The order of the Knights Templar, which existed for about two centuries in the Middle Ages, was created after the First Crusade of 1096 to ensure the safety of European pilgrims to Jerusalem after its conquest. Officially endorsed by the Catholic church in 1129, the order became a favoured charity across Europe, and grew rapidly in membership and power. Templar knights, easily recognisable in their white mantle with a distinct red cross, were some of the best equipped, trained, and disciplined fighting units of the Crusades. When the Holy Land was lost and the Templars suffered crushing defeats, support for the Order faded. Rumours about the Templars' secret initiation ceremony created mistrust, and King Philip IV of France, on 13 October 1307 had many of the order's members in France arrested, tortured into 'confession' and burned at the stake. 1312, Pope Clement, under continuing pressure from Philip, forcibly disbanded the order. The sudden disappearance of a major part of the European infrastructure gave rise to speculation and legends, which have kept the name 'Templar' alive. This book brings the story into logical focus.

This volume looks into the ways in which film has contaminated and re-shaped culture(s) and the collective unconscious, at both local and global levels, arguing that our lives have been impacted by the 'then' that we keep revisiting, lest we forget. It takes the reader from the Berlin Wall to China, and from the terror of communist political prisons and labour camps to the rosy image promoted by propaganda. A key point throughout the text is its interdisciplinary nature, as it brings together literature and film scholars, directors, sociologists and philosophers, whose overall conclusion is that communism, lingering in mentalities, still needs interrogation. Structured along four parts which trace a Homeric (or rather Joycean) journey to a home metonymised by the long-awaited freedom, this book sets out from the gloomiest aspects of totalitarianism in the Romanian, Serbian and Soviet 'Hades(es)' of traumatic psychological and physical experiences and of imposed silencing. The second part gathers together case studies of films illustrating more optimistic views of communism as 'spring' (in the USSR) or as a 'golden age' (in Romania), thus narcotising the communist 'subjects' and preventing them from seeing the actual inferno. The third section offers filmic accounts of the aftermaths of communism, engaging the readers in a

nostalgic process that revisits, questions, reflects on and remembers communism on a larger, world stage. The coda rounds up the volume (and the journey therein) by crossing genre frontiers to written narratives with a cinematic component.

Richly illustrated with full-color images, this book is a comprehensive, up-to-date description of the planets, their moons, and recent exoplanet discoveries. This second edition of a now classic reference is brought up to date with fascinating new discoveries from 12 recent Solar System missions. Examples include water on the Moon, volcanism on Mercury's previously unseen half, vast buried glaciers on Mars, geysers on Saturn's moon Enceladus, lakes of hydrocarbons on Titan, encounter with asteroid Itokawa, and sample return from comet Wild 2. The book is further enhanced by hundreds of striking new images of the planets and moons. Written at an introductory level appropriate for undergraduate and high-school students, it provides fresh insights that appeal to anyone with an interest in planetary science. A website hosted by the author contains all the images in the book with an overview of their importance. A link to this can be found at www.cambridge.org/solarsystem. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 16.0px Times; color: #ffffff} For George Chapman (1559-1634) his translation of Homer was 'the work that I was born to do'. The publication of his Iliad and Odyssey together in 1616 was a landmark in English literature, but until now there has been no edition which modernises his spelling

and punctuation and also provides detailed help in grasping his often obscure language, and in understanding how and why he translated Homer in the particular way he did. This edition of the *Odyssey*, a companion to Robert Miola's edition of the *Iliad*, aims to bring Chapman's rendering alive for the modern reader. Its literary, philosophical, and religious context is explained in an Introduction and in footnotes, and side- and end-glosses clarify Chapman's English. His *Odyssey* is not only a stylistic masterpiece of seventeenth-century English: it constitutes a profound and moving interpretation – still relevant after four hundred years – of Homer's story of the suffering and grace implicit in the human condition. Through its teeming diversity of events, settings, and characters Homer and his first English translator explore the question of what it means to be human in a complex and threatening world.

From its beginnings in the works of H.G. Wells and Jules Verne to the virtual worlds of William Gibson's *Neuromancer* and *The Matrix*, *Science Fiction: A Guide to the Perplexed* helps students navigate the often perplexing worlds of a perennially popular genre. Drawing on literature as well as example from film and television, the book explores the different answers that criticism has offered to the vexed question, 'what is science fiction?' Each chapter of the book includes case studies of key texts, annotated guides to further reading and suggestions for class discussion to help students master the full range of contemporary critical approaches to the field, including the scientific, technological and political contexts in which the genre has flourished. Ranging from an understanding of the genre through the stereotypes of 1930s

As a digital edition, this two-volume anthology offers not only a handy historical overview of taijiquan history, but most chapters focus on actual practice. Guidance is provided through Carol Derrickson's discussions on taijiquan classic writings as well as from other highly experienced instructors in their own chapters. Dr. Linda Lehrhaupt's chapter inspires one to practice by explaining how mental changes occur in a student during initial weeks of classes. Although most taiji classes are offered by individuals in their own schools, a number of classes are also offered in academic settings. Andrew Peck gives a fine example of how taiji is taught in a university setting. Other authors present subtle aspects of practice—be it eye movement, circles that exist even in movements that appear to be linear, benefits derived from solo and group practice, or the too often elusive element of relaxation. All these chapters will prove valuable to anyone wishing to improve their quality of practice and thus to reap more health benefits taiji has to offer. The same embodied principles can be utilized in martial applications. Peter Lim wrote two chapters. In one he details general taiji principles that are put into the practice, while in the other chapter he looks specifically at how the principles can be applied in combat. His chapters provide a solid foundation for better understanding tuishou, the two-person push-hands practice that Herman Kaus and Hal Mosher (with the help of Allen Pittman) discuss. Greg Wolfson (with the help of Scott Rodell) writes about push-hands and sanshou—a high-level two-person practice of combative training. Russ Mason's short but pertinent chapter samples two favorite techniques: wardoff and diagonal flying. The chapters by Donald Mainfort

and Joel Stein are relatively unique in that they look at the variety of taiji forms—contrasting the original Chen Style with the Yang Style, and the large and medium frames—helping us better understand how and why routines differ, and which may be better suited for particular individuals. As a result, we can also see why movements from different styles can blend into anyone’s practice. Comprised of articles previously published in the Journal of Asian Martial Arts—we are highly optimistic that you will find something on each page of this anthology to be of great use in your understanding and practice.

Part of the premise of the online discussion transcribed in this book is how Gerry Anderson’s television series *Space: 1999* can be understood in relation to Stanley Kubrick’s *2001: A Space Odyssey* by looking at both narratives through the perspective of systems theory. As a result of doing so, an engaged debate concerned with the political and philosophical subtext of both stories developed. This book gives a full account of the debate with summaries of ideas and insights. The book has been developed on an idealistic basis. It is sold at the lowest price the publisher was willing to accept. A free e-book version can be downloaded at www.lulu.com.
