Language Arts: Integrating Skills for Classroom Teaching provides a clear and succinct introduction to teaching the language arts to elementary students, focusing on integrating the six language arts with other subject areas. This practical, hands-on text adroitly incorporates the IRA/NCTE Standards and provides guidance on differentiating instruction to bring out the best in the rapidly growing numbers of students with special needs English Language Learners in the regular classroom.

For administrators and others involved in the transition to block schedules, this book provides answers to the complex and challenging questions raised by the curious and the skeptical. It demonstrates how to overcome obstacles to systemic school improvements.

This newly updated edition provides a solid introduction to curriculum development in gifted and talented education. Written by experts in the field of gifted education, this text uses cutting-edge curriculum design techniques and aligns the core content with national and state standards. In addition to a revision of the original chapters, the second edition contains new chapters on topics such as second language learning, leadership, arts curriculum, and technology. The text identifies the basic principles of curriculum development : accelerated learning within the core content areas, use of higher order process skills, development of creative student products, and concept development and learning. These techniques are incorporated into a chapter on each core content area : language arts, mathematics, science, and social studies, as well as world languages and the arts. The final chapters focus on the roles of teachers, program coordinators, and administrators during curriculum design, including selecting resources and materials, aligning curriculum, and assessing student learning. --from back cover.

This book explores teaching and learning in lower secondary classrooms in the three PISA domains science, mathematics and reading. Based on extensive video documentation from science, math and reading classrooms in Norwegian secondary schooling, it analyzes how offered and experienced teaching and learning opportunities in these three subject areas support students' learning. The in-depth investigations of video documentation are combined with analysis of the Norwegian PISA results in order to understand how teaching and learning in science, mathematics and reading can be improved. Recent reviews indicate that instructional practice does make a difference to students learning - and is more important than other factors including students' socioeconomic background, class size, classroom climate, and teachers' experience and formal training. This book opens the discussion on a European basis about contemporary challenges in teaching and learning in secondary schooling. Norway as a test bed is particularly interesting due to its long tradition with national curricula, and its unitary and non-streamed structure. Furthermore, ideas of educational progressivism and students' active ways of working (such as individualized teaching, adapted teaching, inquiry based teaching etc.) have for a long time been actively promoted within Norwegian educational policies. The book draws on analyses that combine expertise in psychometrics and video-based micro genetic classroom studies with expertise in domain-specific instruction (math, science and reading). It feeds the conversation how issues of communication patterns are dealt with and made productive within different instructional formats, and presents possibilities to compare and analyze instructional formats and discursive practices for students' learning.?

The PRAXIS English Language Arts test is deeply rooted in literacy development, comprehension, assessment, and writing concepts. This study guide provides a detailed explanation for each and every competency on the test. You will have the ability to review close to 100 pages of detailed content for each section before testing your knowledge on the practice test.
