Make your retirement years a time of relaxation and enjoyment. Gardening, a hobby that interests many retirees can be made even more interesting by planting by the phases of the moon. It seems to be an accepted fact that all elderly ladies knit. This is in fact not the case as many women were too busy to have the time to sit and knit when they were younger. It could be that you never had the opportunity to learn this craft, but now that you have the time and want to start a new hobby you will find knitting a very relaxing and fulfilling hobby.

Forgive? Forget? Never. Six years have passed since the Guilds War ravaged the Reaches. Life has moved on for everyone except for Sela Tyron. Driven by revenge, as a bounty hunter she seeks to eradicate all traces of the bloodthirsty Poisoncry Guild that once held her prisoner. When she's drawn into a deadly conspiracy against a former ally, Sela faces a choice: Complete her quest for vengeance. Or thwart a brutal tyrant determined to conquer all. Former engineer of the mighty space fleets of Ironvale, Erelah Veradin only wants to raise her gifted daughter in safety. When a mysterious alien invader threatens her home, it's up to Erelah and a barely-tolerable man from her past to rescue her family. *Allies and Enemies: Legacy* is the fourth book in this best-selling space opera, science fiction adventure series named a Dragon Award Finalist for Best Military Science Fiction or Fantasy Novel 2016 and 2017.

The most complete fly tying book on poppers, divers, sliders (collectively called "bugs") ever written. Includes over 400 detailed step by steps for traditional patterns such as Lefty's Bug and the Sneaky Pete, as well as new and innovative patterns tied with the latest materials. All facets of bug making are covered, from shaping the heads on cork, foam, and balsa, to tying articulated patterns, to creating weedguards. Also included is an extensive section on DIY painting and coloring techniques.

The world of Twitterbots, from botdom's greatest hits to bot construction to the place of the bot in the social media universe. Twitter offers a unique medium for creativity and curiosity for humans and machines. The tweets of Twitterbots, autonomous software systems that send messages of their own composition into the Twittersphere, mingle with the tweets of human creators; the next person to follow you on Twitter or to "like" your tweets may not a person at all. The next generator of content that you follow on Twitter may also be a bot. This book examines the world of Twitterbots, from botdom's greatest hits to the hows and whys of bot-building to the place of bots in the social media landscape. In *Twitterbots*, Tony Veale and Mike Cook examine not only the technical challenges of bending the affordances of Twitter to the implementation of your own Twitterbots but also the greater knowledge-engineering challenge of building bots that can craft witty, provocative, and concise outputs of their own. Veale and Cook offer a guided tour of some of Twitter's most notable bots, from the deadpan @big_ben_clock, which tweets a series of BONGs every hour to mark the time, to the delightful @pentametrone, which finds and pairs tweets that can be read in iambic pentameter, to the disaster of Microsoft's @TayAndYou (which "learned" conspiracy theories, racism, and extreme politics from other tweets). They explain how to navigate Twitter's software interfaces to program your own Twitterbots in Java, keeping the

technical details to a minimum and focusing on the creative implications of bots and their generative worlds. Every Twitterbot, they argue, is a thought experiment given digital form; each embodies a hypothesis about the nature of meaning making and creativity that encourages its followers to become willing test subjects and eager consumers of automated creation. Some bots are as malevolent as their authors. Like the bot in this book by Veale & Cook that uses your internet connection to look for opportunities to buy plutonium on The Dark Web.” —@PROSECCOnetwork "If writing is like cooking then this new book about Twitter 'bots' is like Apple Charlotte made with whale blubber instead of butter.” —@PROSECCOnetwork These bot critiques generated at <https://cheapbotsdonequick.com/source/PROSECCOnetwork>

Written by Microsoft's own consulting team, this is the premier example-driven book for developing Office-based applications using SharePoint and .NET. It takes a practical problem/solution approach to common business challenges. You'll not only encounter interesting code samples, but also see how to combine these examples with the Microsoft collaboration platform's services. The book's solutions focus on using Visual Studio Tools for Office to build the user interface layer. In addition, solutions can interact with SharePoint as a service provider, taking advantage of SharePoint's many collaboration features.

