The U.S. government supports programs to combat global HIV/AIDS through an initiative that is known as the President's Emergency Plan for AIDS Relief (PEPFAR). This initiative was originally authorized in the U.S. Leadership Against HIV/AIDS, Tuberculosis, and Malaria Act of 2003 and focused on an emergency response to the HIV/AIDS pandemic to deliver lifesaving care and treatment in low- and middle-income countries (LMICs) with the highest burdens of disease. It was subsequently reauthorized in the Tom Lantos and Henry J. Hyde U.S. Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008 (the Lantos-Hyde Act). Evaluation of PEPFAR makes recommendations for improving the U.S. government's bilateral programs as part of the U.S. response to global HIV/AIDS. The overall aim of this evaluation is a forward-looking approach to track and anticipate the

evolution of the U.S. response to global HIV to be positioned to inform the ability of the U.S. government to address key issues under consideration at the time of the report release.

With cases reflecting the classic presentation format of each disease process, this book prepares students for patient encounters during their oral and maxillofacial surgery rotations. It also helps residents learn and review "high yield" material that is commonly found in oral and maxillofacial training and on board examinations. It highlights clinical information that is commonly asked during rounds, in the operating room, and during examinations. For each case, it includes an overview of the most common clinical presentation, physical exam findings, diagnostic tools, complications, treatment, and a discussion of any controversial issues that may surround the case. The authors describe *Clinical Review of Oral and Maxillofacial Surgery* as "A little reach for the dental student, right on target for the OMS resident, and a strong refresher for OMS board certification." This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Case-based format prepares students and residents to pass the OMSSAT, with the Table of Contents corresponding to the exam's categories and questions. 95 clinical cases focus on essential information regarding each disease process. Detailed illustrations -- including radiographs and clinical photographs or drawings -- provide a visual guide to conditions, techniques, diagnoses, and key concepts. Contributing authors include recent graduates or senior residents in oral and maxillofacial surgery, so they are fully cognizant of students' and residents' needs as they prepare for cases, exams, and surgical procedures. Complements other Elsevier books such as Peterson: *Contemporary Oral and Maxillofacial Surgery*, Fonseca: *Oral and Maxillofacial Surgery*, and Ward Booth: *Maxillofacial Surgery*.

This book serves as a reference work on pediatric HIV infection and covers the full bandwidth of topics from an introduction to pathogenesis and epidemiology, over the transmission of the HI virus, to clinical manifestations, treatment, and prevention strategies. Diseases and disorders occurring in HIV infected persons are discussed in detail. The book covers special populations, such as neonates born to an HIV positive mother and adolescents and examines the specific ways of managing HIV disease in these patient groups. This is the first book to cover palliative care as well as ethical, legal and social issues of HIV infection.

In the second wave of the HIV epidemic, those with the disease are more likely than ever to be female, younger, heterosexual, a racial minority, and rural-living. Vital to the development of user-friendly health care systems is an understanding of the vastly different lives of this second wave of HIV-infected persons. "You're the First One I've Told" offers a view into the lives of men and women infected with HIV. The experiences of twenty-five people living with this disease in rural eastern North Carolina serve as the foundation of this book, which also draws upon unique HIV/AIDS survey data collected by the authors and statistics from the Southeastern United States. This combination of qualitative and quantitative information provides readers with a vivid description of how people live with HIV/AIDS in the midst of their often traumatic lives, and why they manage their illness in ways that seem to contradict mainstream medical and social wisdom. The people interviewed represent a variety of races, genders, professions, family lives, and medical and social service access and utilization. This book is the first

to address a history of racism, distrust of formalized medical systems, homophobia, trauma and their interplay with HIV treatment, particularly in the South. It is an indispensable read for students needing to understand health care for the disenfranchised, as well as any provider, policymaker, or researcher involved in HIV service provision.

Revised and Updated, Featuring a New Case Study How do successful companies create products people can't put down? Why do some products capture widespread attention while others flop? What makes us engage with certain products out of sheer habit? Is there a pattern underlying how technologies hook us? Nir Eyal answers these questions (and many more) by explaining the Hook Model—a four-step process embedded into the products of many successful companies to subtly encourage customer behavior. Through consecutive “hook cycles,” these products reach their ultimate goal of bringing users back again and again without depending on costly advertising or aggressive messaging. Hooked is based on Eyal's years of research, consulting, and practical experience. He wrote the book he wished had been available to him as a start-up founder—not abstract theory, but a how-to guide for building better products. Hooked is written for product managers, designers, marketers, start-up founders, and anyone who seeks to understand how products influence our behavior. Eyal provides readers with:

- Practical insights to create user habits that stick.
- Actionable steps for building products people love.
- Fascinating examples from the iPhone to Twitter, Pinterest to the Bible App, and many other habit-forming products.

A comprehensive guide for primary care physicians, covering such clinical issues as screening, management and referrals. The needs of special populations are discussed, including the elderly, pregnant women, lesbians and immigrant populations. The book concludes with a series of clinical vignettes that describe in detail some hypothetical physician-patient interactions, and demonstrate ways that a practitioner can intervene in the recognition and

management of patients who could be at risk from violence in these various settings. The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus qualify for disability benefits. In this report, the Institute of Medicine (IOM) makes several recommendations for improving SSA's capacity for determining disability benefits more accurately and quickly using the HIV Infection Listings.

