The General Theory of Employment, Interest, and Money, written by legendary author John Maynard Keynes is widely considered to be one of the top 100 greatest books of all time. This masterpiece was published right after the Great Depression. It sought to bring about a revolution, commonly referred to as the 'Keynesian Revolution', in the way economists thought—especially challenging the proposition that a market economy tends naturally to restore itself to full employment on its own. Regarded widely as the cornerstone of Keynesian thought, this book challenged the established classical economics and introduced new concepts. 'The General Theory of Employment, Interest, and Money' transformed economics and changed the face of modern macroeconomics. Keynes' argument is based on the idea that the level of employment is not determined by the price of labour, but by the spending of money. It gave way to an entirely new approach where employment, inflation and the market economy are concerned.

The multilateral trading system stands at a crossroads. Despite its widely acknowledged contribution to global prosperity over the past half century, the movement toward further liberalization has increasingly been challenged. These essays by leading scholars and trade officials honor Raymond Vernon, one of the architects of the international economic institutions established following the

Second World War. The book examines several key issues at the heart of the debate over the multilateral trading system. What are the global efficiency gains from further liberalization? How can efficiency gains be maximized while respecting legitimate claims to sovereignty? Is the trading system affording an equitable distribution of benefits between countries and among various groups within societies? Does civil society have a role in the trading system? What role should the World Trade Organization and its dispute settlement procedures play in resolving disputes and enhancing legitimacy?

Future economic growth lies in the value of experiences and transformations--good and services are no longer enough. We are on the threshold, say authors Pine and Gilmore, of the Experience Economy, a new economic era in which all businesses must orchestrate memorable events for their customers. The Experience Economy offers a creative, highly original, and yet eminently practical strategy for companies to script and stage the experiences that will transform the value of what they produce. From America Online to Walt Disney, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of creating personal experiences for both consumers and businesses. The authors urge managers to look beyond traditional pricing factors like time and cost, and consider charging for the value

of the transformation that an experience offers. Goods and services, say Pine and Gilmore, are no longer enough. Experiences and transformations are the basis for future economic growth, and The Experience Economy is the script from which managers can begin to direct their own transformations.

Regional cooperation has become a distinctive feature of the Balkans, an area known for its turbulent politics. Exploring the origins and dynamics of this change, this book highlights the transformative power of the EU and other international actors.

The world economy is experiencing a very strong but uneven recovery, with many emerging market and developing economies facing obstacles to vaccination. The global outlook remains uncertain, with major risks around the path of the pandemic and the possibility of financial stress amid large debt loads. Policy makers face a difficult balancing act as they seek to nurture the recovery while safeguarding price stability and fiscal sustainability. A comprehensive set of policies will be required to promote a strong recovery that mitigates inequality and enhances environmental sustainability, ultimately putting economies on a path of green, resilient, and inclusive development. Prominent among the necessary policies are efforts to lower trade costs so that trade can once again become a robust engine of growth.

This year marks the 30th anniversary of the Global Economic Prospects. The Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing economies, on a semiannual basis (in January and June). Each edition includes analytical pieces on topical policy challenges faced by these economies.

This book results from a conference held in Singapore in September 2009 that brought together distinguished lawyers and economists to examine the differences and similarities in the intersection between intellectual property and competition laws in Asia. The prime focus was how best to balance these laws to improve economic welfare. Countries in Asia have different levels of development and experience with intellectual property and competition laws. Japan has the longest experience and now vigorously enforces both competition and intellectual property laws. Most other countries in Asia have only recently introduced intellectual property laws (due to the Trade-Related Aspects of Intellectual Property Rights (TRIPS) Agreement) and competition laws (sometimes due to the World Bank, International Monetary Fund or free trade agreements). It would be naïve to think that laws, even if similar on the surface, have the same goals or can be enforced similarly. Countries have differing degrees of acceptance of these laws, different economic circumstances and differing legal and political institutions. To set the scene, Judge Doug Ginsburg, Greg Sidak, David Teece and Bill Kovacic look at the intersection of intellectual property and competition laws in the United States. Next are country chapters on Asia, each jointly authored by a lawyer and an economist. The country chapters outline the institutional background to the intersection in each country, discuss the policy underpinnings (theoretically as well as describing actual policy initiatives),

With the ascendancy of the Coalition government in 1996 there was a marked shift of emphasis directed to deepening Australia's relations with America. The Coalition government strategically linked security and economic well-being and this linking was contextualized by threats both internal and external. By deepening the relationship of the US alliance in foreign, trade and defence policies, the Australian government sought to resonate on inherited and conservative perceptions of threat in the domestic environment. Maryanne Kelton introduces specific cases to demonstrate both the intensity and complexity of dealing with the US.