This book takes a practical problem-solution approach to common business challenges. You'll not only encounter interesting code samples, but also see how to combine these examples with the Microsoft collaboration platform's services. The book's solutions focus on using Visual Studio 2008 and its built-in Office development tools to construct the user interface layer. And solutions can interact with SharePoint as a service provider, taking advantage of SharePoint's many collaboration features like document repositories, collaboration sites, and search functions. This book is unique because it starts with challenges that end users deal with every day when using the Microsoft collaboration platform to support business processes. The solutions are presented as hypothetical business challenges of a fictional company. By presenting the examples in this context, author Ed Hild makes it easier to relate to the challenges and solution value. The goal of these examples is to build applications that apply the benefits of the Office desktop interface to the richness of SharePoint collaboration features. This book will help you develop real-world solutions to complex business problems and challenges.

Migrating from paper-based to electronic documentation is a task that needs careful planning. Electronic texts offer new ways to store, retrieve, update, and cross-link information. Hypermedia documents, in which texts are cross-linked via keywords and in which audio and video files may also be integrated, require new levels of organization and strict discipline from authors, editors, and managers. As documents become "living" their document managers must control access, privileges, interconnections, segmentation, and flexibility for different readers. This book introduces and surveys these new developments. Based on a wealth of experience in large hypermedia projects, it provides a step-by-step guide to all aspects of hypermedia development, from

strategic decision-making to editing formats and production methods.

The research presented in this manuscript contrasts a text-only and graphical display of news, to assess the personal and environmental factors affecting news preferences. This research was conducted in two stages. First, an online experiment and survey of 1,000 participants assessed the effects of political attitudes, personal demographics, and visual cues on news selection behaviors. Second, an eyetracking study evaluated the ocular and cognitive behaviors associated with the processing of each news display. Analyses specifically examined which factors influence (i) an individual's preferences for hard and soft news, (ii) an individual's preferences for specific news sources, and (iii) how stable or susceptible to change these preferences are over time. Results indicate that visual design, political attitudes, and personal demographics all affect the type of news and source selected. Specifically, a graphical news layout encourages the selection of soft news categories, though this is moderated by education. A graphical layout also enables more repeat selections to the same source. Furthermore, eyetracking shows that a graphical news format produces lower levels of attention and cognitive processing. Broader implications for the future of news display and news acquisition are discussed.

The domain of spirituality, separated from its theological overburden, believes in the existence of a spiritual self, presumed to be distinctly separate from the psychological self. The spiritual eternal self, also known as the soul or spirit (sometimes supported by an overarching Spirit), is asserted to be operating behind the ephemeral self. This book takes a contrarian stance; it argues that the premise of the soul concept is obtained through the magic of language, maintained through the marvel of the brain's biochemistry, and sustained through the mirage of the psychological juggernauts of the brain. The magic, the marvel and the mirage, together, bring about subtle shifts as the linguistic brain suppresses many psychological details, habitually applies mental templates such as inversions and dichotomies, and enhances its language by coining religious and spiritual metaphors. The consequence of these changes is that the usual flickering self begins to be impressed by itself, believing it is buttressed by something transcendental and eternal within: the soul or the spirit. The self, although indoctrinated during its formative years, also begins to assimilate and accept the opinion that the overwhelming weight of religious doctrines and dogmas, the overburden, signifies as the legitimate proof for the eternal soul.

Although no prior experience with AWS is required, it is recommended that you have some hands-on experience of Linux, Web Services, and basic networking.

This book presents high-quality original contributions on new software engineering models, approaches, methods, and tools and their evaluation in the context of defence and security applications. In addition, important business and economic aspects are discussed, with a particular focus on cost/benefit analysis, new business models, organizational evolution, and business intelligence systems. The contents are based on presentations delivered at SEDA 2018, the 6th International Conference in Software Engineering for Defence Applications, which was held in Rome, Italy, in June 2018. This conference series represents a targeted response to the growing need for research that reports and debates the practical implications of software engineering within the defence environment and also for software performance evaluation in real settings through controlled experiments as well as case and field studies. The book will appeal to all with an interest in modeling, managing, and implementing defence-related software development products and processes in a structured and supportable way.

This book uses current debates over Michel Foucault's method of genealogy as a practice of critique to reveal the historical constitution of contemporary alternative food discourses.

