This book, Teaching Learners with Visual Impairment, focuses on holistic support to learners with visual impairment in and beyond the classroom and school context. Special attention is given to classroom practice, learning support, curriculum differentiation and assessment practices, to mention but a few areas of focus covered in the book. In this manner, this book makes a significant contribution to the existing body of knowledge on the implementation of inclusive education policy with learners affected by visual impairment.

Trust-Based Observations teaches observers to build trusting relationships with teachers as they engage in frequent observations and reflective conversations with them. Using the manageable observation form and data driven goal setting, the result is teachers embrace risk-taking and take growth steps necessary for significant teaching improvement.--Matthew O'Leary, author of Classroom Observation: A Guide to the Effective Observation of Teaching and Learning and Reclaiming Lesson Observation: Supporting Excellence in Teacher Learning

This book uses an in-depth, phenomenological interview approach to explain the generational characteristics of today's Chinese university youths and the critical dispositions they believe indispensable in acquiring English as an academic language in and outside school settings. By presenting the authentic voices of the recruited participants, the book clarifies how English for academic purposes (EAP), as an emerging global phenomenon and a research-informed practice, enables and empowers them for conscious self-transformation and critical awareness development through language study. The book also explores issues arising in the fields of general English language teaching as well as traditional and critical EAP, and discusses university English language learners' learning needs and rights. The book further promotes a dynamic and transformative University EAP pedagogy of particularity, practicality, and possibility moving from the oppression of language education to its liberation, and the increasing critical consciousness among the present and future university youths in a time of great social changes.

learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do--with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

“Make sure your students follow your instructions.” That sounds like a straightforward instruction, but in fact, it’s fairly abstract. What does a teacher actually have to do to make sure students are following? Even the leader delivering this direction may not know, and the first-year teacher almost certainly doesn’t. The vast majority of teachers are only observed one or two times per year on average—and even among those who are observed, scarcely any are given feedback as to how they could improve. The bottom line is clear: teachers do not need to be evaluated so much as they need to be developed and coached. In *Get Better Faster: A 90-Day Plan for Coaching New Teachers*, Paul Bambrick-Santoyo shares instructive tools of how school leaders can effectively guide new teachers to success. Over the course of the book, we break down the most critical actions leaders and teachers must enact to achieve exemplary results. Designed for coaches as well as beginning teachers, *Get Better Faster* is an integral coaching tool for any school leader eager to help their teachers succeed. It’s the book’s focus on the actionable—the practice-able—that drives effective coaching. By practicing the concrete actions and micro-skills listed here, teachers will markedly improve their ability to lead a class, producing a steady chain reaction of future teaching success. Though focused heavily on the first 90 days of teacher development, it’s possible to implement this work at any time.