Through these empirical studies the government's approach is examined across trade, security and industry sectors. The book adds to the current debate as it provides an explanatory framework for understanding the Australian government's choices in its relations with the USA across the broader spectrum of security issues.

Corporate Governance and Accountability, 2nd Edition is written to provide readers with an up-to-date summary of both theory and practice in the area. The new edition incorporates the most recent events in worldwide corporate governance, as well as a summary of the most recent academic and professional literature. The book also brings together issues of financial performance, boardroom mechanics, the role of institutional shareholders, and corporate social responsibility into an international appraisal of current corporate governance theory and practice.

As the world evolves in increasingly unpredictable directions, one of the key

determinants of the future global order will surely be the impact of China. No country and no society can escape China's reach-indeed many seek its embrace. China brings benefits to many-but it's also a problematic interlocutor for others. In *China and the World*, one of the world's leading China specialists David Shambaugh has assembled fifteen leading international authorities on China to create the most comprehensive and up-to-date scholarly assessment of China's foreign relations and roles in international affairs. The volume covers China's contemporary position in all regions of the world, with all major powers, and across multiple arenas of China's international interactions. It also explores the sources of China's grand strategy, how the past shapes the present, and the impact of domestic factors that shape China's external behavior. *China and the World* is a uniquely focused and well-organized volume that provides many insights into China's calculations and behavior, and identifies a number of challenges China will face in the future.

How can the EU's community of welfare states adapt their public policies to economic globalization? What happens when the economic and social aims of the EU come into conflict? This book examines the developing legal regimes and regulation of public services in the UK and other European countries. Public services are examined through a case-study of the complex area of public

employment services. These are job-placement and vocational training services which aim to maximize employment and minimize unemployment within EU member States' Active Labour Market policies. Employment services are at the centre of a complex web of rules in both hard and soft forms of law deriving from the EU, national public law and from private, and at times contractual, agreements. They also lie at the crossroads of a series of trends in regulation, and priorities have been inspired by an array of conflicting policy rationales. These policy rationales include the establishment of an open and competitive European internal market, the establishment of an efficient welfare state, the scaling down of state administrative machinery, the fulfilment of core public service responsibilities, and the creation of public-private partnerships. Public employment services provide a highly informative and novel case study of the interaction and conflict between the economic and social aims of the EU and between regulation at national and supranational levels, and the changing forms which this regulation has taken.

core economic themes, rather than concepts unique to the health care economy. This edition contains revised and updated data tables, where applicable. The advent of the Patient Protection and Affordable Care Act (PPACA) in 2010 has also led to changes in many chapters , most notably in the organization and focus of Chapter 16.

Essays by leading academics, policymakers, and industrialists examine India's economic success in the late 1990s. India's economy over the last decade looks in many ways like a success story; after a major economic crisis in 1991, followed by bold reform measures, the economy has experienced a rapid economic growth rate, more foreign investment, and a boom in the information technology sector. Yet many in the country still suffer from crushing poverty, and social and political unrest remains a problem. These essays by leading academics, policymakers, and industrialists -- including one by Amartya Sen, the 1998 winner of the Nobel Prize in economics for his work on poverty and inequality -- examine the facts of India's recent economic successes and their social and cultural context. India's rate of economic growth after the 1991 reforms were instituted reached a remarkable 7 percent for three consecutive years, from 1994 to 1997. Several contributors to India's Emerging Economy ask what this means for the nation as a whole. In his essay "Democracy and Secularism in

India," Amartya Sen argues that economic progress is not the only way to measure a nation's performance. Other essays examine the actual effect India's economic growth has had on reducing poverty and recommend policies to empower the poor. Essays also address such issues as globalization and the vulnerabilities and opportunities it creates, India's experience with monetary and fiscal reform, the rapid growth of the information technology sector (including a case study of India's software industry), and India's grassroots economy. This anthology discusses important issues surrounding environmental law and economics and provides an in-depth analysis of its use in legislation, regulation and legal adjudication from a neoclassical and behavioural law and economics perspective. Environmental issues raise a vast range of legal questions: to what extent is it justifiable to rely on markets and continued technological innovation, especially as it relates to present exploitation of scarce resources? Or is it necessary for the state to intervene? Regulatory instruments are available to create and maintain a more sustainable society: command and control regulations, restraints, Pigovian taxes, emission certificates, nudging policies, etc. If regulation in a certain legal field is necessary, which policies and methods will most effectively spur sustainable consumption and production in order to protect the environment while mitigating any potential negative impact on

economic development? Since the related problems are often caused by scarcity of resources, economic analysis of law can offer remarkable insights for their resolution. Part I underlines the foundations of environmental law and economics. Part II analyses the effectiveness of economic instruments and regulations in environmental law. Part III is dedicated to the problems of climate change. Finally, Part IV focuses on tort and criminal law. The twenty-one chapters in this volume deliver insights into the multifaceted debate surrounding the use of economic instruments in environmental regulation in Europe.

