"You can be lonely anywhere, but there is a particular flavor to the loneliness that comes from living in a city, surrounded by thousands of strangers. The Lonely City is a roving cultural history of urban loneliness, centered on the ultimate city: Manhattan, that teeming island of gneiss, concrete, and glass. What does it mean to be lonely? How do we live, if we're not intimately involved with another human being? How do we connect with other people, particularly if our sexuality or physical body is considered deviant or damaged? Does technology draw us closer together or trap us behind screens? Olivia Laing explores these questions by travelling deep into the work and lives of some of the century's most original artists, among them Andy Warhol, David Wojnarowicz, Edward Hopper, Henry Darger and Klaus Nomi. Part memoir, part biography, part dazzling work of cultural criticism, The Lonely City is not just a map, but a celebration of the state of loneliness. It's a voyage out to a strange and sometimes lovely island, adrift from the larger continent of human experience, but visited by many - millions, say - of souls"--

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for

these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

The Fifth Edition of A History of the Roman People continues to provide a comprehensive analytical survey of Roman history from its prehistoric roots in Italy and the wider Mediterranean world to the dissolution of the Roman Empire in Late Antiquity in A.D. 600. Clearly organized and highly readable, the text's narrative of major political and military events provides a chronological and conceptual framework for the social, economic, and cultural developments of the periods covered. Major topics are treated separately so that students can easily grasp key concepts and ideas.

Child Neuropsychology, Volume 2: Clinical Practice attempts to bridge the gap between neurodevelopmental theory and clinical practice with a pediatric population. The focus is on some of the more common neuropsychological disorders encountered in children, along with neuropsychological evaluation, intervention, and treatment. Comprised of 11 chapters, this volume begins with an overview of issues and perspectives in clinical child neuropsychology, followed by a discussion on neurodevelopmental learning disorders in children. The neuropsychological basis of psychiatric disorders in children are then examined, together with epilepsy and closed-head injury as well as different approaches and issues relevant to neuropsychological evaluation of children. Subsequent chapters deal with the importance of soft signs and neuropsychological screening; neuropsychological assessment of children; actuarial and clinical assessment practices; and intervention and treatment. The book also presents an overview of how one might conceptualize and integrate differential diagnosis of neurodevelopmental learning disabilities with appropriate curriculum-based intervention strategies. The final chapter considers the broader applications of behavioral neuropsychology. This book is relevant to clinical child or pediatric neuropsychologists, child or school psychologists, physicians interested in pediatric neuropsychological disorders, and other professionals who provide services to children with neurologically based disorders. It may also serve as a reference for audiologists, speech and language therapists, or educators.

Now, more than 20 years since its initial release, John Fiske's classic text *Media Matters* remains both timely and insightful as an empirically rich examination of how the fierce battle over cultural meaning is negotiated in American popular culture. *Media Matters* takes us to the heart of social inequality and the call for social justice by interrogating some of the most important issues of its time. Fiske offers a practical guide to learning how to interpret the ways that media events shape the social landscape, to contest official and taken-for-granted accounts of how events are presented/conveyed through media, and to affect social change by putting intellectual labor to public use. A new introductory essay by former Fiske student Black Hawk Hancock entitled 'Learning How to Fiske: Theorizing Cultural Literacy, Counter-History, and the Politics of Media Events in the 21st Century' explains the theoretical and methodological tools with which Fiske approaches cultural analysis, highlighting the lessons today's students can continue to draw upon in order to understand society today.

Describes the technological solutions and standards which will enable the migration of voice and SMS services over to LTE/EPC networks Main drivers for the introduction of Long Term Evolution of UTRAN (LTE) is to provide far better end user experience for mobile broadband services. However, service providers also need to have a clear strategy of how to

offer voice and messaging services for consumers and enterprises. The voice service over LTE is becoming increasingly important when the smartphone penetration is increasing rapidly. Smartphones require both good quality voice and high speed broadband data. This book provides the exhaustive view to industry-approved technologies and standards behind the Voice over LTE (VoLTE). Whether a decision maker or technology analyst, this book explains a topic of substantial global market interest. It provides a good introduction to the technology and is useful for operators who may be deploying VoLTE, product managers responsible for VoLTE products and those who work in implementation and standardization of related technologies. Provides a comprehensive overview of industry-approved technologies and standards, providing vital information for decision makers and those working on the technology Written by authors working at the cutting edge of mobile communications technology today, bringing a mix of standards and product background, guaranteeing in-depth practical and standards information Covering the technical and practical elements of VoLTE, explaining the various approaches for providing voice services over LTE

