En una noche serena, un rayo de luna entra por la ventana. La niña despierta. Desde el balcón ve la luna llena. Es algo sorprendente. Desde entonces la luna llena la acompañará en el recorrido de la órbita de su vida. Con un instinto que la mueve, con un sexto sentido heredado de siglos atrás, se sentirá atraída por la luna. Sin embargo, la atracción es mutua: la niña y la luna. Este libro, en su mayor parte biográfico, fue escrito en noches de luna llena, ya que la autora asegura que desde chiquita no puede dormir en estas noches, y así nace "Noches de Luna Llena." It is a quiet night. A glint of light enters through the window. The little girl awakes. From the balcony she watches the full moon. It is something amazing for her. The moon will always accompany her as she lives her life. She will be attracted by the moon instinctually, a psychic gift that she inherit centuries ago. Most of this book is autobiographical. It was written during nights of the full moon. The author says that since she was a little girl, she couldn't sleep during these nights, and this is how Nights of the Full Moon was born.

This is a work that should be read carefully by students of Spanish colonization. Seldom in recent years has a work of primary sources been as important as this been given to the public.

The problem with secrets is that they're too easy to keep collecting. Luna Allen has done some things she would rather no one ever know about. She also knows that, if she could go back in time, she wouldn't change a single thing. With three sisters she loves, a job she (mostly) adores, and a family built up of friends she's made over the years, Luna figures everything has worked out the way it was supposed to. But when one of those secrets involves the man who signs her paycheck, she can't find it in her to regret it. Despite the fact that he's not the friendliest man in the world. Or the most patient. Sometimes there are things you're better off keeping to yourself.-----#1 Overall Amazon Kindle Best Seller  
EL REGRESO A COATLICUE

Princess Luna, the guardian of the night, peacefully rules over Equestria alongside her big sister. When the Cutie Mark Crusaders suggest she should have a holiday as equally prestigious as Celestia's Summer Sun Celebration, she declines. Luna isn't comfortable with such attention--especially after all the terror she caused as Nightmare Moon. So when she realizes Celestia is orchestrating a surprise festival in her honor, she decides to have some fun and take matters into her own hooves. What's a princess of darkness to do? ©2015 Hasbro. After the sun insults her, the moon gets very upset and disappears, but with the help of her friends, the moon gains more self-confidence each day until she is back to her full size. Includes facts about the moon's phases and related activities.

Every organism on Earth responds to four major cycles: the solar and lunar day, the synodic month and the year. We all dance to these primary rhythms. This book reveals the poetic cosmology that lies within the cycles of the Sun and Moon as seen from the Earth.

The recession in the traditional heavy industries along with the development of advanced technologies in all the industrial countries has meant that the impact of heterogeneous catalysis in the synthesis of fine chemicals is becoming increasingly noticeable. The second International Symposium on Heterogeneous Catalysis and Fine Chemicals is to be seen in this perspective. Organised by the Laboratory of Catalysis in Organic Chemistry of the University of Poitiers within the framework of the International Symposia of the 'Centre National de la Recherche Scientifique' (CNRS), the symposium provided an opportunity for contact between academic researchers and manufacturers, users (or potential users) of solid catalysts for fine chemical synthesis. The book gives an overall view of the problems encountered by academic and industrial researchers. A large variety of reactions are described, the emphasis being on selectivity: chemo-, regio-, stereoselectivity (even enantioselectivity) and on the change of these selectivities as a function of the characteristics of the surface sites (nature, distribution, etc.). The three themes of the symposium, hydrogenation, oxidation and acid-base catalysis were introduced in four plenary lectures and two invited communications, maintaining a balance between the industrial and the academic points of view. Some 60 research papers selected by the Scientific Committee were presented. All are reproduced in full in this proceedings volume.
