Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered. Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as “debits” and “credits”. The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do – rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage

students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of concept, and applicability of material to the real world.

'Business transfer' refers to the transfer of ownership and leadership from one or more outgoing owner-manager(s) to one or more incoming owner-manager(s). Apart from all the company's material assets, it presupposes that information, relationships, know-how and social capital are also transmitted from one to the other. While much of the research on entrepreneurship has focused on new business ventures, few studies have considered business transfers as an alternative way of embarking on entrepreneurial activities. *Business Transfers, Family Firms and Entrepreneurship* provides the international community with a more comprehensive state-of-the-art of business transfer studies, which will enrich readers' understanding. The business transfer is examined through different prisms: family businesses, internal business transfers to employees, external business transfers, and woman in business transfers. It offers a refreshing point of view on business transfers, in terms of both the process and the actors, and from both the seller's and the buyer's sides. It presents the research on all types of business transfer including internal and external transfers and will be of interest to researchers, academics, and students in the fields of entrepreneurship, small business management, family business, and strategic management. It can also be instructive for practitioners and stakeholders involved in a business transfer.