India's history and culture is ancient and dynamic, spanning back to the beginning of human civilization. Beginning with a mysterious culture along the Indus River and in farming communities in the southern lands of India, the history of India is punctuated by constant integration with migrating peoples and with the diverse cultures that surround the country. Placed in the center of Asia, history in India is a crossroads of cultures from China to Europe, as well as the most significant Asian connection with the cultures of Africa. The Historical Dictionary of Ancient India provides information ranging from the earliest Paleolithic cultures in the Indian subcontinent to 1000 CE. The ancient history of this country is related in this book through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on rulers, bureaucrats, ancient societies, religion, gods, and philosophical ideas.

We revisit Lipset's law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

The second edition of Project Management in Practice: For Certificate IV and Diploma courses builds on the strengths of the popular first edition. Closely aligned to the units of competency in the Certificate IV and Diploma of Project Management training packages, as well as the PMBOK v6 industry standards, this new edition will continue to provide guidance to students and lecturers. Project Management in Practice 2e is accompanied by a comprehensive suite of online resources that will help build and enhance the practical skills required in project management. • Includes two new chapters: The Scrum (Agile) approach and

Project integration management • New case scenarios: Snapshots from Practice • New holistic case study that supports and complements chapters in the book • End-of-chapter questions and exercises • Comprehensive instructor's resource manual • Comprehensive mapping to PMBOK v6 and to the units of the Certificate IV and Diploma of Project Management training packages • Updated PowerPoints • More supplementary resources online, including templates, appendices and additional exercises

A powerful tribute to feminist sci-fi about bicycles. It gravitates away from the unfortunately-traditional macho heroes, hurtling through space with giant guns, ready to protect and/or tame their scantily clad space babe. Elly's visions of the future are populated by strong, intelligent, empowered women with complex personalities. Heroines find meaning and freedom on two wheels in the confines of a gated space society and in the ravaged earth left behind. Racers compete in deep space and on otherworldly planets. From fantasy to hard sci-fi to dystopia, there's something for everyone in this little volume that launched a genre.

This book is unique in that it brings forth the nature and characteristics of 21st century Asian urbanization. It provides a basic framework, particularly as it relates to the patterns, characteristics and problems associated with urbanization. Urban structural models are discussed in relation to their applicability and non-applicability. It is of relevance to researchers and students working in the fields of social geography, Asian studies, urban economies, urban and regional planning and social issues.

Translations of plays by Aeschylus, Aristophanes, Euripides, Seneca, and Sophocles, analyzed and compared with plays by Racine, Corneille, and Rotrou on similar subjects.

Incorporates More Than 25 Years of Research and Experience *Railway Transportation Systems: Design, Construction and Operation* presents a comprehensive overview of railway passenger and freight transport systems, from design through to construction and operation. It covers the range of railway passenger systems, from conventional and high

speed inter-urban systems through to suburban, regional and urban ones. Moreover, it thoroughly covers freight railway systems transporting conventional loads, heavy loads and dangerous goods. For each system it provides a definition, a brief overview of its evolution and examples of good practice, the main design, construction and operational characteristics, the preconditions for its selection, and the steps required to check the feasibility of its implementation. Developed for Engineers, Designers, and Operators of Railway Systems The book also provides a general overview of issues related to safety, interface with the environment, cutting-edge technologies, and finally the techniques that govern the stability and guidance of railway vehicles on track. Contains information on the three main constituents of all railway systems: railway infrastructure, rolling stock, railway operations Provides a methodology for testing the applicability of the implementation of railway systems Offers an overview of issues related to the safety of railway systems in general Describes their interfaces with the environment, the cutting-edge technologies that are already in place as well as those that are under research, and the techniques that govern the stability and guidance of railway vehicles on track Railway Transportation Systems: Design, Construction and Operation suits students, and also those in the industry ? engineers, consultants, manufacturers, transport company executives ? who need some breadth of knowledge to guide them over the course of their careers.
