Ask Dr. Mueller captures the glamour and grittiness of Cookie Mueller's life and times. Here are previously unpublished stories - wacky as they are enlightening - along with favorites from *Walking Through Clear Water* in a Pool Painted Black and other publications. Also the best of Cookie's art columns from *Details* magazine, and the funniest of her advice columns from the *East Village Eye*, on everything from homeopathic medicine to how to cut your cocaine with a healthy substance. This collection is as much an autobiography as it is a map of downtown New York in the early '80s - that moment before *Bright Lights*, *Big City*, before the art world exploded, before New York changed into a yuppie metropolis, while it still had a glimmer of bohemian life. "A lush novel, rich with tension and intricately woven, believable characters. Myers clearly loves the Congo—and you will love this book. I did!" —Mary Alice

This book constitutes an introduction to the theory of binary switching networks (binary logic circuits) such as are encountered in industrial automatic systems, in communications networks and, more particularly, in digital computers. These logic circuits, with or without memory, (sequential circuits, combinational circuits) play an increasing part in many sectors of industry. They are, naturally, to be found in digital computers where, by means of an assembly (often complex) of elementary circuits, the functions of computation and decision which are basic to the treatment of information, are performed. In their turn these computers form the heart of an increasing number of digital systems to which they are coupled by interface units which, themselves, fulfil complex functions of information processing. Thus the digital techniques penetrate ever more deeply into industrial and scientific activities in the form of systems with varying degrees of specialization, from the wired-in device with fixed structure to those systems centered on a general-purpose programmable computer. In addition, the present possibility of mass producing microminaturised logic circuits (integrated circuits, etc.) gives a foretaste of the introduction of these techniques into the more familiar aspects of everyday life. The present work is devoted to an exposition of the algebraic techniques necessary for the study and synthesis of such logic networks. No previous knowledge of this field of activity is necessary: any technician or engineer possessing an elementary knowledge of mathematics and electronics can undertake its reading.

This collection of short stories and prose chronicles events observed by the author during her lifetime in Northern New Mexico. Family, relatives, friends and strangers (real or imaginary) are caught off guard in everyday occurrences that evoke laughter, tears, or memories of the past. The names have, of course, been changed, and much embellishment has been added to stories which may or may not be true. Stories of innocence, family dynamics, relationships and injustice combine to bring a tongue in cheek narrative to the reader. The author adds: "My inner barrio is full of observations, whether from the neighborhood where I grew up in Santa Fe or from watching ordinary people interact with each other. I try to see the humor in whatever life throws at us and hope some of these stories will bring a chuckle or a hearty laugh to anyone willing to let their guard down as they read on." Born in Santa Fe, MARIE ROMERO CASH is an award-winning folk artist/santera who has been exhibiting her colorful works for over thirty years. She is also a writer, having authored several books on Northern New Mexican culture, shrines, saints and churches including: BUILT OF EARTH AND SONG: A GUIDEBOOK TO NORTHERN NEW MEXICO'S VILLAGE CHURCHES; LIVING SHRINES: DEVOTIONAL SPACES IN NORTHERN NEW MEXICO HOMES; SANTOS, A
