Thinking Government renews a discussion of power relations between elected politicians and unelected public servants, while also incorporating the practical approach of studying public administration within the dynamics of federal politics. Notable for its use of real document examples drawn from actual healthcare settings, in addition to its central section's extended focus on narrative medicine and new media writing, *Healthcare Writing: A Practical Guide to Professional Success* provides a wide-ranging, much-needed contemporary perspective on the modes and contexts of writing most pertinent to today's healthcare professionals. Aimed at students enrolled in university- or college-level healthcare programs, healthcare communication specialists, as well as at current clinical practitioners seeking a portable reference and guide, this book combines a detailed discussion of approaches to key healthcare document types—both professional and academic—with a thorough but accessible overview of essential points of grammar, punctuation, and style.

With poverty, unemployment, and one-parent families on the rise in most Western democracies, government assistance presents an increasingly urgent and complex problem. This is the first study to explore Canada's family policies in

an international context. Maureen Baker looks at the successes and failures of social programs in other countries in search of solutions that might work in Canada. Baker has chosen seven industrialized countries for her comparative study: Australia, France, Germany, The Netherlands, Sweden, the United Kingdom, and the United States. These countries experience social and economic strains similar to those felt in Canada, and though they share certain policy solutions, major differences in policy remain. Baker considers which of the policies in these countries are most effective in reducing poverty, enhancing family life, and improving the status of women, then applies her findings to the Canadian situation. Bringing together research and statistics from the fields of demography, political science, economics, sociology, women's studies, and social policy, this rich, multidisciplinary study provides a unique resource for anyone interested in Canadian family policy.

We see the face of the Virgin Mary staring up at us from a grilled cheese sandwich and sell the uneaten portion of our meal for \$37,000 on eBay. While science offers a wealth of rational explanations for natural phenomena, we often prefer to embrace the fantasies that reassured our distant ancestors. And we'll even go to war to protect our delusions against those who do not share them. These are examples of what evolutionary psychologist Hank Davis calls

Caveman Logic. Although some examples are funny, the condition itself is no laughing matter. In this engagingly written book, Davis encourages us to transcend the mental default settings and tribal loyalties that worked well for our ancestors back in the Pleistocene age. Davis laments a modern world in which more people believe in ESP, ghosts, and angels than in evolution. Superstition and religion get particularly critical treatment, although Davis argues that religion, itself, is not the problem but an inevitable by-product of how our minds misperform. Davis argues, It's time to move beyond the one-size-fits-all, safety and comfort-oriented settings that got our ancestors through the terrifying Pleistocene night. In contrast, Davis advocates a world in which spirituality is viewed as a dangerous rather than an admirable quality, and suggests ways in which we can overcome our innate predisposition toward irrationality. He concludes by pointing out that biology is not destiny. Just as some of us succeed in watching our diets, resisting violent impulses, and engaging in unselfish behavior, we can learn to use critical thinking and the insights of science to guide individual effort and social action in the service of our whole species. Hank Davis (Guelph, Ontario, Canada) is an award-winning professor of psychology who teaches at the University of Guelph. He is the author of several books and more than one hundred scientific papers.

Networked learning communities: A powerful school improvement strategy for school leaders! Drawing on their work with schools in North America and England, the authors demonstrate how linking professional learning communities across school or district boundaries creates networked learning communities (NLCs) that can share professional knowledge. This resource examines: Collaborative inquiry as a process that challenges teachers' thinking, generates new learning, and fosters trusting relationships Formal and informal leadership roles in NLCs How NLCs support systematic data analysis and accountability

Roasting Chestnuts: The Mythology of Maritime Political Culture is a book about outdated political stereotypes. The Maritime provinces of New Brunswick, Prince Edward Island, and Nova Scotia are often regarded as pre-modern hinterland in which corrupt practices and traditional loyalties continue to predominate. While this depiction of Maritime political life may, at one time, have been largely accurate, this is no longer the case. Employing a variety of

indicators, this book argues that a new set of political images is needed to capture Maritime political reality today. What emerges from the analysis is a picture of Maritime politics which no longer differs markedly from that which exists in the rest of Canada. Maritimers no longer exhibit remarkably low levels of political trust and efficacy, nor is there a regional political culture which transcends provincial boundaries. In fact, Maritime political elites have been innovators, providing radical departures from Canadian political norms. A unique and innovative study, *Roasting Chestnuts* seeks to demystify Maritime politics and expose the flimsy basis for many of the region's lasting political stereotypes.

