The discipline of economics has been increasingly criticized for its inability to illuminate the workings of the real world and to provide reliable policy guidance for the major economic and social challenges of our time. A central problem in contemporary economics, and a problem from which many of its other failings flow, is its lack of plurality. By a lack of plurality it is meant that contemporary economics lacks diversity in its methods, theories, epistemology and

methodology. It is also meant that economics has become far less interdisciplinary. From Economics to Political Economy offers an explanation as to why economics has become so determinedly non-pluralistic, and also gives considerable attention to exploring and evaluating promising strategies for reform. These strategies include developing a pluralist economics under the label of 'political economy' within other social science departments (such as departments of politics). Along the way the reader will learn about the worldwide student movement seeking greater pluralism in economics, encounter some dramatic case studies in intellectual suppression, gain a fuller sense of the nature of contemporary economics and explore the relationship between economics and other social sciences. This book is of interest to any social scientist, particularly those with interests in economics and politics.

The robot population is rising on Earth and other planets. (Mars is inhabited entirely by robots.) As robots slip into more domains of human life--from the operating room to the bedroom--they take on our morally important tasks and decisions, as well as create new risks from psychological to physical. This makes it all the more urgent to study their ethical, legal, and policy impacts. To help the robotics industry and broader society, we need to not only press ahead on a wide range of issues, but also identify new ones emerging as quickly as the field is evolving. For instance, where military robots had received much attention in the past (and are still controversial today), this volume looks toward autonomous cars here as an important case study that cuts across diverse issues, from liability to psychology to trust and more. And because robotics feeds into and is

fed by AI, the Internet of Things, and other cognate fields, robot ethics must also reach into those domains, too. Expanding these discussions also means listening to new voices; robot ethics is no longer the concern of a handful of scholars. Experts from different academic disciplines and geographical areas are now playing vital roles in shaping ethical, legal, and policy discussions worldwide. So, for a more complete study, the editors of this volume look beyond the usual suspects for the latest thinking. Many of the views as represented in this cutting-edge volume are provocative--but also what we need to push forward in unfamiliar territory.

When writing the preface the main work has been done. What remains is thanking all those people who directly or indirectly contributed to the out come. My thanks go to my family and friends for their encouragement towards the completion of this book. Among the academic profession, I would like to thank Prof. Dr. Dr. Harald Scherf, my academic teacher, first. During the years at Hamburg University I benefitted especially from his profound knowledge of Keynesian theory. His way of examining an argument in an unbiased way helped me a lot to carry out the reseach I wanted to do. His confidence enabled me to finish the work. A part of the book was written while I was a visiting fellow at DELTA, Paris, where I am particularly indebted to Roger Guesnerie. I have benefitted from his encouragement, advice, and gentle criticism during discussions and seminars, especially on the topic of the time structure of economic dynamics. I would like to acknowledge the hospitality and stimulating atmosphere at DELTA. Different versions of the manuscript, or parts of it have been read by Prof. Dr. Manfred Holler, Dr. Jorg Bibow and Dr. Gabriele Kasten. Their comments and suggestions were quite helpul and are gratefully acknowledged. Additionally, I have to thank Prof. Dr. M. Funke and Prof. Dr. V. Timmer mann.
