Clear. Accurate. Current. The new twelfth edition of Financial and Managerial Accounting: A Basis for Business Decisions unites this text's long-running standard of excellence with a thorough revision reflecting contemporary concepts and issues in accounting. The managerial accounting section has been expanded making this book appropriate for the 50/50 split accounting principles courses that employ a corporate approach. The hallmarks of this text continue to be exceptional balance between the preparer and user points of view, excellent real-world examples that do not distract students from the text narrative, and clear writing style. This is a reflection of the authors and their well-known dedication to accounting education.

Copley's Essentials of Accounting for Governmental and Not-for-Profit Organizations, 13e is best suited for those professors whose objective is to provide more concise coverage than what is available in larger texts. The main focus of this text is on the preparation of external financial statements which is a challenge for governmental reporting. The approach in this edition is similar to that used in practice. Specifically, day to day events are recorded at the fund level using the basis of accounting for fund financial statements. Governmental activities are recorded using the modified accrual basis. The fund-basis statements are then used as input in the preparation of government-wide statements. The preparation of government-wide statements is presented in an Excel worksheet. NEW for the 13th edition is McGraw-Hill Connect, a digital teaching and learning environment that saves students and instructors time while improving performance over a variety of critical outcomes.

As the long-time #1 best-seller, Garrison has helped guide close to 3 million students through managerial accounting since it was first published. It identifies the three functions managers must perform within their organisations-plan operations, control activities, and make decisions-and explains what accounting information is necessary for these functions, how to collect it, and how to interpret it. Garrison's Managerial Accounting is known for its relevance, accuracy, and clarity. It is also unique in that the authors write the most important supplements that accompany the book: solutions manual, test bank, instructor's manual, and study guide - making them both of high quality and extremely consistent with the textbook.

This volume explores illusionism as a much larger phenomenon than optical illusion, magic shows, or special effects, as a vital part of how we perceive, process, and shape the world in which we live. Considering different cultural practices characterized by illusionism, this book suggests a new approach to illusion via media theory. Each of the chapters analyses a specific kind of illusionistic practice and the concept of illusionism it entails in a given context, including philosophy, perception and cognitive theory, performance magic, occultism, optics, physiology, early cinema, cartomancy, spiritualism, architecture, shamanic rituals, and theoretical physics, to show the diversity of shapes that illusionism and illusions can take. The book provides detailed analyses of illusions within performance and ritual magic, philosophy, art history and psychology as well as a first approach to the study of illusions outside of these established fields. It aims to find ways of identifying and analysing a wider range of illusions in the humanities. This multidisciplinary and comprehensive volume will appeal to

This practical introduction to second-order and growth mixture models using Mplus introduces simple and complex techniques through incremental steps. The authors extend latent growth curves to second-order growth curve and mixture models and then combine the two. To maximize understanding, each model is presented with basic structural equations, figures with associated syntax that highlight what the statistics mean, Mplus applications, and an interpretation of results. Examples from a variety of disciplines demonstrate the use of the models and exercises allow readers to test their understanding of the techniques. A comprehensive introduction to confirmatory factor analysis, latent growth curve modeling, and growth mixture modeling is provided so the book can be used by readers of various skill levels. The book's datasets are available on the web. Highlights include:

- Illustrative examples using Mplus 7.4 include conceptual figures, Mplus program syntax, and an interpretation of results to show readers how to carry out the analyses with actual data.
- Exercises with an answer key allow readers to practice the skills they learn.
- Applications to a variety of

Part 1 introduces basic structural equation modeling (SEM) as well as first- and second-order growth curve modeling. The book opens with the basic concepts from SEM, possible extensions of conventional growth curve models, and the data and measures used throughout the book. The subsequent chapters in part 1 explain the extensions. Chapter 2 introduces conventional modeling of multidimensional panel data, including confirmatory factor analysis (CFA) and growth curve modeling, and its limitations. The logical and theoretical extension of a CFA to a second-order growth curve, known as curve-of-factors model (CFM), are explained in Chapter 3. Chapter 4 illustrates the estimation and interpretation of unconditional and conditional CFMs. Chapter 5 presents the logical and theoretical extension of a parallel process model to a second-order growth curve, known as factor-of-curves model (FCM). Chapter 6 illustrates the estimation and interpretation of unconditional and conditional FCMs. Part 2 reviews growth mixture modeling including unconditional growth mixture modeling (Ch. 7) and conditional growth mixture models (Ch. 8). How to extend second-order growth curves (curve-of-factors and factor-of-curves models) to growth mixture models is highlighted in Chapter 9. Ideal as a supplement for use in graduate courses on (advanced) structural equation, multilevel, longitudinal, or latent variable modeling, latent growth curve and mixture modeling, factor analysis, multivariate statistics, or advanced quantitative techniques (methods) taught in psychology, human

emphasis on decision making, and key data analysis skills appropriate at the introductory level, students are better prepared as future professionals in today's business world.

We are pleased to present this Global Edition, which has been developed specifically to acquaint students of business with the fundamental tools of managerial accounting and to promote their understanding of the dramatic ways in which business is changing. The emphasis is on teaching students to use accounting information to best manage an organization. Each chapter is written around a realistic business or focus company that guides the reader through the topics of that chapter. There is significant coverage of contemporary topics such as activity-based costing, target costing, the value chain, customer profitability analysis, and throughput costing while also including traditional topics such as job-order costing, budgeting, and performance evaluation. Many of the real-world examples in the Management Accounting Practice boxes have been revised and updated to make them more current and several new examples have been added. This Global Edition has been adapted to meet the needs of courses outside the United States and does not align with the instructor and student resources available with the U.S. edition.