Even though project-management researchers have become increasingly interested in factors that may have an impact on project-management effectiveness, their efforts fall short of addressing the "human factor." And, unfortunately, many project-management scholars are largely unaware of the I/O psychology literature--relying, for example, on outdated models of motivation and team development. On the other side, I/O psychologists who research groups and teams often ignore the contextual influences--such as business sector, project type, placement in the organizational hierarchy, and project phase and maturity--that have a crucial impact on how a project will unfold. In this volume, a cross-disciplinary set of editors will bring together perspectives from leading I/O psychology and project-management scholars.

The relationship between ports and governments has changed profoundly over the past quarter of a century. Many governments have sought to extract themselves from the business of port operations and, in many cases, the provision of port services has devolved to local governments, communities or private management and administration. As such devolution implies a change in governance model, this trend raises questions about consequent performance. This issue examines the changed port management environment, focusing particularly on government policies such as devolution, regulatory reform and newly imposed governance models, all of which have exerted a significant influence over the nature of that changed environment. The issue

is structured so as to first explore the devolution and port reform approaches for 14 countries or regions, before examining how ports are governed and what the choice of governance might mean for their performance. Part I introduces the issue, and provides a framework for defining the basic concepts involved in devolution; it paints a picture of the current port environment, its likely future evolution and the expected impact this will have on the functioning of ports. Part II examines the port industry in 14 countries or administrations, and presents the thinking behind any devolution programs that have been implemented. Part III focuses on port governance and devolution generally, and examines governance from both strategic management and economics perspectives, including topics such as governance models, supranational governance and stakeholder conflict. Part IV examines the measurement of port performance and closes by providing conclusions and a future research agenda. This issue will be of interest to port managers, government officials and academics alike. *Examines the relationship between ports and governments with a focus on devolution *Divided into sections that provide an overview, evaluate the port industry, discuss port governance, and suggest new measures of port performance *14 countries or regions are addressed

McGraw-Hill requested not only Canadian regions to be illustrated in the text materials but also, Canadian language and spelling, Canadian themes, and most important Canadian metric units applied throughout the text. Now in its 2nd edition, 2011, the Bluman/Mayer *Elementary Statistics* text has been adopted in many colleges and universities across Canada. Since 1979, he has been an instructor at SAIT and currently, works for the Centre for Academic Learner Services.

"The World of Child Labor" details both the current and historical state of child labor in each region of the world, focusing on its causes, consequences, and cures. Child labor remains a problem of immense social and economic proportions throughout the developing world, and there is a global movement underway to do away with it. Volume editor Hugh D. Hindman has assembled an international team of leading child labor scholars, researchers, policy-makers, and activists to provide a comprehensive reference with over 220 essays. This volume first provides a current global snapshot with overview essays on the dimensions of the problem and those institutions and organizations combating child labor. Thereafter the organization of the work is regional, covering developed, developing, and less developed regions of the world. The reference goes around the globe to document the contemporary and historical state of child labor within each major region (Africa, Latin and South America, North America, Europe, Middle East, Asia, and Oceania) including country-level accounts for nearly half of the world's nations. Country-level essays for more developed nations include historical material in addition to current issues in child labor. All country-level essays address specific facets of child labor problems, such as industries and occupations in which children commonly work, the national child

welfare policy, occupational safety regulations, educational system, and laws, and often highlight significant initiatives against child labor. Current statistical data accompany most country-level essays that include ratifications to UN and ILO conventions, the Human Development Index, human capital indicators, economic indicators, and national child labor surveys conducted by the Statistical Information and Monitoring Program on Child Labor. "The World of Child Labor" is designed to be a self-contained, comprehensive reference for high school, college, and professional researchers. Maps, photos, figures, tables, references, and index are included.
