritatively debunks such celebrated fallacies of the past as witchcraft, faith healing, demons, and UFOs. And yet, disturbingly, in today's so-called information age, pseudoscience is burgeoning with stories of alien abduction, channeling past lives, and communal hallucinations commanding growing attention and respect. As Sagan demonstrates with lucid eloquence, the siren song of unreason is not just a cultural wrong turn but a dangerous plunge into darkness that threatens our most basic freedoms. Praise for *The Demon-Haunted World* "Powerful . . . A stirring defense of informed rationality. . . Rich in surprising information and beautiful writing."—The Washington Post Book World "Compelling."—USA Today "A clear vision of what good science means and why it makes a difference. . . . A testimonial to the power of science and a warning of the dangers of unrestrained credulity."—The Sciences "Passionate."—San Francisco Examiner-Chronicle