Scholars in the Marketplace is a case study of market-based reforms at Uganda's Makerere University. With the World Bank heralding neoliberal reform at Makerere as the model for the transformation of higher education in Africa, it has implications for the whole continent. At the global level, the Makerere case exemplifies the fate of public universities in a market-oriented and capital friendly era. The Makerere reform began in the 1990s and was based on the premise that higher education is more of a private than a public good. Instead of pitting the public against the private, and the state against the market, this book shifts the terms of the debate toward a third alternative than explores different relations between the two. The book distinguishes between privatisation and commercialisation, two processes that drove the Makerere reform. It argues that

whereas privatisation (the entry of privately sponsored students) is compatible with a public university where priorities are publicly set, commercialisation (financial and administrative autonomy for each faculty to design a market-responsive curriculum) inevitably leads to a market determination of priorities in a public university. The book warns against commercialisation of public universities as the subversion of public institutions for private purposes.

Australians have become increasingly visible outside of the country as speakers and actors in radio and television, their media moguls have frequently bought up foreign companies, and people around the world have been able to enjoy such Australian productions as *The Flying Doctors*, *Neighbours*, and *Kath and Kim*. The origins, early development, and later adaptations of radio and television show how Australia has gone from being a minor and rather parochial player to being a significant part of the international scene. *The A to Z of Australian Radio and Television* provides essential facts and information concerning the Australian radio and television industry. This is accomplished through the use of a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on directors, producers, writers, actors, television and radio series, and television and radio stations.

This collection of papers brings together the lessons learned from New Zealand's Commerce Act 1986 and its principal subsequent amendments. Providing concise analysis of those amendments, and of topics relating to the original Commerce Act, it pays particular attention to the introduction of economic regulation into the electricity and telecommunication markets. This volume outlines the impact of the Ministry of Economic Development on the effectiveness of the Commerce Act, international perspectives on competition law and methods for administering penalties in competition law cases.

World-wide losses of crops, post-harvest, through microbial action, pests, diseases and other types of spoilage amount to millions of tons every year. This essential handbook is the first in a three-volume series which covers all factors affecting post-harvest quality of all major fruits, vegetables, cereals and other crops. Compiled by members of the world-renowned Natural Resources Institute at the University of Greenwich, Chatham, UK,

the comprehensive contents of this landmark publication encourage interactions between each sector of the agricultural community in order to improve food security, food safety and food quality in today's global atmosphere. Through the carefully compiled and edited chapters, internationally respected authors discuss ways to improve harvest yield and quality, drawing on their many years' practical experience and the latest research findings, applications and methodologies. Subjects covered include: an introduction to the systems used in post-harvest agricultural processes, physical and biological factors affecting post-harvest commodities, storage issues, pest management, food processing and preservation, food systems, the latest research and assimilation of this work, and current trade and international agreements. An invaluable glossary showing important pests, pathogens and plants is also included. *Crop Post-Harvest: Science and Technology Volume 1: Principles and Practice* is a must-have reference book which offers the reader an overview of the globalisation of post-harvest science, technology, economics, and the development of the storage and handling of perishable and durable products. Volumes 2 and 3 will go on to explore durables and perishables individually in more detail, with many case studies taken from around the globe. This 3-volume work is the standard handbook and reference for all professionals involved in the harvesting, shipping, storage and processing of crops, including agricultural and plant scientists, food scientists and technologists, microbiologists, plant pathologists, entomologists and all post harvest, shipping and storage consultants. This book examines the circumstances under which a company needs restructuring, and for which companies that would be possible given the nature of the corporation and the economic viability. It discusses the criteria for judging whether a reorganization has been a success. Bork considers the legal mechanisms involved in restructuring including the extent to which the law provides the rules for a moratorium and the rights creditors may exercise over the debtor's assets. It also tackles the legal processes and how a reorganization can be commenced. The book includes analysis of the role of management and the partners or shareholders and the extent to which either legal system assigns the decision-making powers to the right persons. It considers how each regime deals with the assets involved and whether there are rules to reverse payments made during the crisis and the possibility of a set-off claim. Other aspects considered

include special rules for terminating or modifying disadvantageous contracts including contracts of employment, and costs of restructuring procedures under given legal conditions. Providing a thorough consideration of the extent to which English and German company law (including the proposed changes to German law) enhances or limits the prospects of businesses seeking to reorganize, this work offers a valuable reference source for practitioners advising companies on where to base their restructuring and gives scholars further research material concerning the remaining issues in English and German restructuring law.