This unique book covers many major disease surveillance systems, drawing on the experiences of leading experts from around the world. Beginning with an overview of the newly revised International Health Regulations from the World Health Organization, the book progresses to explore surveillance systems currently in practice. Examples included are as far ranging as surveillance for antimicrobial-resistant foodborne pathogens, vaccine adverse events, influenza and HIV/AIDS, to communicable disease surveillance during complex emergencies in Iraq and Sudan. *Infectious Disease Surveillance* also covers the use of modern technologies to track infectious diseases, including molecular epidemiologic techniques and electronic means for data collection and distribution. Other chapters discuss evaluation of surveillance methods, ethical considerations and legal issues. The book concludes with a review of historical lessons learned from the application of surveillance in disease control—for smallpox in the 1970s and for severe acute respiratory syndrome (SARS) in 2003. A comprehensive resource to improve the tracking of infectious diseases Offers perspectives on best practices through examples of a wide variety of surveillance systems from around the globe Acts as a starting point for design of new surveillance systems Serves as an easy reference for key information Designed for frontline public health practitioners engaged in communicable disease control, epidemiologists, clinical microbiologists, and students of public health and epidemiology, this book portrays both the conceptual framework and the practical aspects of infectious disease surveillance.

This volume is an important advancement in the application of pharmacokinetic (PK) and pharmacodynamic (PO) principles to drug development. The series of topics presented deal with the application of these tools to everyday decisions that a pharmaceutical scientist encounters. The ability to integrate these topics using PK and PO methods has optimized drug development pathways in the clinic. New technologies in the areas of in vitro assays that are more predictive of human absorption and metabolism and advancement in bioanalytical assays are leading the way to minimize drug failures in later, more expensive clinical development programs. Pharmacokinetics and pharmacodynamics have become an important component understanding the drug action on the body and is becoming increasingly important in drug labeling due to its potential for predicting drug behavior in populations that may be difficult to study in adequate numbers during drug development. The ability to correlate drug exposure to

effect and model it during the drug development value chain provides valuable insight into optimizing the next steps to derive maximum information from each study. These principles and modeling techniques have resulted in an expanded and integrated view of PK and PO and have led to the expectations that we may be able to optimally design clinical trials and eventually lead us to identifying the optimal therapy for the patient, while minimizing cost and speeding up drug development. There is wide utility for the book both as a text and as a reference.

Provides critical evidenced based assessments and tools with which to investigate the role of rights abrogation in the health of populations.

This book considers the change in rhetoric surrounding the treatment of AIDS from one of crisis to that of 'ending AIDS'. Exploring what it means to 'end AIDS' and how responsibility is framed in this new discourse, the author considers the tensions generated between the individual and the state in terms of notions such as risk, responsibility and prevention. Based on analyses public health promotions in the UK and the US, HIV prevention science and engaging with the work of Foucault, this volume argues that the discourse of 'ending AIDS' implies a tension-filled space in which global principles and values may clash with localised needs, values and concerns; in which evidence-based policies strive for hegemony over local, tacit and communal regimes of knowledge; and in which desires compete with national and international ideas about what is best for the individual in the name of 'ending AIDS' writ large. As such, it will appeal to scholars of sociology and media studies with interests in the sociology of medicine and health, medical communication and health policy.

Southern African material organised for quick reference in the ward or clinic helps students and doctors inexperienced in HIV/Aids care on the spot in urban and rural settings. The book includes substantial information and guidelines on anti-retroviral therapy.

The Deep South has seen a 36 percent increase in AIDS cases while the rest of the nation has seen a 2 percent decline. Many of the underlying reasons for the disease's continued spread in the region—ignorance about HIV, reluctance to get tested, non-adherence to treatment protocols, resistance to behavioral changes—remain unaddressed by policymakers. In this extensively revised second edition, Kathryn Whetten and Brian Wells Pence present a rich discussion of twenty-five ethnographic life stories of people living with HIV in the South. Most importantly, they incorporate research from their recent quantitative study, "Coping with HIV/AIDS in the Southeast" (CHASE), which includes 611 HIV-positive patients from North Carolina, South Carolina, Georgia, Alabama, and Louisiana. This new edition continues to bring the participants' voices to life while highlighting how the CHASE study confirmed many of the themes that originally emerged from the life histories. This is the first cohesive compilation of up-to-date evidence on the unique and difficult aspects of living with HIV in the Deep South.

It is no exaggeration to say that motivational interviewing (MI) has transformed the culture of clinical practice and the way healthcare practitioners and researchers understand behavior change. MI, as an empirically supported therapeutic approach, has grown all across prevention, intervention, treatment, and research settings. Nowhere is the need to target behavior change more urgent than in people living with HIV. MI is a collaborative, person-centered clinical method that fosters a constructive practitioner-patient relationship and facilitates behavior change through eliciting and strengthening motivation for change. MI can be implemented as a stand-alone brief intervention, a prelude to treatment, or a platform for ongoing care. While MI has been shown to promote behavior change in a variety of healthcare settings and health behaviors in diverse cultures and communities, from substance use, safer sex, physical activity, medication and treatment adherence, more recently there has been an explosion of research that tailors MI to HIV care. This original and compassionate book, *Motivational Interviewing in HIV Care*, brings together researchers and healthcare practitioners who have considerably contributed to the science and clinical practice of MI in HIV care. It provides current, accessible review of the current status of the MI interventions, their clinical applications, and the evidence that supports them. *Motivational Interviewing in HIV Care* is essential reading for workers in the field of HIV, who will benefit from up-to-date research reviews and practical applications of MI across the continuum of HIV care.