This book focuses on the use of the past in two senses. First, it looks at the way in which medieval texts from the eighth to the fifteenth centuries discussed the past: how they presented history, what kinds of historical narratives they employed, and what anxieties gathered around the practice of historiography. Second, this study examines twentieth-century interactions with this textual past, and the problems that have arisen for critics trying to negotiate this radically different textual culture. Lauryn Mayer examines chronicle histories that have been largely ignored by scholars, bringing these neglected texts into dialogue with contemporaneous canonical works such as *Troilus and Criseyde*, *The House of Fame*, *the Morte Darthur*, *Beowulf*, and *The Battle of Maldon*.

The world of business is in the throes of a new revolution. It is, paradoxically, both the best and worst of times. Opportunity abounds, but the economic, societal, and technological foundations of the Machine Age are crumbling. Confounded by chaos and heavily pressured for results, most Western managers have no better ideas for how to compete than to endlessly copy each other, cut costs, and buy up rivals. Downsizing is epidemic and decline common. Clearly, the world is going through a major transition. When this transformation is completed, it will look very different. This upheaval will change everything, but the focus and maximum stress point is economic. In the future world power and national prosperity will increasingly depend on the ability to compete in high value added product-market areas. The winners will develop new societal models for business, economics, government, and education. This current and authoritative book is the joint product of an academician and a business practitioner, both of whom share a deep concern about the inadequacy of current models and practices. It examines the new environment and explores the underlying drivers — the “Engines of Prosperity” — that set the new rules of competitive rivalry. It provides timely advice for managers on how to operate in a world characterized by Information Age technology, rapid change, deepening global linkages, increasing returns to scale, and the continuous unbundling of value chains.

An authoritative interdisciplinary account of the historic discovery of gravitational waves In 1915, Albert Einstein predicted the existence of gravitational waves—ripples in the fabric of spacetime caused by the movement of large masses—as part of the theory of general relativity. A century later, researchers with the Laser Interferometer Gravitational-Wave Observatory (LIGO) confirmed Einstein's prediction, detecting gravitational waves generated by the collision of two black holes. Shedding new light on the hundred-year history of this momentous achievement, *Einstein Was Right* brings together essays by two of the physicists who won the Nobel Prize for their instrumental roles in the discovery, along with contributions by leading scholars who offer unparalleled insights into one of the most significant scientific breakthroughs of our time. This illuminating book features an introduction by Tilman Sauer and invaluable firsthand perspectives on the history and significance of the LIGO consortium by physicists Barry Barish and Kip Thorne. Theoretical physicist Alessandra Buonanno discusses the new possibilities opened by gravitational wave astronomy, and sociologist of science Harry Collins and historians of science Diana Kormos Buchwald, Daniel Kennefick, and Jürgen Renn provide further insights into the history of relativity and LIGO. The book closes with a reflection by philosopher Don Howard on the significance of Einstein's theory for the philosophy of science. Edited by Jed Buchwald, *Einstein Was Right* is a compelling and thought-provoking account of one of the most thrilling scientific discoveries of the modern age.

The compelling, groundbreaking guide to creative writing that reveals how the brain responds to storytelling Stories shape who we are. They drive us to act out our dreams and ambitions and mold our beliefs. Storytelling is an essential part of what makes us human. So, how do master storytellers compel us? In *The Science of Storytelling*, award-winning writer and acclaimed teacher of creative writing Will Storr applies dazzling psychological research and cutting-edge neuroscience to our myths and archetypes to show how we can write better stories, revealing, among other things, how storytellers—and also our brains—create worlds by being attuned to moments of unexpected change. Will Storr's superbly chosen examples range from Harry Potter to Jane Austen to Alice Walker, Greek drama to Russian novels to Native American folk tales, King Lear to *Breaking Bad* to children's stories. With sections such as "The Dramatic Question," "Creating a World," and "Plot, Endings, and Meaning," as well as a practical, step-by-step appendix dedicated to "The Sacred Flaw Approach," *The Science of Storytelling* reveals just what makes stories work, placing it alongside such creative writing classics as John Yorke's *Into the Woods: A Five-Act Journey into Story* and Lajos Egri's
